

Clz(Exit Windows)  
Created By Ferret SoftWare

Clz, was created to simplify ending your Windows session. Since it stays on top in any program, you may end your session at anytime.

Place **CLZ.EXE** in your **Windows** directory, along with **VBRUN200.DLL**,(available on most BBS's, for free).

By opening your **WIN.INI** file and placing **CLZ.EXE** in the line marked **RUN=** , Clz will load and run during all your Windows sessions. It will stay on top in any program. A single click will shut down Windows.

```
[windows]
spooler=yes
load=
run=clz.exe
Beep=yes
NullPort=None
BorderWidth=3
CursorBlinkRate=290
DoubleClickSpeed=484
Programs=com exe bat pif
Documents=
DeviceNotSelectedTimeout=15
TransmissionRetryTimeout=45
```

Remember when changing your **WIN.INI** file, not to convert it to any other format. Simply add the **CLZ.EXE** statement, and **SAVE** the file in it's native format.

If you find it useful after 30 days, simply send \$5 to the address below. I will send you a copy that eliminates the nag screen and any updates that may come along.
