

# INDEX

Some menu options and/or sub-menu options may be dimmed (grayed) if the option is not legal or unavailable (such as a nonsensical command, not yet implemented, etc.) See File for an example of a dimmed item.

The above facsimile of the TREEVIEW main menu can be used to navigate through the TREEVIEW help menu by clicking on a menu option.

Doing so, will present a facsimile of a sub-menu to that option.

As in the case of the main menu, clicking items in sub-menu facsimiles, will take you to either other sub-menus, or topics relative to the sub-menu item selected.

If a vertical scroll bar is visible to the right of the tree:

1. The up and down arrow keys can be used to move the display down or up one line, respectively.

2. The Page Up and Page Down keys will move the display down and up one screen, respectively.
3. The Home and End keys will move to the first line of the structure or the last line of the structure, respectively.

If a horizontal scroll bar is visible at the bottom of the tree the right and left arrow keys will move the tree structure right and left by one directory level, respectively.

Some menu options and/or sub-menu options may be dimmed (grayed) if the option is not legal or unavailable (such as a nonsensical command, not yet implemented, etc.) See [File](#) for an example of a dimmed item.

This option allows the current directory tree structure to be saved to disk in a file named "TV.DIR" which is stored in the root directory of the current drive.

By saving your structure, TREEVIEW does not have to scan the disk for the directory structure each time it is loaded.

If the structure is changed by some other means, by adding or deleting directories, the [Drive|Reread Drive](#) option should be executed to pick up the changes and this option again selected to save the new structure to the "TV.DIR" file.

If you want TREEVIEW to scan the directory each time it is loaded, or each time a new drive is selected using the Drive|Log to New Drive option, you should insure that the "\TV.DIR" of the target drive is deleted and that the structure is not saved using this option.

Some menu options and/or sub-menu options may be dimmed (grayed) if the option is not legal or unavailable (such as a nonsensical command, not yet implemented, etc.) See [File](#) for an example of a dimmed item.

The File|Print option permits printing of the directory tree structure to your line printer.

The standard printer dialog box is presented permitting selection of the desired options and actions. Although the collate check box is enabled, no collating of multiple copies is performed.

Printer setup can be accomplished from this dialog box (by invoking another dialog box) or the [File|Print Setup](#) option may be selected prior to selecting the File|Print option.

If the CANCEL button is not executed when the dialog box closes,

the program displays a "printing" dialog box which contains a cancel button. While this dialog box is displayed, executing the cancel button will terminate the printing process.

# REGISTRATION

Registration Form

Registration Form

Registration Form

Registration Form

Registration Form

Registration Form

This product is a disk directory structure viewer program (named **TREEVIEW**) designed to run under Windows 3.1. It is currently being released under the **SHAREWARE** concept. However, it is anticipated that the product will soon be available as a commercial item - selling at a much greater price than the registration amount asked for under the **SHAREWARE** concept. At that time, the product will no longer be available as **SHAREWARE**.

Although not completely functional at this release (primarily in the implementation of the print command and some of the planned future enhancements), as development continues, and until the print option is fully implemented, **SHAREWARE** registered users, will be notified of any significant updates which can be purchased for the fee specified on the registration form to cover the cost of the computer media and shipping and handling costs.

Additionally, fully registered users (those who have purchased the **TREEVIEW** computer media prior to the release date of the first commercially available product) will have the opportunity to

purchase the first commercially released version for the additional cost of twice the computer media fee shown on the registration form to cover the cost of the media, shipping and handling, and additional database management costs. This is a one time offer and will not be valid for subsequent commercial releases of the **TREEVIEW** software.

**TREEVIEW** is currently distributed under the **SHAREWARE** marketing concept. It is not free software and it has not been released to the public domain. If the program doesn't meet your needs, you're under no obligation to pay for it. However, you are not licensed to use the software under the copyright laws until it is registered with the copyright holder.

If you find **TREEVIEW** to be a useful addition to your software library, you must become a registered user by sending the registration fee shown on the registration form (registration only) or a FULLY registered user by sending the registration fee and latest **TREEVIEW** shareware version on disk media cost (both shown on the registration form) to the address shown on the form.

Be sure to include your name and address. Also, indicate which version of **TREEVIEW** you are currently using. Use the Help|About option from the program's Help Menu to determine the version you currently have.

Individuals who become fully registered users by submitting the registration fee and media cost (registration with disk, 3-1/2", high density, 1.44Mb, or 5-1/4" high density, 1.2Mb) will receive the latest version of **TREEVIEW** on disk media. Please specify 3-1/2" or 5-1/4" diskettes.

You can click on the topic Registration Form or this button

Registration Form

to access a form that can be printed and mailed in with your registration fee or to determine current registration and media costs.

The **SHAREWARE** marketing concept can work **ONLY** if you do

your *SHARE* in supporting the authors of such software by registering your copy of their packages. Keep **SHAREWARE** alive by registering your copy of *TREEVIEW* immediately!

***THANK YOU FOR YOUR SUPPORT!***

# USING TREEVIEW HELP

For information on using Help, or to find out about moving, scrolling, or sizing windows, press F1 from within any **TREEVIEW** Help window. This will take you to the Microsoft Windows Index to Using Help. From there, you can get to Help topics within Microsoft's Help file.

When you want to return to **TREEVIEW** Help, close the Windows Help window and choose the desired topic from the **TREEVIEW** Help menu.

From within the **TREEVIEW** help system, you can find help in the following ways:

## Help Search

1. Choose the Search button (Alt+S) from the top of the Help window (just below the menu bar).
2. In the Help Search dialog box, under Search For, type in the term you want Help for.  
If the term is indexed in the Help, you will go to that term in the upper list box.  
If the term is not indexed, you will go to the closest lexical

match instead.

3. Press Enter or choose the dialog's Search button. You will see a list of 1 or more Help topics in the Topics Found list box.
4. Scroll through the list to find a specific topic, then press Enter or choose the Go To button to jump to that Help topic.

#### Help Index

1. Go to the Help Index and choose the category that best describes the term of interest.
2. Then traverse Help links through the topics until you find what you are looking for. If the term is documented in the Help system, you should be able to find it within 4 or 5 topics.

CSS specializes in DOS and Windows application development. Services are also available for tutoring, training and consultation on various computer related matters.

Send for our resume' and brochure to the above address.

**SHAREWARE**

Shareware is a way of distributing computer software that allows you to try out a program before you purchase it.

**REGISTERED USER**

A person who submits the shareware registration fee to the copyright holder, but does not purchase the latest version of the product available on computer media as described in the registration topic of this help file.

**FULLY REGISTERED USER**

A person who submits the shareware registration fee to the copyright holder AND purchases the latest version of the product on computer media as described in the registration topic of this help file.

## **MENUS**

Generally, menus appear in the program as a menu bar across the top of the display or as pop up menus which are displayed as a result of selecting an item from the menu bar. Several tiers of menus may be available to the user. A menu item suffixed with a right pointing triangle indicates another pop-up menu will be displayed when the item is chosen, while ellipses (...) indicate a dialog box results from it's selection.

## **DIALOG BOX**

A dialog box is a pop up window that permits the user to supply additional information required by the program. The dialog box can contain edit boxes, list boxes, push buttons, radio buttons and other controls designed to assist in the input of data to the application.

**OK**

Clicking or selecting this button in a dialog box, accepts the data displayed by the dialog box. This may be the default values or values typed/selected by the user.

**CANCEL**

Clicking or selecting this button in a dialog box, rejects any changes that might have been made by the user prior to selecting cancel.

**DESCRIPTION**

The description usually indicates whether a group (tagged) files or a single file whose name is displayed is to be operated on.

**EDIT BOX**

An edit box permits entry and editing of data using the backspace and arrow keys.

**LIST BOX**

A list box contains a list of items which can be selected and the list scrolled using scroll bars.

**PUSH BUTTON**

A push button is activated by clicking on the button, or selecting it and then depressing the <ENTER> key. The button gives the illusion of being depressed when the left mouse button is held down.

## **RADIO BUTTON**

A radio button generally is used in groups. Each button in a group is exclusive to the other buttons in the group when selected. In **TREEVIEW**, radio buttons are raised diamond shaped symbols which have a black diamond in the center when it is selected.

## **ATTRIBUTE BYTE**

The file attribute byte indicates the attributes of the file (Volume Label, Directory, Archive, Read Only, System, or Hidden). These bits can be in any combination, however only certain ones make sense). **TREEVIEW** can change these attributes (except the Volume Label (not displayed) and Directory bits) with the use of the File|Set File Attributes menu option.

**ARCHIVE**

The archive bit of the file attribute byte is set whenever a file has been updated by copying to it, or updating it in its normal usage. Usually, the archive bit is reset during a "backup" operation.

**HIDDEN**

The hidden bit of the file attribute byte indicates that the file will be hidden from view when doing a directory listing with the DOS command.

**READ ONLY**

The read only bit of the file attribute byte, when set, will permit reading of the file only. Any attempt to write to a file so flagged will result in an error message.

**SYSTEM**

When the system bit of the file attribute byte is set, the file is generally used by the system. IO.SYS is a file so flagged, for example.

**BACKUP**

Backup is the operation of archiving files to another location for safe keeping. This is usually accomplished by some software designed for the purpose (such as DOS's BACKUP command, or a tape archiving program), which reset the archive bit to indicate it has been archived.

**MASK**

A name used to match against the items in the list. This mask normally contains DOS wildcard characters (\* and \$).

**WILDCARDS**

Symbols used by DOS to be replaced by the actual characters in a file name field.

**PATH SPEC**

The path spec (path specification) is the full DOS specification, identifying the location, including drive (optionally), and sub-directories of the file.

**DOS**

An acronym for Disk Operating System, i.e. MSDOS stands for MicroSoft Disk Operating Systems. Windows is a DOS of sorts, but still relies on the underlying DOS for most file operations.

**SCROLLBAR**

A bar that appears at the right side and/or bottom of some windows and in some dialog boxes. The scroll bar contains a scroll arrow at either end and a scroll box that moves within the scroll bar, reflecting your position in a file. Mouse users click the arrows or drag the scroll box to move forward or backward through the document or list. Keyboard users use the direction keys to accomplish the same thing.
