Win Multiple Configurations

JRE Enterprises presents Win Multiple Configurations for Windows 3.1.
Win Multiple Configurations will allow you to save and use up to eight different desktops.   This includes having different SYSTEM.INI and WIN.INI configurations.   Create desktops specific for your children, husband, wife and/or co-worker(s).   Also, password protect any or all saved configuration entries -- a good way to protect against accidental access to certain applications and/or critical data.

Win Multiple Configurations is coded using Microsoft Visual Basic and Microsoft Professional ToolKit for Visual Basic.

Becoming a Registered User

We thank you for giving Win Multiple Configurations a test drive.   Registration is easy and it ensures that we at JRE Enterprises can continue to develop low cost, quality applications for Windows.   When you register, you will be sent a registration number that will stop the annoying "Unregistered Software" message.   Included in the HELP system is the registration form and license agreement containing all the information you need to make your purchasing decision.

The License Agreement and Registration Form can printed when viewed by choosing *File* from the HELP menu, then choose *Print Topic*.

License Agreement

Installation of Win Multiple Configurations on your computer system implies agreement with the terms and conditions below.

Distribution of Win Multiple Configurations, its accompanying programs and documentation is considered as is.   JRE Enterprises offers no warranties of any kind, expressed or implied.   This includes, but is in no way limited to, warranties of
Win Multiple Configurations merchant ability or fitness for a particular purpose.   Under no circumstances will JRE Enterprises be liable for any damages which result from the use of this program or the inability to use it.   Exclusion from liability includes, but is not limited to, lost profits, lost savings, or any other incidental or consequential damages.

Win Multiple Configurations is distributed as Shareware.   It is not free, freeware, or in the public domain.   You may use Win Multiple Configurations for a trial period of thirty days, at no cost to you, to determine if it fits your needs. If you decide to use
Win Multiple Configurations past the thirty day trial period, you must register and pay the applicable registration fee.   Individual copies of the unregistered version of
Win Multiple Configurations may be given to friends and associates for the same thirty day free trial period.   You may also upload Win Multiple Configurations to the public section of a public BBS.

You may not modify or disassemble Win Multiple Configurations, nor distribute any modified or disassembled versions of Win Multiple Configurations.
Win Multiple Configurations may not be included with any other product without written permission from JRE Enterprises.

Registration of Win Multiple Configurations (the "SOFTWARE") permits you to use the "SOFTWARE" on a single computer.   The "SOFTWARE" is in "use" on a computer when it is loaded into temporary memory (i.e., RAM) or installed into permanent memory (e.g., hard disk, CD-ROM, or other storage device) of that computer.   However, installation on a network server for the sole purpose of internal distribution shall not constitute "use" for which separate license is required, provided you have a separate license for each computer to which the "SOFTWARE" is distributed.   You may make backup copies of Win Multiple Configurations as necessary for archival purposes only.

U.S. Government RESTRICTED RIGHTS: Use, duplication, or disclosure by the Government is subject to restrictions as set forth in subdivision (b)(3)(ii) of the Rights in Technical Data and Computer Software clause at 252.227-7013.

Changing the Active Entry Color

To change the Active Entry color from its default of yellow, do the following:
        Edit "JREWMC.INI" in the WMC directory   -- this can be done using Notepad
        Add "Hibcolor=????" somewhere after the [Win_Multi_Config] line
        ???? stands for one of these values:
                Black
                Red
                Green
                Yellow
                Blue
                Magenta
                Cyan
                White
        Any other value for ???? will cause the default color of yellow to be used.
        Save "JREWMC.INI" and run WMCSAVE or 'WMCSTRT to see the new color.

Known Problems

An "Invalid File Format" error may occur when starting WMCSAVE.EXE.   Certain older versions of the following files are incompatable with Visual Basic Version 2.0:
      CMDIALOG.VBX
      COMMDLG.DLL
These files are supposed to reside in the windows system directory.   Other products may have installed these files in the windows directory or elsewhere.   Scan all directories for these two files and eliminate any occurrence of these files outside of the \WINDOWS\SYSTEM directory. Make sure the files in the \WINDOWS\SYSTEM directory are the ones shipped with Win Multiple Configurations or NEWER.   Visual Basic file formats were changed between Version 1.0 and Version 2.0.   This is NOT a problem with WMC, but is an incompatability between Visual Basic 1.0 and Visual Basic 2.0 VBX files.

Miscellaneous

Also available from JRE Enterprises is JRE Home Inventory.   Requires Windows 3.1 and VBRUN200.DLL.   JRE Home Inventory can be found on CompuServe (WINSHARE forum) and America Online (Windows software) with a keyword of JRE.

JRE Enterprises can be contacted on CompuServe via mail to ID 71162,2311 or contacted on America Online via mail to ID LeeL641756.

WMCSAVE Program

The WMCSAVE program is used to save configuration information.   The current Windows configuration should be saved with WMCSAVE before attempting to create and save different Window configurations.   WMCSAVE allows up to eight configurations to be saved.   Any time the windows configuration changes, WMCSAVE/WMCQSAV should be invoked to store the changes in the appropriate configuration entry.

WMCSAVE easily saves different configuration entries.   These configurations entries can be restored by running program WMCSTRT/WMCQSTR.   WMCSTRT should be placed in the StartUp group.

The WMCSAVE program determines the files to save for a configuration entry by the *Include File* list for that entry.   When first saving a configuration entry, the *Include file* list is initialized based upon the windows shell program being used.   In addition, the user can modify the *Include File* list.

If Program Manager is the shell (shell = progman.exe), then the *Include File* list is initialized with the following files: WIN.INI, SYSTEM.INI, CONTROL.INI, PROGMAN.INI, and WINFILE.INI.

If Norton Desktop is the shell (shell = ndw.exe), then the *Include File* list is initialized with the following files: WIN.INI, SYSTEM.INI, CONTROL.INI, NDW.BIN, NDW.DAT, NDW.INI, FRAME.DAT and NLAUNCH.DAT.   Also, all *.QAG files will be saved.

All other shell programs have the *Include File* list initialized to the following files: WIN.INI, SYSTEM.INI, and CONTROL.INI

Note: Any time PROGMAN.INI is in the Include File list, then all *.GRP files specified in PROGMAN.INI will be saved.

Related topics:
WMCSAVE Main Window

WMCSAVE Main Window

The main window of the WMCSAVE program allows up to eight different configuration entries to be saved.   The active configuration selection has its text box background color different than the other seven selections' background color.

Clicking with the left mouse button on any of the entries (pictures) will bring up the Customize Options Window.   This window provides the ability to set various options to use when saving and restoring the selected configuration.

Clicking with the right mouse button on any of the entries (pictures) will make that entry inactive.   All saved configuration files for the entry will be deleted and all configuration options set back to their default values.

The File menu item gives provides the ability to invoke the registration process.   The Help menu item provides the ability to display the about window, which gives the copyright notice and version/release number for Win Multiple Configurations.

The *EXIT* key will terminate the WMCSAVE program.

✓ **Customize Options Window**

The customize options window appears after an entry has been selected by clicking with the left mouse button on the entry's picture.   Six primary options can be chosen on this window.   These options are: Save the current Windows configuration now, Save windows configuration on switch, Change the text description for the entry, Use a different graphic/picture for the entry, Add/Change/Delete a password for the entry, and/or make Inactive entries visible on WMCSTRT window..

Click on an option's check box in the picture for additional information on that option.

Select an option by clicking on the option until a "X" (check) appears in its box.   When all options needed have been checked, press the *Process* key to do the options.   Press the *Cancel* key to exit without doing any options.

Add Password Window

The add password window appears if the "add a password" option was checked on the Customize Options Window.   Type in a password from one-to-twelve characters in length in both password text fields.   If the same password is typed in both password fields, then the password is added.   REMEMBER the password or else the saved configuration entry will not be accessible.

Press the *Done* key to save the password.   Press the *Cancel* key to exit without saving the password.

Change or Delete Password Window

The change or delete password window appears if the "change/delete a password" option was checked on the Customize Options Window.   To change a password,   type in a new password from one-to-twelve characters in length in both password text fields.   If the same password is typed in both password fields, then the password is changed.   REMEMBER the password or else the saved configuration entry will not be accessible.   To delete a password, do not type in any characters, just press the *Done* key.

Press the *Done* key to change or delete the password.   Press the *Cancel* key to exit without changing or deleting the password.

 Choose New Graphic/Picture Window

The choose new graphic/picture window appears if the "choose new graphic/picture" option was checked on the Customize Options Window.   This window allows the specification of a different graphic/picture to be displayed for the configuration entry.   The valid graphic formats are: BMP, WMF, ICO, and DIB.   Select a graphic by double clicking on its name in the *file list* box.   The graphic will be displayed on the right side of the window as it would look when displayed on the main forms of WMCSAVE and WMCSTRT.   The image box size is 81 pels by 81 pels.   Graphics smaller than this will   automatically be expanded to fit the box size.   Graphics larger than this will automatically   be shrunk to fit the box size.

Press the *Use Graphic* key to use the selected graphic for the entry.   Press the *Cancel* key to exit without using a graphic.

Update File Include List Window

The update file include list window appears if the "update file include list" option was checked and the "save the current windows configuration now" option was checked on the Customize Options Window.   This window allows you to select additional files to include in the save/restore process for the selected configuration entry.   Double click on files in the *File Name* list to add them to the *Include Files* list.   Files from various drives and/or directories can be added to the list.   Other types of files, besides INI files, can be added to the list by changing the *.INI in the *File Name* field.   To remove files from the *Include Files* list, double click on them.

Press the *Update File Include List* key to process the new include files list.   Press the *Cancel* key to exit without saving any changes made to the include files list.

🔒 Registration Window

The registration window is used to enter the registration number and the registered person's name.   After entering a valid registration number, the registered user will no longer receive the "Unregistered Shareware" messages.   The registration number is not case sensitive -- there is not a difference between lower-case characters and upper-case characters in determining a valid registration number.

The *UPDATE* button will validate the registration number and will write a valid registration number and the registered name to the JREWMC.INI file.

The *EXIT* button will close the registration window.

Registration Command

Save the Current Windows Configuration Now

Checking the "Save the current windows configuration now" option will have the current configuration saved.   What files are saved is determined by the *Include File* list.   If PROGMAN.INI is in the *Include File* list, then all groups listed in PROGMAN.INI will be saved.   If Norton Desktop is the shell, then all QAG files in the windows directory and in the Norton Desktop directory will be saved.   This option has four sub-options:

> Issue a Save Setting
> Update file include list
> Only save group information
> WMCSTRT handles StartUp Group

Issue a Save Settings

Checking the "Issue a Save Settings" sub-option allows the user to specify whether WMCSAVE will have Program Manager or Norton Desktop do a "Save Settings", before the Windows configuration is saved.   All configuration changes still in memory will be written to the hard drive, before WMCSAVE saves the current Window's configuration.

Update File Include List

Checking the "Update file include list" sub-option allows the user to modify the *Include File* list. The Include File list determines which files are copied when the configuration is saved/restored. This sub-option and sub-option <u>Only save group information</u> are mutually exclusive.

Only Save Group Information

Checking the "Only save group information" sub-option allows the user to specify whether this configuration entry will only save group files (*.GRP and PROGMAN.INI).   If only group files are saved, then a restart of Windows is NOT needed when switching to this configuration.   Switch between different group layouts easily, quickly and without restarting Windows!   This sub-option is only available if the Windows shell program is Program Manager.   This sub-option and sub-option <u>Update file include list</u> are mutually exclusive.

Note:
For users of WMC V2.1c or earlier, the following MUST be done before using this sub-option:
> Restore each of your saved configurations that uses Program Manager as its shell, this is accomplished by using WMCSTRT.   Re-save the restored Windows configurations using WMCSAVE/WMCQSAV (V3.0 or later).   After all the saved configurations have been re-saved,   this sub-option can be used.   If this process is not done, unpredictable result will occur when switching to a configuration saved using this sub-option.

WMCSTRT Handles StartUp Group

Checking the "WMCSTRT handles StartUp Group" sub-option allows the user to specify that only WMCSTRT will be started when Windows starts.   Once a configuration entry is chosen from WMCSTRT/WMCQSTR, then that entry's StartUp group programs are started after any necessary saving/restoring of files and restarting of Windows.   This sub-option is only available if the Windows shell program is Program Manager.   WMC does not handle programs being loaded or run from the WIN.INI RUN= or LOAD=   lines.

WMCSTRT: Holding the *SHIFT* key down when selecting a configuration saved with this sub-option will bypass the running of the programs in the StartUp group.

WMCQSTR: The program will issue a prompt to determine if programs in the StartUp group should be run.

Save Windows Configuration on Switch

Checking the "Save windows configuration on switch" option will save the current configuration per the include file list everytime a user switches from using this configuration entry to using a different configuration entry with program WMCSTRT/WMCQSTR.   This configuration entry will be kept up-to-date automatically.   If the configuration changes while using this configuration entry, those changes will be saved automatically to the configuration entry when switching to another configuration entry.   Otherwise, the user will need to manually save the configuration, using WMCSAVE/WMCQSAV, anytime a configuration change occurs.

Issue a Save Settings on Switch

Checking the "Issue a Save Settings on Switch" sub-option allows the user to specify whether WMCSTRT/WMCQSTR will have Program Manager or Norton Desktop do a "Save Settings" before saving the current configuration on a switch.   This process will write out any configuration changes from memory to the hard drive, before WMCSTRT/WMCQSTR saves the then current windows configuration.   WMCSTRT must have the /n flag set to issue the Save Settings command.

Change the Text Description

Checking the "Change the text description" option allows the user to change the text description for the configuration entry.

Use a Different Graphic/Picture

Checking the "Use a different graphic/picture" option allows the user to change the picture being used for the configuration entry.

Add/Change/Delete a Password

Checking the "Add/Change/Delete a password" option allows the user to add/change/delete a password for the configuration entry.

Inactive Entries Visible on WMCSTRT Window

Checking the "Inactive entries visible on WMCSTRT window" option allows the user to specify if inactive entries will be displayed on the WMCSTRT window.   Leaving this option unchecked will make inactive entries invisible on the WMCSTRT window.

WMCQSAV Program

The WMCQSAV program is used to quickly save the current Windows configuration to the current WMC configuration entry.   WMCQSAV can also be used to issue a Save Settings command to Program Manager, or issue a Save Configuration command to Norton Desktop for Windows.   WMCQSAV does not allow you to change configuration options, to change configuration options use WMCSAVE, instead.

WMCQSAV can be placed in the StartUp group so it can be accessed quickly when a Save Settings and/or a save Windows configuration is needed.

WMCQSAV will accept two command line switches: /c and /s.   The "/c" switch causes WMCQSAV to perform a "Save Windows Configuration".   The "/s" switch causes WMCQSAV to perform a "Save Settings" for Program Manager or a "Save Configuration" for NDW.   Both switches may be used.   If any switch is used, then WMCQSAV will not display the "Quick Save" Window.

WMCSTRT Program

The WMCSTRT program is used to restore a saved configuration.   WMCSTRT should be placed in the StartUp group.

If there are active configuration entries when WMCSTRT runs, WMCSTRT will display a configuration selection window.   If there are no active configuration entries when WMCSTRT runs, WMCSTRT will end without displaying a configuration selection window.

WMCSTRT will accept two command line switches: /d and /n.   The "/d" switch causes WMCSTRT to always display the configuration selection window, unless there are no active configuration entries.   Do NOT use "/d" when WMCSTRT is in the StartUp group as WMCSTRT will not work properly.   Do use "/d" when WMCSTRT is in any other group, otherwise WMCSTRT will display the configuration selection window on every other run of WMCSTRT.   The "/n" switch lets the user exit WMCSTRT without selecting a configuration entry.   Without the "/n" switch, WMCSTRT takes complete control of Windows and does not allow exit until a configuration entry is selected.

WMCSAVE is the counter-part to WMCSTRT.   WMCSAVE saves different configurations.

Related topics:
WMCSTRT Main Window

WMCSTRT Main Window

The main window of the WMCSTRT program allows the selection of a configuration entry to use from up to eight, previously-saved configuration entries. The active configuration selection has its text box background color different than the other seven selections' background color.

Clicking with the left mouse button on any of the active entries (pictures) will restore that configuration. If the selected configuration was saved with the "Only save group information" sub-option unchecked, then Windows will be restarted. If the entry selected was the configuration entry last used by Windows, then the StartUp group programs are started if the configuration was saved with the "WMCSTRT handle StartUp Group" sub-option checked.

If the *SHIFT* key is held down when selecting a configuration saved with the "WMCSTRT handle StartUp Group" sub-option checked, then the StartUp group programs will not be run.

If an entry is password protected, a prompt for the password is done. If the password entered is correct, then the configuration entry is restored. A total of three trys are allowed to enter the correct current password for the configuration entry.

If the "Inactive entries visible on WMCSTRT window" is on, all entries are displayed, even inactive ones. Clicking on inactive entries has no effect. If the "Inactive entries visible on WMCSTRT window" flag is off, only active entries are displayed.

WMCQSTR Program

The WMCQSTR program is used to switch between two saved configurations, without having to bring up the WMCSTRT Window.   WMCQSTR requires a command line switch that specifies which configuration entries to switch between.   The command line switch should be in the form "/a/b", where a specifies one saved configuration entry and b specifies another saved configuration entry.   Saved configuration entries are numbered 1 to 4 from Top Left to Bottom Left and are numbered 5 to 8 from Top Right to Bottom Right.

WMCQSTR will issue a prompt to determine if programs in the StartUP group should be run.

Create as many of these Program Items as needed to flop between configuration entries at the double-click of   the left mouse button.

Examples:
   To switch between the top two entries, make the command line: WMCQSTR /1/5
   To switch between the bottom two entries, make the command line: WMCQSTR /4/8

About Menu Item

Displays the <u>About Window</u>, which gives the copyright notice and the release number for Win Multiple Configurations.   Also displayed is various windows system information.   This item is found on the main form of program WMCSAVE by choosing the HELP menu item.

Save the Current Windows Configuration Now

Checking the "Save the current windows configuration now" option will have the current configuration saved.   What files are saved is determined by the *Include File* list.   If PROGMAN.INI is in the *Include File* list, then all groups listed in PROGMAN.INI will be saved.   If Norton Desktop is the shell, then all QAG files in the windows directory and in the Norton Desktop directory will be saved.   This option has four sub-options:

       Issue a Save Setting
       Update file include list
       Only save group information
       WMCSTRT handles StartUp Group

Issue a Save Settings

Checking the "Issue a Save Settings" sub-option allows the user to specify whether WMCSAVE will have Program Manager or Norton Desktop do a "Save Settings", before the Windows configuration is saved.   All configuration changes still in memory will be written to the hard drive, before WMCSAVE saves the current Window's configuration.

Update File Include List

Checking the "Update file include list" sub-option allows the user to modify the *Include File* list. The include file list determines which files are copied when the configuration is saved/restored. This sub-option and sub-option <u>Only save group information</u> are mutually exclusive.

Only Save Group Information

Checking the "Only save group information" sub-option allows the user to specify whether this configuration entry will only save group files (*.GRP and PROGMAN.INI).   If only group files are saved, then a restart of Windows is NOT needed when switching to this configuration.   Switch between different group layouts easily, quickly and without restarting Windows!   This sub-option is only available if the Windows shell program is Program Manager.   This sub-option and sub-option Update file include list are mutually exclusive.

Note:
For users of WMC V2.1c or earlier, the following MUST be done before using this sub-option:
    Restore each of your saved configurations that uses Program Manager as its shell, this is accomplished by using WMCSTRT.   Re-save the restored Windows configurations using WMCSAVE/WMCQSAV (V3.0 or later).   After all the saved configurations have been re-saved,   this sub-option can be used.   If this process is not done, unpredictable result will occur when switching to a configuration saved using this sub-option.

WMCSTRT Handles StartUp Group

Checking the "WMCSTRT handles StartUp Group" sub-option allows the user to specify that only WMCSTRT will be started when Windows starts.   Once a configuration entry is chosen from WMCSTRT/WMCQSTR, then that entry's StartUp group programs are started after any necessary saving/restoring of files and restarting of Windows.   This sub-option is only available if the Windows shell program is Program Manager.   WMC does not handle programs being loaded or run from the WIN.INI RUN= or LOAD=   lines.

WMCSTRT: Holding the *SHIFT* key down when selecting a configuration saved with this sub-option will bypass the running of the programs in the StartUp group.

WMCQSTR: The program will issue a prompt to determine if programs in the StartUp group should be run.

Save Windows Configuration on Switch

Checking the "Save windows configuration on switch" option will save the current configuration per the include file list everytime a user switches from using this configuration entry to using a different configuration entry with program WMCSTRT/WMCQSTR.   This configuration entry will be kept up-to-date automatically.   If the configuration changes while using this configuration entry, those changes will be saved automatically to the configuration entry when switching to another configuration entry.   Otherwise, the user will need to manually save the configuration, using WMCSAVE/WMCQSAV, anytime a configuration change occurs.

Issue a Save Settings on Switch

Checking the "Issue a Save Settings on Switch" sub-option allows the user to specify whether WMCSTRT/WMCQSTR will have Program Manager or Norton Desktop do a "Save Settings" before saving the current configuration on a switch.   This process will write out any configuration changes from memory to the hard drive, before WMCSTRT/WMCQSTR saves the then current windows configuration.   WMCSTRT must have the /n flag set to issue the Save Settings command.

Change the Text Description

Checking the "Change the text description" option allows the user to change the text description for the configuration entry.

Use a Different Graphic/Picture

Checking the "Use a different graphic/picture" option allows the user to change the picture being used for the configuration entry.

Add/Change/Delete a Password

Checking the "Add/Change/Delete a password" option allows the user to add/change/delete a password for the configuration entry.

Inactive Entries Visible on WMCSTRT Window

Checking the "Inactive entries visible on WMCSTRT window" option allows the user to specify if inactive entries will be displayed on the WMCSTRT window.   Leaving this option unchecked will make inactive entries invisible on the WMCSTRT window.
