Q U A D(tm) *Rules of the game*

How to play: Slide in pieces in one of the seven columns (using the mouse or the keys <1> - <7>, see [Controls & environment](#)). The pieces always land in the bottom row of the column (they fall down).

Object: The object of the game is to be the first player to slide in 4 of your pieces in a line. The line can be horizontal, vertical or have 45° slope.

Players: There are two ways to play Quad, Human vs Computer or Human vs Human. The player with the red pieces begins, and then the player with the blue pieces moves. Players move alternately.

Computer: You can select from the various levels for the computer, try first the lowest level (Stupid), and work up to the highest level (Ingenious).
