ABOUT THE EDITION

The **WinOnLine™ Review™ Shareware Edition** is published weekly by **Windows OnLine™**. It is dedicated to bringing you news and reviews on the latest files available to members of **Windows OnLine™ (BBS)** and the general community of bulletin board users. Print publications just can't match the *immediacy* of this electronic media. **Each and every week** we bring you the *newest shareware, freeware* programs and *features*, such as:

Windows Shareware Briefs - Quick and informative reviews of the **newest entries into the shareware and freeware market**. Are they good, bad or buggy? We'll give you useful details that will tell you if it's worth your download time!

New Files - Tasty extracts from the past week of **Windows** and **OS/2** files posted at **Windows OnLine™ (BBS)**. Now you will know about that **new graphics driver**, that **freeware update**, or discovered that neat **WAV** or new **FONT** file. All without sifting through files at several other on-line services, if they even have what you're looking for! For new DOS files, call **Windows OnLine™ (BBS)** to review our huge selection.

Feature Reviews - Hear about hands-on experiences with the inner workings of the some of the **newest shareware**, with full glorious and gory details of its ups and downs. Our experienced writers bring you perspective with their frank and honest reviews.

The WinOnLine™ Review™ Shareware Edition *is published weekly courtesy of the* **Windows OnLine™**

We hope you find this weekly publication of great value and interest and become a regular reader. We'd appreciate your comments and suggestions. Leave a comment (C) on **Windows OnLine™ (BBS)** at **1-510-736-8343** or write to,

Welcome to the
WinOnLine™ Review™
SHAREWARE EDITION

SOUND OFF!!!

Actually, **SOUND ON!** This week's selection of Shareware seems to be dominated by those of the WAV persuasion. Wolly is a bit deaf from all the noise, but jumped into the fray and reviewed a number of the submissions in this week's Shareware Briefs column. For the second week in a row **Windows OnLine™** was swamped with an incredible selection of **new files and fonts**, and the dominate type of file seems involved with WAV files and associated fun. WAVer or not, here they come, along with a ton of other great stuff!

WRITERS WANTED

Wolly is looking for a few good writers to contribute reviews to the **WinOnLine™ Review™ Shareware Edition**. *Ernest Hemingway need not apply*. We like honest and genuine use reviews, not just listings of features, and you need not be an English Major or have any other sort of military experience. If you'd like to share your experiences with other Windows folks and see your name enshrined in Help File history, call **Windows OnLine™** at **1-510-736-8343** (modem) and join the writers' conference #4 (J 4) and leave Wolly or publisher Frank Mahaney a message. You can also reach Frank at 1-510-736-4376 (voice) to find out more details. Don't ask for me, Wolly doesn't do phones; call-waiting puts me over the deep end. BTW, you *do not* have to know how to put together a help file, just an **informative article with some pretty pictures**.

MODEMS!!

Join the **F>A>S>T>** club. **Windows OnLine™** has a limited number of **14.4 US Robotics modems** available at a new price point (that means LOW). Check out the section on modems -- nows the time to order. You can get a genuine quality of US Robotics for the same or less than what you'd pay for Brand X. Now there's no reason at all to hold back or limit yourself to second best.

OPINION: WP5.1 USERS:

Wolly just wants to state, for the record, a fact that has been proven many times. This may illuminate the path of a certain individual which propriety prohibits identifying: Word Perfect 5.1 users are easy to identify. They're the ones with little spots of White-Out all over their monitors and big keyboard templates flopping around their function keys. <g>

Until next week . . .

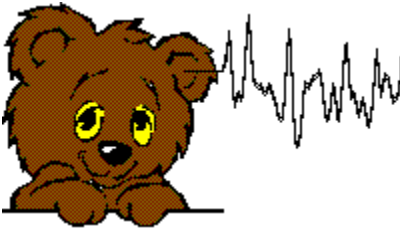

Enjoy!

SONOWAVE

I wonder what Bear tastes like?

WAV freaks will be in their glory with Sonowave, a **freeware** program from OSOSOFT. Gram yourself into oblivion with live visuals of your WAV files with a **Sonogram, Cyclogram, Dynagram or Scatter Display** of the sound. You can save these graphic images as BMP files, or import them into paintbrush for editing, though for what reason I'm not exactly sure. Nonetheless, it was somewhat, and briefly, interesting to Wolly, and may be even more interesting to you, so consider a look at **SONOWAVE.ZIP** (35K). For some odd reason, the Ososoft Bear, near and dear to us all, displayed his cutesy face with a title bar of Multilabel, another product from Ososoft, when we ran Sonowave. Wolly considers him cute enough to eat, so he better steer clear of Danville, CA., lest he end up on the barbeque slathered with sauce. Yum!

RUMMAGE

Hard drives eventually look like attics, don't they?

Rummage is a **well designed program** that accomplishes two missions. Its prime directive is to **locate and display duplicate files** across your drive, selecting those with identical file names, optionally excluding those with differing sizes. There is even a **CRC check which can be performed** to determine if the files are precisely the same or not. You may scroll through the window of selected dupes and highlight those you wish to nuke or examine more closely --- Rummage provides two icons to which you may drag the culprits. **The toxic waste barrel will burn them**, or the little truck will bring you a dialog box to **select a new location on your drive to which to move or copy them.**

This brings up the second use for Rummage. Using the **file find facility** you may specify an extension, for instance, to list all those BMP files lurking about your drive. With the select

and move facility, you could herd them all into a new subdirectory. **I found Rummage instantly understandable and usable**, though I wish it would have been able to scan both my drives for dupes. A couple of lines are available to pop up for help in each screen location on demand if any function needs clarification. **RUMMGE20.ZIP** (92K) is a winner in Wolly's book, nicely and neatly done and for a mere **\$10.00** can be ethically yours.

TRUE TYPE FONTS

More and more and more . . . (Wolly needs a bigger hard drive)

Child's Play

KID.ZIP (20K)

DUREND.ZIP (47K)*

ÖURROW

©Potsdam

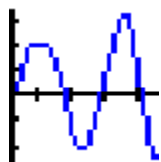

POTSDA.ZIP (46K)*

VISAGE.ZIP (205K)*

*Those fonts marked with an asterisk are from The Scriptorium Font Library, collections of fonts designed by Dave Nalle of Ragnarok Games for use in their publications. In each case the **ATM files are included** as well as the TTF files, results of which are shown here. VISAGE, which sounded interesting, would not display for Wolly in TTF, with the exception of one character.

WAV FILTER

But will it screen out the dumb noises?

Another program for those who like to catch a WAV. This one adds a new dimension to editing: the ability to **put the sound through a specific filter to remove different frequencies**. For example, if you select a high pass filter, it will remove all sound below the specified frequency, low pass is the alternate. Band filters remove all sound within or without a specified frequency range. While WAV Filter will not support stereo or 16-bit samples, it is still an interesting exercise in active filtering of sound by your PC. Registration for the program is **\$17.00**, and you'll find that **WAVEFLTR.ZIP** (117K) has some miles on it; **the author lives in**

Slovenia (formerly Yugoslavia).

SOUND MAN

Huh? Say what?

Wolly will try to be gentle, but this little cutie is a **resounding turkey** in the group of shareware sound programs this week. It lists the WAV files located in your Windows sub-directory (only) and provides the ability to play them. Don't run it from another drive, because it won't find your Windows directory . . . and who keeps all their WAV files in their Windows directory? The author requests **\$2.00** for **SOUNDM10.ZIP** (45K), certainly a reasonable sum, and states that this is his first effort at C++. Wolly respectfully requests that the author continue to exercise his programming muscles privately rather than release programs of such limited scope.

WINGUIDE EASYREF®

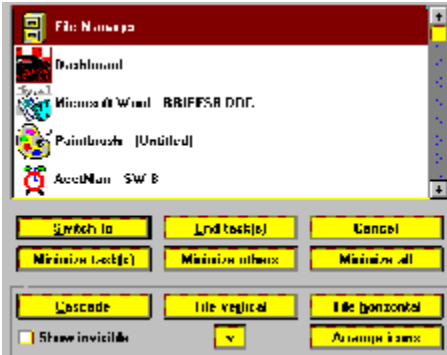

SYS.INI Help for Professionals

Ever wish you had the **SYS.INI reference** section from the Windows Resource Kit handy without carrying the book around? The folks at PC Strategies have this one nailed, with the areas pertaining to the subject in a well-organized **Help File format**. This one is **freeware**, but if you want any more they're \$9.95 each or \$49.95 for a flock of fifteen. Still, **EASYREF.ZIP** (138K) may be handy to have on in your stack of road disks and the full version could be your contribution towards the paperless society.

FTASKMAN

Task Manager Replacement

Windows Task Manager is kind of vanilla, in terms of taste and function. **FTaskman** comes along with a bit more tutti-frutti. Set it up as a replacement to get a more colorful display capable of displaying the icons of all tasks if you like. It's just generally more flexible, enabling you to end several tasks at once and basically just putting more options at your mouse's feet. **Simple to set up and audition**, check out **FTASK105.ZIP** (31K) courtesy of author Andreas Furrer, who presents his creation as **freeware**. He also provides a German version, and says *Dies ist Version 1.05 von FTaskman. FTaskman ersetzt den Taskmanager von Windows 3.1.* He also says *Es lebe die Freeware!* (long live the freeware) a sentiment Wolly wholeheartedly endorses.

SCOPA

Italian import better left in Naples

Wolly ran into a real problem with Scopa. First, it wouldn't run. Then it ran, but Wolly's memory too low alarm went off, and it terminated (and Wolly ain't no amateur --- he has 16 megs RAM). Then, it ran, sort of, but Wolly had no idea what to do, how to do it, and nothing seemed to work. *Infomazione su Scopa* didn't help, because Wolly doesn't speak Italian. Perhaps it's just as well, because this import is much like a Yugo. Doesn't run regularly or well when it does. **SCOPA.ZIP** (44K) is **freeware** (that word was in English), but nowhere as far as Wolly is concerned.

SURF'S UP

dude!

Surf's Up does require a bit of housework to **associate a WAV file with the running of a program**, but it's worth it and it does work well. If you are a fan of such fluff, this will ring your chime (or play your way ??). Personally, I can see a malicious side where I might just stick this on someone's PC and associate a loud and obnoxious WAV with a game or some such program an associate runs illicitly and too often. Heh-Heh-Heh! Leave it to Wolly to use his powers for evil instead of good. **SURFSUP.ZIP** (10K) is from author Zane Rathwick who asks that you send him an appropriate reward for his efforts; **\$5.00** and above will be reciprocated with a disk with other programs he has authored.

WHOOOP IT UP!

Okay. Let's go.

Whoop it Up goes a few steps further than Surf's Up and lets you **associate WAV files and even AVI files (video) with applications and system events**. This is a classic and very popular among Wavers who like to exercise their sound cards at every turn. The random file function is crippled in the shareware version. Extremely simple, **WHOOOP30.ZIP** (88K) is yours for **\$31.95**, a lot more than Surf's Up. I guess it depends on how noisy you want to be and what it's worth to you.

WATCH OUT, WILLI!

I'll probably fall on you when I doze off

Watch Out, Willi! is an enhanced version of STONE-AGE DELUXE, a program for the Atari ST, according to the authors. I suppose it had charm back about the time the Mario Brothers came on the scene, but those days have passed. Willi offers multiple scenes as well as the ability to create your own, but it's essentially a single concept game. It also seems to suck the available memory right out of my machine. **WILLI.ZIP** (68K) is oldware which you can register for **\$10.00**. But Wolly and Willi don't mix.

CONFOUND

Definitely does

And it did Wolly. Author Pete Koziar reminisces about days gone by and the game he played in his youth. His fond memories can be your present aggravation with Confound, a strategy game with apparent charm that eluded me. Your two home positions must be protected from occupation by your opponent (the computer) by building walls while you go after the computer's homes. Whomever gets there, wins. I suppose if you like chess, you might want to take a gander at **CONFND.ZIP** (52K). Registration is **\$15.00**. Wolly hasn't the attention span (and perhaps intelligence) for it.

What a lousy week for games, eh?

Wolly's Shareware Frowns

Wolly left out a couple programs this week which **bugged him into submission** with their **nag screens** or similar techniques. When will authors learn that interrupting our enjoyment of your program is not going to endear you to us. Let's face it, **if you tick Wolly off enough he isn't gonna send you squat** and probably will zap your program right off the drive.

Those programs which subtly make their pitch when you terminate them or open them with "**You have used Windows Gizmo 8 times since 3/15/93. We hope you continue to find it useful and will consider registering at this time.**" are more Wolly's speed. Let me know me how long or how many times I've used your program. Then, perhaps, I'll be respectfully reminded to recognize its usefulness and send you your due.

My irrefutable opinion,

WinCapture

SnagIt

Screen Capture

Soon after I installed Windows, I had an out of state friend inquire about installing a software program he had just bought. Since I, too, was using this program I thought it would be a simple matter to explain the program installation. As I tried to describe what to look for when installing and using the program, I realized how wise Confucius was when he said *A picture is worth a thousand words*. A short time later I was browsing the local bulletin boards and came across a screen capture utility. My first thought was how helpful the program would have been, had I had it only a short time before. I could have captured the screen shots my friend needed to see and faxed them too him with little or no trouble.

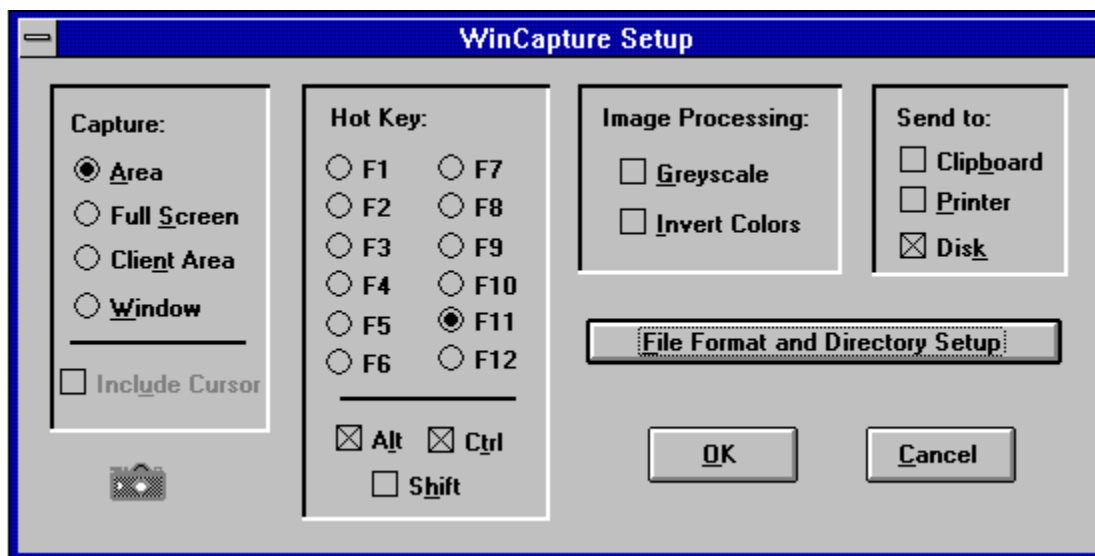

Since then, the screen capture utilities I use have become an indispensable part of many of my jobs. Even this weekly column sports a variety of graphics taken directly from the screen with these utilities. But, anyone who needs to import a screen graphic into a word processor document can also use a good screen capture utility. Those familiar with windows procedures know that an entire screen can be copied to the clipboard by simply pressing the **PRINT SCREEN** button. But, this process is not without its own problems. Most often, I only use a portion of a single window, not the whole screen. Copying the whole screen usually requires an additional trip to Paint Brush just to remove the areas I don't need. I suspect most people have similar requirements. So, no matter whether your need for screen shots is great or small, a good screen capture utility should be part of you arsenal of windows tools. Two worthy screen capture utility programs that you should inspect are the *Professional Capture Systems* and *SnagIt*.

Rather than an either-or situation, I use both these screen capture utilities, and I recommend you give both a tryout. You, like me, may not be able to decide between them. So, rather than make a choice I've found I use both these programs quite a lot. Each has its own features and capabilities and each, or both, will be good additions to your system.

Professional Capture Systems

Professional Capture Systems, or *PCS*, rather than a single program is actually two different screen capture utilities combined into a single package. These programs, include a Windows capture utility and a DOS capture utility. Together they will take care of virtually any screen capture requirements you may have. The Windows capture program, called *WinCapture*, saves the screen shot in a variety of graphic file formats and the DOS variation, called *DOS Capture*, saves your screen capture as a .PCX file. These files, once captured, can then be cleaned up or modified in PaintBrush or almost any other similar paint program.

The program, in both variations, is easy to setup and use. The *PCS* program has its own SETUP routine and is remarkably easy to install. Simply run the setup program and the program asks for a source and destination and whether or not you'd like *PCS* added to the Program Manager. Once installed, the *WinCapture* part of the program is also quite easy to setup and configure to your personal work style. Once installed and activated the program opens as an icon. A single click on the icon brings up a dialog box. In addition to the standard Windows commands the box also allows access to the setup screen for *WinCapture*.

The setup screen offers a variety of options for capturing exactly what you want. The first option is the specific area to capture. Here you can setup the program to capture the whole screen or any part of it. You may also select the option to include the cursor in the capture as well. The program also allows you to select a Hot Key from a variety of function key combinations to activate the capture routine. The captured image may also be set to copy as a grayscale or with inverted colors. The default value you get by not selecting either of these is exactly what you see on the screen. *WinCapture* permits the captured image to be sent to the clipboard, printer or disk. Clicking the *File Format and Directory Setup* button permits you to select a pre-set drive or directory for the captured image. You may also choose to save the captured image in any of ten different graphic formats. The *WinCapture* program supports several variations of BMP, GIF, PCX, PIC, TIF, and WPG formats.

Once an image is captured you can view the image by selecting the *View Last Capture* option from the opening *WinCapture* dialog box. The program is surprisingly easy to use and

should take less time to learn than it has to read this article. The *Professional Capture Systems* utility is an excellent program to help you add a bit of pizzazz to any of your documents. Members of Windows OnLine can find *Professional Capture Systems* as PCS102.ZIP in Directory #20 - (WINDOWS-Graphic, Draw & Charting).

SnagIt 2.0

SnagIt is a straight windows screen capture program. I have personally used this program for quite some time and frankly I'd be lost without it. The most compelling features of *SnagIt* are its simplicity and capabilities.

The complete operation of the *SnagIt* program is shown under **Commands** in the **Help** section. And it really is that simple to run the program. When activated, the program comes up with your last setup arrangement described in a sentence at the bottom of the screen. If you wish you can simply begin your screen capture. Or, if necessary you can make any changes to the setup.

Input	Output	Format
S creen Entire Window Window Client Area √ Last Active Window Region BMP File Clipboard	P rinter Clipboard √ BMP File TIF Mono File	M onochrome... √ Color Dithered Grayscale
	O ptions Alert... Clipboard Chain Color Boost... Scale... Save Setup	H elp Commands... System Info... About SnagIt...

Changing the setup is simply a matter of selecting your choices from the array of menu options. The program accepts input from a wide variety of sources and will output to your printer, clipboard, or disk. You can select to save the output as either monochrome, color, or a dithered grayscale image. This is especially useful if you need to output a screen capture to your laser printer. I frequently use *SnagIt* to capture program screens for printed materials. The monochrome option automatically selects the colors for you. No need to go into the image with a paint program to clean up the colors so they can be printed in black and white. Light colored areas on the screen print as white and darker areas print black. The scale option is also handy when printing. Since my computer is setup with an 800 x 600 SVGA, the images typically print out too small for most of my work. So, I simply change the scale value from 1 to 2 and the size of the printed capture is doubled.

SnagIt is also equipped with a couple very useful macros for those using Microsoft Word for Windows. These files are SNAGWW.DOC and SNAGWW2.DOC. These macros allow you to add *SnagIt* to your WinWord menus (in both versions 1.X or 2.x of WinWord). Complete instructions for installing and using the macros are also included. Using these macros from within WinWord allows you to leave WinWord, capture an image from another program screen, using *SnagIt*, and return to WinWord. The image is then placed in your document, right where you left the cursor.

SnagIt is a very useful utility to help simplify your work. Members of Windows OnLine can find *SnagIt* as SNAG207.ZIP in Directory #150 - (WINDOWS-New Uploads).

THE LATEST WINDOWS FILES

The following file listings became available on Windows OnLine two weeks prior to the issue date, and may not yet be available on some bulletin board systems. Many more files were added to our library during that time, but only files of recent date are listed here. Members of Windows OnLine can download WOLRECNT.ZIP or use our mail door to obtain a complete listing.

Notice:

Windows OnLine (BBS) makes every effort to identify and to post only shareware, freeware, demos, working models and drivers (software files and programs) for it's membership which are intended for free public distribution. Due to the lack of documentation and other descriptive files contained within certain archives, it can be quite difficult to identify and remove improper and otherwise copyrighted files and programs from our file listings.

It is the policy of Windows OnLine (BBS) not to allow such improper and illegal files and programs on the BBS, at any time. Our Readers and Members are asked to cooperate with us in our efforts to identify such improper files and to assist WOL in its efforts to remove ANY inadvertent inappropriate file postings.

Thank You.

OS/2 THE LATEST OS/2 FILES

Notice:

Windows OnLine (BBS) makes every effort to identify and to post only shareware, freeware, demos, working models and drivers (software files and programs) for it's membership which are intended for free public distribution. Due to the lack of documentation and other descriptive files contained within certain archives, it can be quite difficult to identify and remove improper and otherwise copyrighted files and programs from our file listings.

It is the policy of Windows OnLine (BBS) not to allow such improper and illegal files and programs on the BBS, at any time. Our Readers and Members are asked to cooperate with us in our efforts to identify such improper files and to assist WOL in its efforts to remove ANY inadvertent inappropriate file postings.

Thank You.

This listing is as of March 1993 and is presented as an example of the tremendous number of WOL directories and files available to members. Remember, these are clean file listings, purged of useless duplicates or obsolete files. Windows OnLine™ works hard to gather the best and latest for its members!

Windows OnLine™ brings **THE BEST AND LATEST FILES**

NO JUNK - we obtain the files ourselves, screen them thoroughly and edit their descriptions

THE LATEST FILES and MORE FILES - we get them EVERY DAY!

MINIMAL DUPES - we clear off the old when we bring on the new

EVIDENCE: Scan the **NEW FILES LISTINGS** in this issue. This is just our Windows and OS/2 files. Twice as many DOS files come in each week in addition to the quality and quantity you see here.

NOW, LOOK AT THE SIZE AND NUMBERS OF FILES in our listings:
