

What's New in BRInfo 1.23.

#####

BRInfo version 1.23 is a minor bug-fix release.

Following is a list of bugs fixed in this version:

- ⓪ When upgrading to DOS 5.0 from previous versions, the second system file (MSDOS.SYS) is not continued. RestInfo identified it as an error and attempted to SYS the hard disk over and over again. This is now fixed.
- ⓪ Fixed routines to support 4DOS 4.0.
- ⓪ Fixed colours problems when terminating Back/RestInfo programs.
- ⓪ Back/RestInfo programs are NOT Multitasking aware programs. However, Multitasking detection routines have been added to them so they'll behave nicely under multitasking environment.
