

**"Exemplar's Leonardo represents a new generation of design tools that are now part of our design flows and design tools sets. Over the last year, we defined our ASIC design environment requirements and began developing, certifying and testing our ASIC libraries with Exemplar's synthesis tools in answer to our customers' requests for a Windows NT-based ASIC synthesis solution. We plan to continue working with Exemplar to certify libraries and market our respective products."**

**Hideo Kikuchi**

**Fujitsu's ASIC Technology Director**
