VHDL for Synthesis Training on CD-ROM

Esperan's VHDLMasterClass is a self-paced CD-based multimedia tutorial that runs under Windows. It reduces the time required to learn VHDL by combining a multimedia tutorial with a series of design exercises. At the same time,MasterClass introduces the user to Exemplar Logic software through a series of Exemplar-specific lab exercises that illustrate how to use VHDL within the Exemplar Logic tool set. The tool also provides experienced VHDL designers with a fast, effective reference during VHDL-based projects. Please direct inquiries to info@exemplar.com or call at 510-337-3700.
