PowerShield™ ISDN Compatibility Guide

PowerShield™ ISDN Uninterruptible Power Supply provides battery backup for ISDN equipment connected to an ISDN network interface (NT-1), eliminating the risk of losing your phone service during a power blackout. It provides the power necessary to carry you through the interruption of your utility service and lets your business continue. In this way, you have the peace of mind you've always expected from your telephone service, while taking advantage of the state of the art in high speed data communications technology.

APC's PowerShield™ ISDN UPS is designed to work with ISDN equipment that uses "PS/2 power" (power over the ISDN cabling). If your equipment is not listed in the compatibility chart below, check to see if it uses PS/2 power before protecting it with a PowerShield ISDN UPS.

Company	Product Name / Part #
NT1 - PRODUCTS	
Adtran	NT1 ACE
Adtran	NT1 / T400
Alpha Telecom	UT620
AT&T Network Systems	NT1U-220
AT&T Network Systems	NT1L-230
AT&T Network Systems	NT1B-300
Cortelco, Inc.	NT1 (500300-760-101)
