

Introducing AccuFeed™ & AccuFeed Plus™

*New high-volume document feeders
from Bell & Howell*

Pump up the Volume

AccuFeed™ and AccuFeed Plus™ are designed for increased productivity in document scanning. These feeders are aimed at production-level imaging applications that process more than 1,000 documents a day.

Rollin', Rollin', Rollin'

For maximum productivity, power-driven reverse rollers on the AccuFeed and AccuFeed Plus provide superior paper separation to reduce the occurrence of paper skew and double feeds.

Well-Adjusted

Levers on the AccuFeed and AccuFeed Plus enable operators to quickly fine-tune the feeders for varying paper weights between batches. The lever makes it easier to feed larger batches of similar kinds of documents.

Copiscan II™ Compatible

Both feeders are built for our popular Copiscan II line of high-speed document scanners. Copiscan II users can upgrade a previous Bell & Howell ADF-100 or ADF-500 document feeder to either of the new AccuFeed models.
