

Data Sheet

Data Encryption between Multiple PIX Systems Turns the Internet into a Secure Virtual Private Network

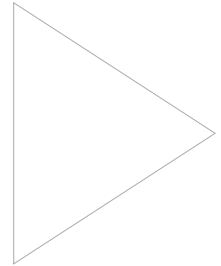

Cisco Systems' PIX Private Link is an encryption card for the PIX Firewall that allows users to communicate in total privacy. This card provides a secure, data-encrypted IP connection between up to 256 PIX Firewalls located at IP-connected sites. The Cisco PIX Private Link Card supports the Data Encryption Standard (DES) algorithm in hardware for maximum performance. The PIX Private Link turns the Internet into a secure Virtual Private Network (VPN).

With PIX Private Link, customers avoid the expense and long lead times of leased lines and value-add networks (VANs). Additional savings accrue when remote office LAN clients transparently use PIX Private Link to securely connect over the Internet, rather than using dedicated banks of modems.

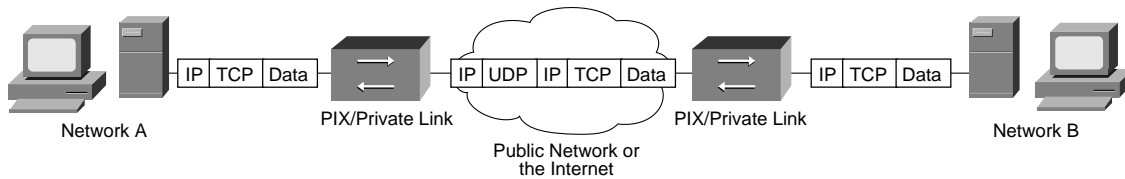

PIX Private Link shares PIX Firewall's design philosophy: It's streamlined, for high performance on today's T1 lines and beyond. It's reliable, to support 24 hours a day, 7 days a week network requirements. The two-command setup frees valuable system administrator time. Best of all, Private Link sits securely within the PIX, a UNIX-free environment immune to today's busy hackers.

PIX Private Link

PIX Private Link used in conjunction with PIX Firewall conceals sensitive data—on the LAN or over untrusted networks—from unauthorized eyes.

Features

- Builds private, encrypted tunnels through any public, untrusted IP network
- Provides secure redundancy over WAN
- Compatible with existing PIX Firewall systems
- Directly connects up to 256 other sites
- Easy two-command setup
- Sets a new standard in affordability

Product Model

- PIX-PL

Benefits

- Securely connects headquarters with remote sites
- Builds VPNs over the Internet's multiple paths rather than point-to-point leased lines
- Eliminates lead times for dedicated circuits
- Features easy installation with no maintenance
- Nonintrusive and completely self-contained—transparent to users
- Links multiple locations quickly and inexpensively
- High-speed throughput for today's T1 lines and beyond
- Private Link, protected by its PIX Firewall environment, is immune to UNIX security breaches
