# Creative Video WebPhone™ 3.0

The Easiest Way to Communicate Over the Web with Voice & Video!

Creative Video WebPhone™ 3.0 is the easiest way to communicate over the Web with voice and video. Simply type in a WebPhone user's e-mail address or search a list of all online WebPhone users and start communicating instantly.

Voice and Video over the Net! Video WebPhone lets you talk to any other WebPhone users on the Net and view other callers even if you don't have a video camera. If you want to send video so others can see you, simply install the appropriate video hardware and start enjoying two-way video conferencing.

No long distance phone charges! Whether you're talking to someone next door, across town, or anywhere in the world, you only pay for your local Internet access time.

Works like a regular phone! With Video WebPhone, you can put someone on hold, set up a voice mail system, and store frequently dialed numbers in a directory. You also get standard phone features like do-not-disturb, redial, mute, and speed dialing.

Simple design! The Video WebPhone uses a familiar phone design so you can quickly and easily locate the features you need.

Animated Help! Much better than static text help, WebPhone's help system uses animation to show you exactly how to use every feature.

Two-way conversations! With Video WebPhone's full-duplex support, you and your caller can talk to each other at the same time.
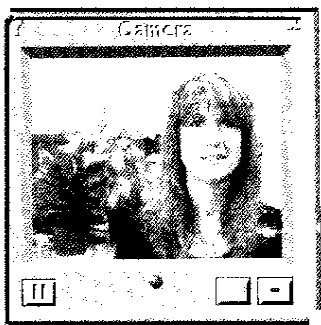

Features:

✳ Place calls over the Web by simply typing a WebPhone user's e-mail address

✳ Conversations come alive with color video

✳ Use a local Internet connection to make free long distance video and voice calls

✳ Powerful phone features including caller ID, speed dial, and do-not-disturb

✳ Voice mail system takes messages and plays personal greetings

CREATIVE®
