

Digital Radar

FOR WINDOWS® 95 AND MAC™ OS

Keeps Watch While you're Away

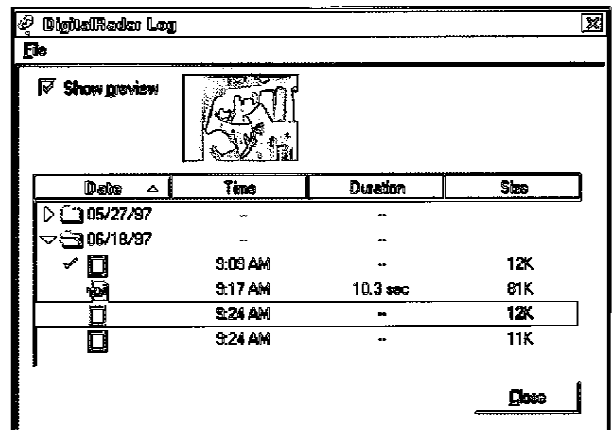

Connectix DigitalRadar™ is the easy way to keep watch over your personal space. Whether you step out of your office for a minute, or you're gone for a week, DigitalRadar's motion detector lets your computer keep an eye on things.

DigitalRadar is a software application that works in conjunction with most tethered digital video cameras. Video is automatically recorded when someone enters your work area. And DigitalRadar knows just what to do: record silently, play a customized message, or sound an alarm.

Thousands of Uses

- See who stopped by when you were out
- Track your missing CD
- Catch someone browsing through your file folders
- Play a personalized audio message to surprise visitors
- Discover your secret admirer leaving flowers
- Find out who borrowed those Zip™ disks
- Watch as candy disappears from your jar

Just activate DigitalRadar and it starts tracking any movement. When video or still pictures are recorded, a log is created. Once you return, the log is available for you to browse. Choose a file in the log, open it and you'll find out who's been borrowing your stuff.

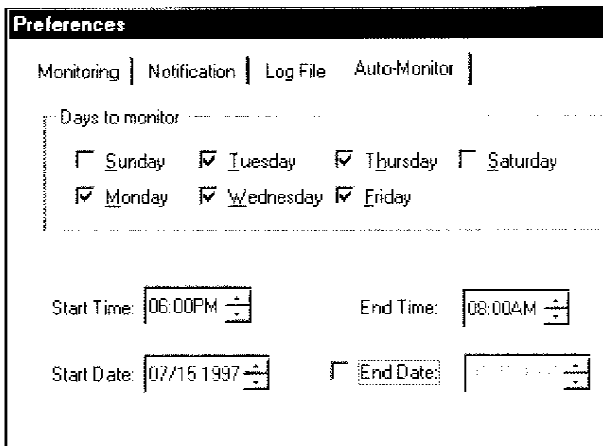

DigitalRadar keeps a log of movement it observes—you can then preview all events and find out who borrowed your dictionary.

Digital Radar

FOR WINDOWS® 95 AND MAC™ OS

Works When You Want it To

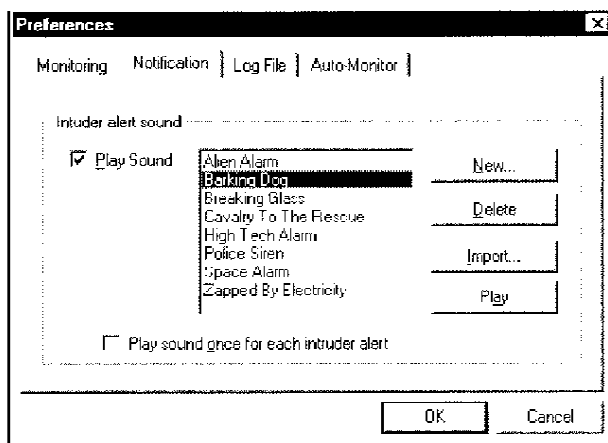

The Auto-Monitoring function lets you schedule DigitalRadar for automatic surveillance that goes to work when you're not around. Work the day shift, let DigitalRadar work the night shift.

DigitalRadar's auto-scheduling makes it easy to keep an eye on activity even while you're on the road.

Notify with Audible Alerts

When DigitalRadar senses activity, you can also have it sound an alarm or play a customized message. Just choose a predefined sound or record your own.

With DigitalRadar's Notification, play a customize message or sound an alarm when someone enters your work area.

Additional Features

- Password protected so only you can change the program settings
- Begins monitoring manually with a click of a button or follows your customized schedule
- Calibrates to your defined threshold level of movement

System and Hardware Requirements

Windows® 95 Version

- 486/66 or faster processor
- Microsoft Windows 95
- 12 MB of physical RAM; 10 MB of free hard disk space
