

PLUS PC COMPANION™

Add a second Keyboard, Monitor, & Mouse to your PC as far as 600 feet away!

- ▶ Supports up to 1280 x 1024 non-interlaced resolution
- ▶ Supports IBM PC/AT, PS/2 OR 100% Compatibles; Serial or PS/2 mouse
- ▶ Combine monochrome and color VGA/SVGA/XGA monitors

Access your Computer from a Second Location

Ever wish you could work on your computer from your office **or** from the lab down the hall? With PC-Companion Plus, you can access your computer from a second location as far as 600 feet away! Your second keyboard, monitor and mouse will act exactly as if they were connected directly to your computer. Now you can keep your computer close at hand—even when it isn't!

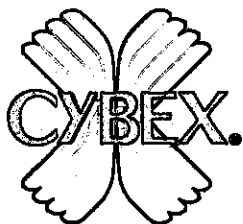

Fully Configurable to Meet your Requirements

PC-Companion Plus is designed to work the way you do. One simple switch can be configured four different ways to maximize your privacy options; prohibit unwanted viewing or interruptions from your inactive workstation, or allow full access from either location. Complete control over data access is always in your hands.

Fits Easily into your Existing Configuration

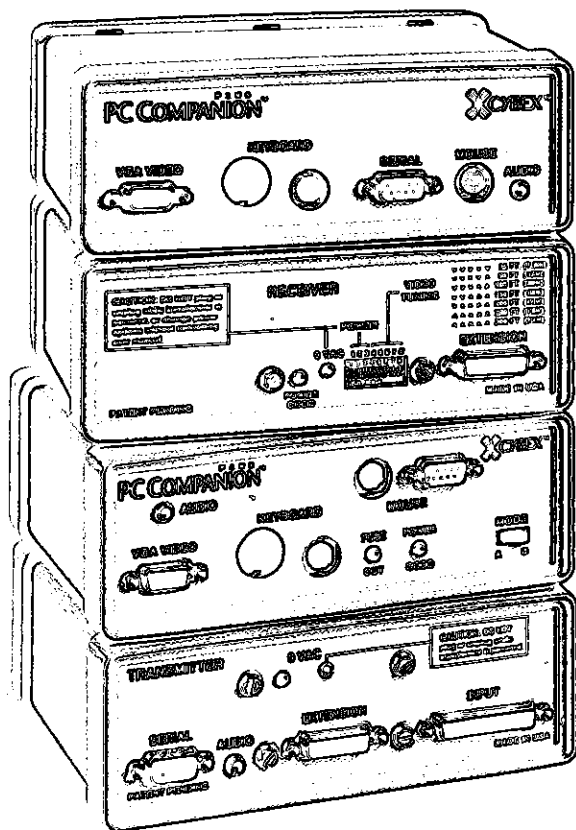

Compatible with your existing equipment, PC-Companion Plus supports both monochrome and color VGA monitors simultaneously and either PS/2 or serial mice. No expensive networks, complicated software or multiple computers are required. Just connect the cables, and place your second set of peripherals wherever you need them the most.

PLUS PC COMPANION™

To order, consult the table below. Plenum cable may be required by local building codes.

Need more than two workstations for your computer? Ask about our PC-Expander Plus!

Transmitter and receiver, front and rear views.

A PC-Companion Plus system consists of a transmitter at the computer and a receiver at your remote location, linked by an extension cable. An input cable connects the transmitter to your computer; a 9 VAC transformer powers the receiver.

Either PS/2 style or serial mice are supported. Both mice must be of the same type and correspond to the PC-Companion Plus part number ordered. Instead of a serial mouse, certain other serial devices may be used or stereophonic audio may be transmitted via 3.5 mm stereo jacks. Monochrome or color VGA monitors may be used at either location in any combination. Workstations may be used simultaneously for viewing only.

IBM, PC/AT and PS/2 are registered trademarks of International Business Machines Corporation. Companion, Expander and all part numbers are trademarks of Cybex Computer Products Corporation. Cybex is a registered trademark of Cybex Computer Products Corporation.
