

Dayna®

NETWORK STARTER **KIT**

8-PORT HUB | network adapters

Dayna's Network Starter Kits are the perfect way to create your own small network or expand an existing network. The kits include everything you need to connect your computers and printers together and take advantage

of the benefits of networking. In a matter of minutes, you can begin sharing printers, files and information, CD-ROMs, modems, and storage devices with Dayna's Network Starter Kit.

▼ Everything You Need

The Dayna Network Starter Kit includes everything you need to get your network up and running in minutes. Network Starter Kits include a DaynaSTAR MiniHub-8, three DaynaPORT ISA or PCI cards, three 50' cables, and a guide to help you set up your network quickly and easily. With networking software that is already on your Windows95 or MacOS computer, you can easily set up your own network.

▼ Two Kits Available

Network Starter Kits come in two configurations, with three ISA cards for connecting PC-compatible computers, or with three PCI cards for connecting either PC-compatible or Macintosh-compatible computers.

▼ Plug and Play

Dayna's network adapters and hubs are designed for plug and play networking, which means that your network can be up and running minutes after you open the box.

▼ Expandable

Network Starter Kits come with an eight-port hub, so there is room for your network to grow. And with the MiniHub's special cross-over port, you can expand your network even more by connecting to other hubs, without special wiring.

▼ Helpful Status Lights

Lights on the hub represent network connection (link), network activity, errors (collision), port status, and power, allowing you to check the condition of your network at a glance. Link and activity lights on the network adapters give you a status for each adapter card.

▼ Lifetime Warranty and FREE Technical Service

The Network Starter Kit is backed by a lifetime warranty and one-on-one, friendly technical support at no extra charge.
