

# Intel InBusiness™ Internet Station

- **Cost-Effectively Share Internet Access**
- **Set Up in Minutes**
- **Uses Analog or ISDN Modems**
- **Stack and Connect with SureStack™ Design**

The Intel InBusiness™ Internet Station is the ultimate way to connect your computers to the Internet.

Cost-effectively share one analog or ISDN connection,

one phone line, and one Internet account over the network. Use two additional modems to connect to bulletin boards, access remote servers, and fax from your own computer.

## **Cost-Effective Internet Access**

→ The Internet Station provides affordable access for all the computers in your office to simultaneously access the Internet. This means that everyone on the network can enjoy access to the Internet from their own computer.

## **Simple, Simple Setup**

→ Browser-based configuration software walks you through a simple configuration including short, easy-to-understand questions. This software also manages automatic disconnect times during periods of inactivity. Beginner and Advanced settings give you multiple levels of control as Internet access needs change. The Internet Station's InstantIP™ technology automatically takes care of all network configuration.

## **Grows With Your Needs**

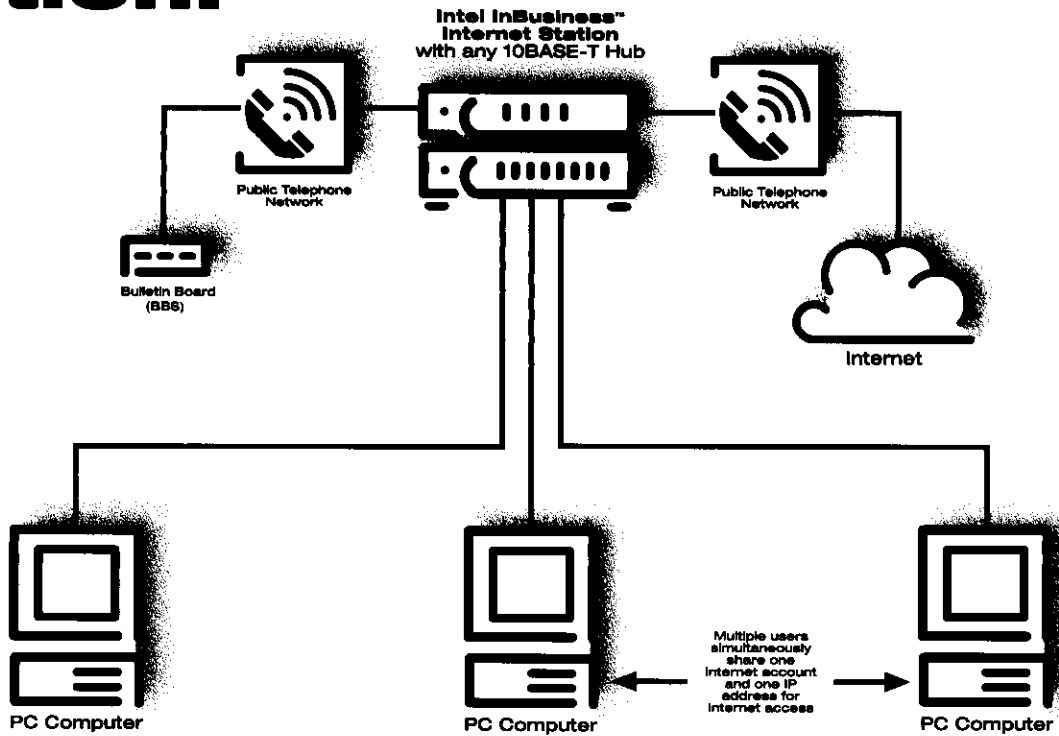

→ The Internet Station uses either analog or ISDN modems, so it can change with the needs of your business. The Internet Station can also be upgraded with new features to preserve your investment.

## **Multiple Functions**

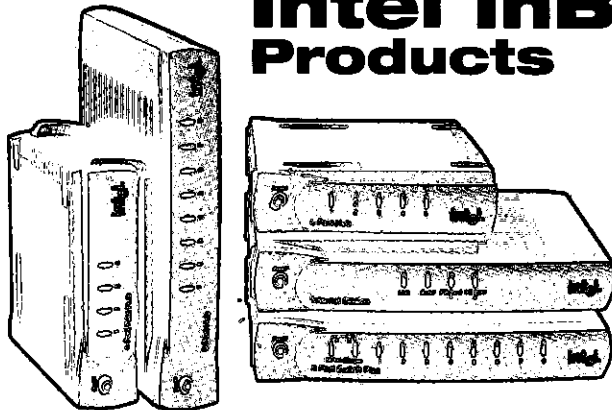

→ The Internet Station is more than just an Internet router. Use it to access shared modems, a shared Internet connection, or both simultaneously. It houses up to two PC Card (PCMCIA) modems and also includes a serial connection.
