NETSHIELD SECURITY (NSS) SUITE™

Comprehensive Network Protection

NetShield Security Suite offers the most comprehensive network protection available. Today's networked environments provide numerous opportunities for virus infection and security breaches. NSS is designed to offer total network protection at all points of entry.

NETSHIELD SECURITY SUITE

- | | |
|---|---|
| NetShield: Server Virus Protection | WebWall : Full Featured Firewall |
| GroupShield: Groupware Virus Protection For Notes and Exchange Servers | SecureCast: Automatic Internet Software Delivery |
| WebShield: Virus Protection For Internet Gateways | Me! Console: Software Updates, Distribution and Centralized Alerting |
| NetCrypto: Powerful Encryption For Network Data | |

NetShield, 100% Detection With Hunter Technology

The expense of cleaning a network-based infection can be staggering. Infected server files raise the ante on virus infections, rapidly expanding a desktop infection into a network virus outbreak. NetShield is a superior anti-virus solution for network servers which supports Windows NT, Windows NT for Digital's Alpha, NetWare 3.x and NetWare 4.x servers.

- Hunter Technology consistently achieves 100% detection of all viruses in leading lab tests
- Best detection rates for Word & Excel Macro Viruses
- Full support for Office 97 and 95 file formats
- Native NT system service on NT and NLM implementation for NetWare
- Supports real-time, scheduled and on-demand scanning
- Generates alerts to centralized console when viruses are detected

To protect your Unix servers, NSS also includes VirusScan for Unix which performs on-demand scans for PC files stored on Unix servers.

Protect Your Network
From Viruses and
Hackers at All Points
of Entry

The Worldwide Leader in
Network Security and
Management Solutions

By meeting the needs of today's distributed enterprise, McAfee has become one of the largest software companies in the world. Over 25 million people worldwide and most of the Fortune 1000, trust their enterprise to McAfee. McAfee is globally recognized as the market leader in anti-virus, security, network management and help desk solutions.

GroupShield: Anti-Virus For Notes & Exchange Servers

Microsoft Exchange and Lotus Notes provide robust ways for people to share information. Unfortunately, these environments are also prone to spreading macro viruses rapidly through a company. GroupShield protects native Exchange and Notes applications which scan and clean messages in real-time within mail stores, private folders and public folders.

- Comprehensive virus protection at all entry/exit points
- Includes Hunter technology which consistently detects 100% of the viruses in leading lab tests
- Real-time, scheduled and on-demand scanning of messages in selected mailboxes and public folders
- Robust alerting features inform administrators, senders and recipients of infected messages

WebShield: Internet Gateway Virus Protection

WebShield scans all inbound and outbound Internet e-mail, file transfers and web browsing traffic from a dedicated Intel system. Secure remote management allows for configuration and auditing from a trusted client using WebShield's intuitive graphical interface.

Custom virus notifications can be configured for all scanned services while infected files are optionally quarantined. WebShield also offers a Java filter to restrict untrusted applets. Virus patterns and scan engine updates can be made on the fly with no downtime to WebShield scanning. Completely transparent, WebShield requires no user training, no client software, no address changes and can not be by-passed.

NetCrypto: The Easy Way To Build A Virtual Private Network

Every day, user names, passwords, e-mail, financial and personnel information travels over your network or over the Internet in plain "clear" text. Anyone connected to the network can easily intercept, read, or even modify this information. "Snooping" a network is frighteningly simple and impossible to detect. NetCrypto puts an end to snoopers.

- Includes several built-in encryption algorithms, including up to 56-bit DES encryption internationally and 160-bit in the U.S. and Canada
- Uses Diffie-Hellman single session key exchange technology to eliminate key management
- Supports Windows NT , Windows 95 and popular Unix platforms

WebWall: Full Featured Firewall

Obtrusive and visible barriers become a challenge for users and often bypasses are discovered through trial and error. WebWall is completely transparent when permissions are granted and undefeatable when denied.

- Easiest to use interface in the industry, WebWall's Configuration Wizard lets you set up access control in minutes.
- Transparent address filtering on all TCP/IP traffic
- Network Address Translation to hide internal addresses from outsiders
- SMTP e-mail queuing and forwarding
- Event logging of all inbound and outbound traffic with alert mechanisms
- IPsec compatible for virtual private networking between participating systems
- Integrated WebShield virus scanning stops hackers and viruses with one application

Keep Up-To-Date With SecureCast Automatic Internet Software Delivery

New versions of NetShield Security Suite can be delivered to your desktop automatically using SecureCast, the world's first Internet software delivery service. This exciting feature does not require visiting Web sites or using FTP utilities; everything is delivered to you within hours after it is released. With 500 new viruses discovered every month , this service is an important part of keeping your protection up-to-date.
