

CD NetRecord™ for NetWare

Reliable CD Recording Software for Novell NetWare File Servers

S Store business information on write-once compact discs with CD NetRecord™ for NetWare from Meridian Data. The software includes Novell-certified NetWare Loadable Modules (NLMs) for the file server and Windows-based tools for directing the contents of individual CD-Recordable (CD-R) discs and managing the job queue for the network.

Easy to Install

The flexible and easy-to-use Windows-based installation software allows for loading of file server NLMs and Windows applications from any Windows-based computer on the network. Support is provided for installing user utility software to either a network directory or local hard disk drive. Complete uninstall is provided.

Reliable CD Recording

Meridian's server software architecture addresses the real-time

challenges inherent in recording compact discs over a network. The software manages a large directory staging area on a dedicated hard drive on the file server. The result is a robust system that reliably makes CDs regardless of network traffic or file server load.

Remote Management

Meridian's management software is a friendly Windows-based program providing system administrators with the detailed ability to view and manipulate the network-wide CD-R job queue and maintain logfile history for recorded CD jobs. Users are provided with an interface to select source directories and disc format properties.

Background Operation

CD NetRecord integrates to the NetWare Queue Management Services, allowing multiple job requests to be submitted indepen-

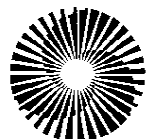

dently from authorized network users. Jobs may be submitted while another job is in process.

Support for Standards

CD NetRecord for NetWare integrates with standard NetWare services and device interfaces to provide support for popular SCSI CD-R drives and host adapters. Recorded discs are formatted in the industry-standard cross-platform ISO9660 CD ROM file structure, allowing the finished CDs to be read in millions of desktop and networked CD ROM drives, such as Meridian's CD NetROM™ subsystems. CD-R job creation and network job queue management is supported from Windows 3.x, Windows 95 and Windows NT v4.0 client computers.

Quality and Support

Meridian Data pioneered network CD-Recordable and CD ROM software technologies. The company has earned a reputation for product quality and our customer service team is the best in the business. All Meridian products are backed by our comprehensive Reliance Support Program, including one year warranty, toll-free hotline, World Wide Web home page and bulletin board service.

MERIDIAN

CD NetRecord™ for NetWare

System Requirements

Novell File Server	
Usage Type	Non-dedicated, may be installed on existing NetWare file servers.
Hardware	Intel-based 486/33 or higher processor with 32MB of system memory minimum and 2MB of hard disk space available, configured with one or more NetWare-compatible network adapters, console monitor and keyboard.
Operating System Software	Novell NetWare v3.12, v4.1 and higher.
Controller Interface	Dedicated, bus-mastering SCSI-II host adapter with a device driver 100% compatible with the NetWare media manager or HAM interface.
CD-Recordable and Hard Disk Drive	CD Recorder complying with the Orange Book specification with a SCSI-II controller interface, per published Meridian Data compatibility specification. Also requires one dedicated SCSI-II hard disk drive with a minimum capacity of 700MB to be connected to the same host controller as the CD-Recordable drive.
CD-Recordable media	Orange Book media certified by the drive manufacturer for use with the CD-R drive.

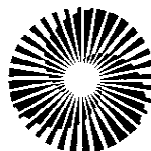

Remote Management Station & Graphical End User Station	
Usage Type	Non-dedicated, may be installed on existing Windows-capable computers.
Hardware	Intel-based 386/33 or higher processor with 8MB of system memory minimum and 1MB of hard disk space available, configured with a NetWare-compatible network adapter, Windows-compatible video graphics adapter, color graphics-capable monitor, keyboard and pointing device.
Operating System Software	Microsoft Windows v3.1 or v3.11, Windows for Workgroups, Windows 95 or Windows NT v4.0 configured with current Novell NetWare Device Drivers.

Starter package Contents:

- CD NetRecord for NetWare file server NLMs and Windows-based remote management application distributed on a 3.5" high-density floppy diskette
- License agreement to install and use the file server NLMs on one server and license agreement to install and use the Windows-based application on the entire network
- Administrative documentation
- Product registration card

Optional Software:

- CD Net* for NetWare Software enables multiple CD ROM drives to be connected to the Novell file server. Advanced Windows-based remote configuration and management tools for CD ROM drives, logical NetWare volumes and applications are included.
