# The Next-Generation Standards-based
E-Mail Client for Windows

Z-Mail® Pro

Z-Mail® Pro is NetManage's award-winning e-mail client for the Microsoft® Windows platform. Without peer, Z-Mail Pro is the best and the most complete Internet/Intranet e-mail client available. It lets you send and receive HTML messages containing multimedia content and live hypertext links. On command, it automatically forwards, files or deletes your incoming messages. Z-Mail Pro integrates with NetManage's ECCO Pro®, a personal/workgroup information manager, and comes packaged with Forum, a newsreader client for threaded discussions. Z-Mail Pro also supports all popular e-mail and messaging protocols–POP3, SMTP, NNTP, and the newest, IMAP4–the backbone of electronic mail. Z-Mail Pro provides seamless messaging and connectivity throughout Intranets, Extranets and across the Internet.

The Z-Mail Pro Advantage

- *A complete solution for message-based collaboration which integrates web technologies, information management, and discussion forums.*

- *Multimedia-rich HTML messages increase communication effectiveness.*

- *An intuitive interface and powerful e-mail management tools increase user efficiency.*

- *Multi-threaded operations deliver a versatile and high performance e-mail client.*

- *Standards-based transmission methods ensure reliable connectivity over the Internet and protection of your long-term investment.*

- *Low cost of ownership is achieved with automatic setup tools and the use of online technical support.*

- *Support Wizard provides built-in online access to your help desk or NetManage support, cutting your downtime and support.*

Z-Mail Pro

Powerful Features Ensure Maximum Productivity

Z-Mail Pro combines powerful tools for handling large volumes of mail with a well designed and intuitive user interface that helps users stay productive. Z-Mail Pro's multi-pane view conveniently displays the status of local and remote folders, along with their contents. Drag-and-drop functionality lets users instantly reorganize messages from folder to folder. Zip-Encrypt delivers a quick and simple method of attaching documents and defining compression and encryption preferences. Z-Mail Pro's powerful, yet easy-to-use search utility simultaneously scans any number of files on local and remote folders based on flexible criteria.

Leading edge technologies such as IMAP4 and DES encryption enable centralized message storage and ensure privacy.

All Windows platforms on a single CD to meet your needs now and in the future.

Address book and centralized directory services ensure easy access

Z-Mail Pro provides a flexible address book structure for storing and accessing personal and business e-mail contacts, linking to ECCO Pro Phonebooks, or referencing subscribed newsgroups. In addition, Z-Mail Pro's open standards architecture lets you access remote or centralized corporate e-mail directories using Whois++ or Open Directory Services (ODS). ODS is a NetManage protocol that makes standards-based or non-standards-based corporate directory information accessible via the Z-Mail Pro address book.

Rules and filters automate the mail-handling process

Over the last few years, as e-mail became a popular medium for corporate as well as global communications, e-mail users began to receive ever-increasing amounts of mail. Z-Mail Pro provides powerful mail rules and filters designed to manage the highest volumes of incoming mail. Filters automate the process of deleting, forwarding or filing messages in specified folders. An integrated Visual Basic®

Scripting application allows further, even complex, customization of tasks. You can easily create scripts that perform a number of functions, including sending custom replies, managing "kill files" and smart "on vacation" autoresponders, and launching external applications.

Mobile users enjoy cutting-edge technology for world-class performance

Mobile users get top performance from the Z-Mail Pro client. Exercise total control over your e-mail at all times, including complete offline composition, response, forwarding and deletion of messages. Z-Mail Pro will automatically carry out your orders when you reconnect to your mail server.

Multimedia gives your messages maximum impact

Z-Mail Pro lets you compose multimedia-rich HTML documents within your e-mail message window. You can create messages with colorful background images, richly formatted text and tables, embedded graphic images, lists, and live hypertext links. You can read HTML messages, and even follow their links onto the World Wide Web from within Z-Mail Pro or by using your preferred browser. Naturally, Z-Mail Pro interoperates with HTML messages that originate in other popular e-mail clients.

Z-Mail Pro also lets you experience multimedia attachments seamlessly. Its bundled utilities–NEWTSound for sound attachments, and NEWTView for viewing graphical attachments are started automatically whenever you double-click on an attached sound or graphics file.

IMAP4 revolutionizes mail access

Internet Message Access Protocol 4 (IMAP4) is rapidly becoming the standard in messaging technologies for centralized storage of messages. It enables users to keep personal or shared mailboxes on a remote server. As a result, users can access their mail from a number of machines and locales, without fear of messages ever being in an unreachable location. This feature is critical, as e-mail has become an important legal and intellectual property resource.

Z-MailPro includes Forum Client, a high-performance newsreader

A Complete Collaboration Solution

Z-Mail Pro integrates with ECCO Pro, NetManage's Personal Information Manager (PIM), and Z-Mail Pro's own Internet newsreader, Forum. ECCO Pro utilizes Z-Mail Pro as a transport mechanism for sharing and synchronizing files and accessing group calendars and schedules. The Z-Mail Pro address book can access ECCO Pro phonebooks for e-mail address information. You can even "hot link" e-mail messages into ECCO notepads for quick reference.

Forum, a high-performance newsreader, provides a threaded discussion structure and offers multimedia-rich HTML support for creating and exchanging messages in any Usenet or private newsgroup.

POP3, SMTP and NNTP provide standards-based plug-and-play solutions

Post Office Protocol (POP3), Simple Mail Transport Protocol (SMTP), and Network News Transfer Protocol (NNTP) are the traditional transports for mail and message exchanges over the Intranet, Extranet and the Internet. Z-Mail Pro's support for these standards ensures users global connectivity to other e-mail systems, and enables users to easily participate in private and public network newsgroups and discussion forums.

Z-Mail Pro

organizes and

e-mail messages

so you are more

productive.

Low Cost of Ownership

Z-Mail Pro is built on open standards, ensuring global connectivity to the Internet and eliminating the need for gateways and other expensive messaging accessories. This reduces the costs of both initial investments and lifetime maintenance.

The Z-Mail family of clients is standards-based and offers a wide range of platform support, providing a solution that is inherently scaleable across large corporations. Z-Mail clients are available for Windows 3.1, 95 and NT as well as for UNIX (Motif 1.2 and character terminals) and Macintosh.

Guarantee of world-class support

Z-Mail Pro is backed by a global team of highly professional technical and support personnel so your questions can be answered anytime of the day, no matter where you are located. NetManage's commitment to advanced online support aids, like Support Wizard, gives our support technicians leverage in diagnosing user problems.

Z-Mail Pro

Z-Mail Pro includes everything you need:

Set-up, Configuration and Administration
- Selective Installation
- Multiple user accounts
- Automatic setup for network installations
- Uninstaller (32-bit only)

Dialup (Windows 3.1 only)
Interfaces: SLIP, CSLIP, PPP, WinISDN
Options: PAP, CHAP, VJ header compression

Z-Mail Pro Administration
- Merges, compacts and generates mailboxes
- Rebuilds folder information
- Removes unmatched entries

Mailbox Converter
Convert messages stored in Z-Mail 4.0, cc:Mail, Eudora, mailbox, PROFS and UNIX formats.

Flexible Addressing and Multiple Identities
- Local, Whois++ and ODS network address book configuration options
- Multiple address books

Mail Alias Viewer
Determines members of e-mail alias lists

Composition Facilities
- Multimedia-rich HTML e-mail
- Mail privacy (DES 40 encryption)
- Spell checker
- Return receipts and read confirmations
- Message priorities
- Message routing
- Desktop Integration
- MAPI
- Supports Windows 95 & NT's "Send To" for automatic compression and encryption of attachments from desktop and Windows Explorer

Message Processing Capabilities
- Rules and filters for incoming messages
- Search capabilities
- Sort by date, topic or sender

VBA Script Editor and Player
- Program development environment with graphical assist for writing Visual Basic for Applications compliant scripts
- Extends rules processing abilities

Forum Internet Newsreader
- Multimedia-rich HTML composition
- Threaded discussion support
- "Discussion" button links Z-Mail Pro with Forum

NEWTView
Graphics viewer supports the following formats: gif, tiff, pcx, dcx, xbmp, bmp, dib, wpg, and pct

NEWTSound
Sound player with support for the following formats: au, mod, snd, voc, wav

Tag-It!
For important messages, yellow "sticky pad" style message forms appear on top of all recipients' windows

Phone Tag
Phone message forms

Remote and Offline Processing
- Offline composition and viewing of e-mail
- Offline folder administration is processed automatically when reconnected to the server
- Automatic e-mail address checking
- User controls when messages are sent with Pause command

Supports Popular Messaging Standards
- IMAP4 (RFC 1730)
- POP2 (RFC 937)
- POP3 (RFC 1460)
- SMTP (RFC 821, 822)
- MIME attachments (RFC 1521)
- NNTP (RFC 977, 1036)

Hardware Requirements
(minimum configuration):
- IBM PC (or compatible computer)
- 486 50MHz or higher processor capable of running Microsoft Windows 3.1, 95 or NT
- 8MB RAM minimum
- 32 MB hard drive space (for full installation) CD ROM drive

Software Requirements:
Microsoft Windows 3.1, or higher; Microsoft Windows 95; Microsoft Windows NT 3.51 or NT 4.0

Chameleon TCP/IP or any other WinSock 1.1 compliant Networking package (included with Windows 95 & NT)
