

REPLEX™

CD-Duplication System

Flexible - Compatible - Reliable

Features

- Complete solution for CD replication includes:
 - Drives - PlexWriter* 2x4 CD-R
- 12PleX* CD-ROM
 - Pre-mastering software
 - CD-Duplication software
 - Bus-mastering SCSI controller
 - CD-R media
- Two units available:
 - Up to six PlexWriter CD-R drives and one 12PleX CD-ROM drive installed in Plextor's Hot-Swap Tower casing
 - Three PlexWriter 2x4 CD-R drives installed in standard tower casing
- SCSI-2 compliant
- Compatible with Windows NT and Windows 95
- Compatible with all disc formats except CD-Extra (CD-Plus), Enhanced CD, Photo CD & Video CD
- One-year warranty - parts and labor
- Toll-free technical support
1-800-886-3935

The REPLEX is a CD-ROM replicator that allows the user to write to multiple CD-R drives simultaneously in a single subsystem. The CD-R drives and one twelve speed CD-ROM drive are conveniently mounted in a single tower case. Simply connect the REPLEX to a host computer using standard SCSI connectors and SCSI host adapter. No expensive add-on hardware is required. (Plextor recommends minimum system configurations of Pentium with 16MB RAM and a dedicated PCI Bus-mastering SCSI host adapter.)

The REPLEX CD-ROM duplication system can also be used to pre-master an original CD. The source data can come from another CD, hard disk, network drives or other media. The master disc can then be used in the CD-ROM drive and copied to as many as six CD-R drives installed in the same subsystem. Alternatively, a CD image can be created on the hard drive and burned to as many as six CD-R drives in a single run.

*The REPLEX is powered by
Plextor's own award-winning drives!*
