

From the makers of PartitionMagic®

POWERQUEST

Drive Image™

The ultimate solution for duplicating your hard drive.

No More Risks or Hassles

Taking risks with your data is something you should never have to do. You know you need to take precautions to protect it - like performing regular backups - but doing so is often a time-consuming and frustrating process. And even if you're simply upgrading to a new hard drive, you can usually expect some inherent risks and hassles.

Drive Image, from PowerQuest, solves those problems for you with a fast and complete way to copy your hard drive. Using Drive Image, you can easily create and store a compressible backup file of your entire hard drive, or just the partitions you specify, to the medium of your choice. The image file can then be downloaded from the source to completely restore your operating systems, applications, and data, or just to make upgrading to a larger hard drive fast and incredibly easy.

Drive Image even includes PartitionMagic's resize technology so you can resize your partitions once after copying them to the destination drive.

A Risk-Free Guarantee

Try Drive Image for 60 days. If you're not convinced that it's the fastest, easiest way to backup, upgrade or recover your hard drive, return it to PowerQuest and get your money back. For more information, look us up at www.powerquest.com or call 1-800-379-2566.

Quick Backups and Complete System Recovery

When you need to back up the data on your hard drive, you don't want to spend all day doing it. Drive Image saves your precious time. Using its patent-pending SmartSector™ technology, Drive Image is up to two to three times faster than straight file-by-file, or sector-by-sector methods of copying because it copies only used sectors. This not only speeds up the entire process, it also saves valuable disk space. And after you've created an image file of your hard drive, you can easily store it on a second hard drive, JAZ, Zip, CD-ROM, or even a network drive for safe keeping.

Making regular backups of your hard drive is always a good idea, but a life saver if you should ever need to recover your operating systems, applications and data after a hard-drive crash. Drive Image makes full PC or server system recovery a snap because all you have to do is download the compressed image file of your hard drive from its storage source and you're ready to go. That's not only complete system recovery, it's complete peace of mind.

Fast, Easy and Safe Upgrades

With the price of new high-capacity hard drives at an all time low, upgrading has never been more affordable, and Drive Image makes the process a breeze. With just a few simple steps, Drive Image copies your current hard drive to your new drive while keeping every setting and byte of data safely in place. Nothing else can save you so much time, money and aggravation. Upgrading your system is finally fast, easy and safe.

PowerQuest also offers Drive Image Enterprise with multiple workstation or site licensing options available. Call 1-800-379-2566 for more information.

Drive Image is the fastest, easiest tool for complete hard-drive imaging. Its robust feature set makes it the perfect solution for backups, system recovery and easy hard-drive upgrades.

- Creates a compressible image file.
- Allows for storage on many types of media, including network drives, hard drives and removable media.
- Creates and restores an image file partition-by-partition, or as a complete hard drive.
- Change partition size once after copying to the destination drive.
- Ensures against data loss by checking the integrity of both the source drive and the target drive.
- Checks for and marks bad sectors on the target drive.
- Recognizes and handles long file names.
- Provides an easy-to-use graphical interface.
- Offers disk-to-disk copying within the same computer.
- Uses SmartSector™ technology to copy only used sectors for FAT, FAT32, NTFS, and HPFS.
- Allows for sector-by-sector copying for Linux, UNIX, and NetWare.
- Includes DriveMapper™ and MagicMover™ utilities.

Product Comparison Chart

| Features | PowerQuest DriveCopy | PowerQuest Drive Image | PowerQuest Drive Image Enterprise |
|--|-----------------------------|-------------------------------|--|
| Copy the entire contents of one drive to another drive within the same computer | X | X | X |
| Copy individual partitions or entire drive | | X | X |
| Create and restore hard-drive image files | | X | X |
| Create and store hard-drive image files for backup, upgrades and system recovery | | X | X |
| Change partition size once after copying to destination | | X | X |
| PartitionMagic's create, resize and move technology for use on the source or destination drive | | | X |
| Create and store image files to set up multiple workstations over a network | | | X |
| Drive Image File Editor | | | X |
| Multiple workstation or site licenses available | | | X |
