

Zipshot gives you complete control over video image capture, whether from a live scene,

pre-recorded video, or other video source.

Zipshot's full-color preview screen lets you make image adjustments in real-time, so your captures are picture—and pixel—perfect.

With its high-resolution capability (and powerful software suite compatibility), you can add compelling moving footage to a business presentation created with Microsoft's PowerPoint software; immortalize a head-first

slide from the World Series; or send your baby's first steps via e-mail to grandparents.

Zipshot makes the complex simple: need your insurance company to quickly see photos of flood damage?

Use the Zipshot to capture video stills and instantly send them by e-mail. Have to send advertising product comps to a faraway client? Zipshot makes digital capture, processing and transmission a cinch.

Want to post a picture of your home for sale on the Web? It's not a problem with Zipshot.

Features

- ▶ One-click capture from digital cameras*, camcorders, television or VCRs
- ▶ Edit images, create multimedia e-mail, or videoconference
- ▶ Easy parallel port installation for simple setup and fast transfer speed
- ▶ Accelerates download time from your digital camera from 30 to 60 seconds to less than 3 seconds!

Zipshot includes these valuable extras:

PhotoPrinter software for printing multiple copies of a photograph on a single sheet of paper

PhotoFantasy—add your face to over 100 supplied fantasy characters

Multimedia Email—send digital postcards with images, text, sound and video clips to friends

PhotoImpression—enhance your digital images with this easy-to-use editing tool

LiveCom (videoconferencing software)—videoconference with friends or colleagues through your regular phone lines or the Internet

*Requires video output

Still Images

View (and adjust) your pre-recorded video or live scenes on Zipshot's full-color preview screen, and capture the exact images you want.

Motion Video

Capture motion video as an editable AVI file with the click of a button*.

Time-elapse

Set the time-elapse function to capture a series of images over the course of minutes—or even hours—and let your Zipshot and camcorder or digital camera do the rest.

Continuous Image Capture

Capture split-second action or create a photo series with Zipshot's pinpoint control.

Video Conferencing

Turn your digital camera or camcorder into a mobile videoconferencing solution. (Zipshot supports all videoconferencing software compatible with Microsoft Video for Windows as well as MS Netmeeting.)

Instant Installation

With some capture devices, you sometimes need to disconnect your printer, reconnect and reboot your computer each time you want to capture an image and print. Zipshot shares your computer's parallel port with your printer and other devices so you don't need to reconfigure your system each time.

Where to Buy

Zipshot is distributed by Ricoh and can be found at most camera, office or retail outlets.

System Requirements

- 486 or Pentium-based PC
- Windows 3.1, 95 or NT
- 8 MB RAM
- CD-ROM drive
- 20 MB hard disk space
- 16- or 24-bit display card

Shipping Information
