Fast, Easy Server Recovery

	SINGLE SERVER EDITION	INTRANETWORK EDITION
File & Volume Recovery	☑	☑
Single Server Disaster Recovery	☑	☑
Multi-Server Disaster Recovery	☐	☑
High Speed Tape Drive Support	☐	☑
Autoloader Support	☐	☑

FEATURES

NEW IntranetWare and NetWare 4.11 ready
NEW Full 7X24 read and write availability
NEW Instant volume replication
NEW Live web server replication
NEW Stac Internet Central — proactive news and software updates over the Internet
NEW High performance DLT support
NEW Multiple concurrent drive support

UNIQUE, PROVEN, AWARD WINNING, WORLD-CLASS TECHNOLOGY
* Complete system protection — Disaster Recovery, Backup and Restore of:
  * Complete server
  * Disk partition information
  * DOS and NetWare OS
  * NDS or Bindery
  * All user data (including open files)
  * Deleted files (at user option)
* Simple, 3 key stroke disaster recovery
* Direct Media Access — secure end-user access to their own files
* Single Server Edition supports DDS 2-DAT— up to 60 MB/minute or 3.7 GB/hour Intranetwork Edition adds DLT tape drive support (9+GB/hour)

BENEFITS

NO Incremental backups
NO Server down time
NO Complex tape rotation schemes
NO Proprietary restore utilities
NO Backup window headaches
NO Large tape databases
NO RAID-like tape arrays
NO Protracted disaster recovery procedures
NO Out of date software
NO Scheduling user log offs
NO Open file errors
NO Skipped files
NO Business downtime
NO Sleepless nights — did the backup work?
NO Server hardware upgrade hassles

Stac's Replica Single Server and Intranetwork Editions offer complete, secure disaster recovery and tape backup protection for businesses or branch offices in NetWare environments. Compared to legacy file-by-file backup programs, Replica is a superior solution allowing you to store and protect data more reliably, efficiently and economically than ever before.

Replica is the fastest data protection software available today. Plus, it's exceptionally easy to use. And you'll find Replica's time and money saving opportunities to be extraordinary!

ADVANCED TECHNOLOGY PERMITS LIVE, ULTRA FAST REPLICATION

Replica's unique Object Replication Technology™ supports full read and write access to your server during replication. In fact, this technology is so advanced, and so fast, that complex incremental backup schemes can be eliminated.

Replica can backup entire NetWare servers or volumes at maximum speed to local tape or disk drives. The Intranetwork Edition also permits over the wire backup to tape or disk on a remote server.

SIMPLE, 3 KEY STROKE DISASTER RECOVERY

Many legacy file-by-file backup products don't backup key server information. Stac's Replica, however, protects everything. In the event of a disaster, Replica can restore the complete server including the boot volume, disk partitions, security (NDS/Bindery), DOS, NetWare, user

files and even files that were open during replication. Replica restores your system and data as fast as your tape drive can operate and then reboots the system.

Disaster recovery instructions are so simple, they fit on a Post-it™ note.

## INDIVIDUAL FILES EASILY RECOVERED FROM ANY DESKTOP

Stac's Replica Direct Media Access™ feature mounts tapes as NetWare volumes so that users can recover individual files themselves, using tools they are familiar with, like File Manager and Windows 95® Explorer. Even users that only know how to use a word processor can restore files directly from tape, thus freeing NetWare administrators from time-consuming restore tasks. And since the security object (NDS or Bindery) is also replicated, users can only see those files that they had access to on the original server.

Reduce the hassle!

EVER WONDER WHETHER YOU HAVE A COMPLETE AND VALID BACKUP TAPE?

Now with Stac's Replica you can finally create your own fire drills — at any time. Simply take your Replica tape to another server (of same or greater disk capacity) and recover the whole server in minutes — nothing is better than Replica at guaranteeing that you have complete protection.

Sleep well at night!

Stac

Volume Replication Speed		Disaster Recovery Time (1.26GB)	
DDS2 DAT Drive	62MB/min. or 3.7GB/hr.		33 minutes
8mm-5GB Tape Drive	57MB/min. or 3.4GB/hr.		40 minutes
DLT 10+GB Tape Drives**	150MB/min. or 9GB/hr.		22 minutes

0 1 2 3 4 5 6 7 8 9 10   0 10 20 30 40 50 60
**Requires Intranetwork Edition   Gigabytes per hour-larger is better.   Recovery time in minutes-smaller is better.

Replica is a top-performer in data transfer and disaster recovery. You can replicate data up to 9GB an hour. And you can restore 1.26GB of data in just 22 minutes.

NEW! FULL 7/24 AVAILABILITY ELIMINATES BUSINESS INTERRUPTIONS

There's no longer any need to interrupt the operation of your company's business to protect servers. No need to log off during backup. No open file errors or skipped backups of your most used (and often most important) files.

Critical data is never left unprotected!

NEW! INSTANT VOLUME REPLICATION PROTECTS AGAINST DATA CHANGES DURING BACKUP

Stac's Replica flushes the server cache and then captures all the volume information at the very instant replication begins. This ensures that your tape truly represents a "replica" of your server at a specific instant in time. This solves the "smear of data over several hours" problem that happens with old-fashioned file-by-file backup methods.

Demand an exact Replica of your system!
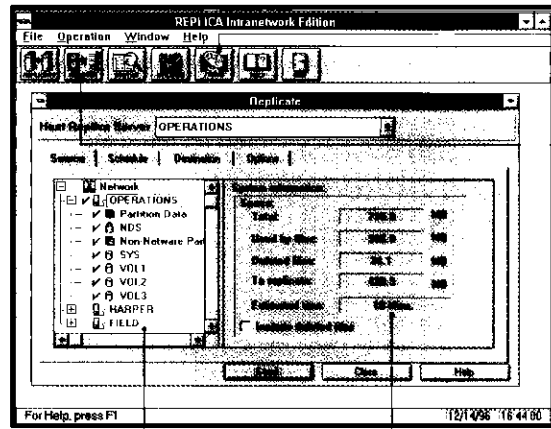

NEW! LIVE WEB SERVER PROTECTION

Stac's Replica ensures that all your NetWare and IntranetWare based Web servers can be protected without ever taking the server off-line. The web runs 7 days a week, 24-hours a day and you cannot afford to lose business while old-fashioned

file-by-file backup products lock customers out from accessing your site. Replica has been optimized for web and FTP server protection and to minimize business interruption.

You'll also benefit from our rapid disaster recovery should the worst happen!

NEW! NEVER OUT OF DATE OR OUT OF TOUCH

Stac Internet Central™ is a boon to overworked network administrators. Automatically, on a

→ Never out of date or out of touch

→ Recover your full server, volumes or individual files.

↓ Protect your complete system from one central location

↓ Just look how fast Replica transfers your data!

schedule you choose, and over your Internet connection, you'll always be kept up to date. At your desktop, you'll receive product news, complete update and patch information, tips, special offers, support information, beta test announcements and more.

NEW! INTRANETWORK EDITION EASILY PROTECTS REMOTE SERVERS

Now any number of remote servers (those without locally attached tape drives) can be protected with Replica's Intranetwork Edition. The complete server can be restored remotely including partition information, DOS, NetWare, NDS, user data and even deleted files.

NEW! INTRANETWORK EDITION OFFERS EXTENDED SUPPORT FOR DLT DRIVES AND AUTOLOADERS

Stac's Replica Intranetwork Edition supports DLT drives, autoloaders and multiple concurrent drive operation. And any tape drive can be run at its full rated speed — i.e. a DLT drive will run at over 9 gigabytes per hour, no matter if your files are big or small.

FAMOUS STAC RELIABILITY

Stac is a worldwide leader in data protection. Chances are, you're already a Stac customer. Patented Stac technology is proven safe and reliable by millions of users every day. It is built into some of the world's most powerful products — operating systems, tape drives, system software, bridges/routers and modems.

Your company relies on you for data protection. You can rely on Stac.

THE REPLICA GUARANTEE

Stac guarantees Replica's performance and quality or your money back. If you are not satisfied, just call your Stac sales representative within 60 days of purchase for a prompt refund.

SYSTEM REQUIREMENTS:

HOST SERVER NLMS
Operating System: NetWare 4.11, 4.1, 3.12 or IntranetWare
RAM: 16 MB minimum
Disk Space: At least 5 MB free
CPU: 386 or higher
Other: ASPI compliant SCSI controller. At least one supported backup device. 1.44 MB floppy

REMOTE SERVER NLMS (INTRANETWORK EDITION)
Operating System: NetWare 4.11, 4.1, 3.12 or IntranetWare
RAM: 16 MB minimum
Disk Space: 2 MB free
CPU: 386 or higher
Other: 1.44 MB floppy. Network connection to Replica host server

ADMINISTRATOR WORKSTATION
Operating System: Windows 95, Windows for Workgroups or Windows 3.1
RAM: 8 MB minimum
Disk Space: 4 MB free
CPU: 386 or higher
Other: 1.44 MB floppy. Network connection to Replica host server

DEVICE SUPPORT
• SCSI-based QIC, 8mm and DAT (DLT tape drives on Intranetwork Edition)
• Autoloaders (requires Intranetwork Edition)
• Magneto-optical drives
• SCSI, IDE, and ESDI hard disks.
