# Build Robust Java™ Applications with Instant Database Connectivity

Symantec Visual Café™ for Java™ Database Development Edition is the most powerful Java development solution for databases.

The Most Powerful Java Development Solution for Databases

- Database Wizards, Templates, JavaBeans™ & JFC

- Native Support for Oracle, Informix, Sybase & Microsoft SQL Server

- Connect to Over 30 Databases through ODBC

- Incremental Debugging & Native x86 Compiler

- 100% JDBC™ Compliant Middleware

Complete Kit Includes:

- **JDK™ 1.1 and JavaBeans Support**

- Visual Café for Java Integrated Development Environment

- dbANYWHERE™ Server (25 Connection Limit*)

- Netscape FastTrack Web Server

- Netscape Communicator

- Sybase SQL Anywhere

- Visual Page™ HTML Authoring Tool

*Unlimited connections available from Symantec

The Next-Generation Java™ Development Solution.

Symantec, the leader in Java Development tools has enhanced its award-winning product with more than 100 reusable components and 20 database templates to dramatically shorten development cycles. Create industrial strength Java applications and connect to multiple databases with the click of a button. Intuitive, powerful and easy to learn.

Fully-integrated Java and database development. Symantec Visual Café for Java – Database Development Edition is the most user-friendly and productive Java and database development environment available. Now you can build full-scale Web and Java database applications in a single, visual environment.

Speed development with visual database tools. Produce powerful database applications instantly. The dbAware Wizard walks you through the entire process. Create Web forms on top of existing tables in minutes. The powerful API provides a rich set of database functions such as scrollable cursors, master-detail relations, Data Manipulation Logic and optimistic concurrency. Code is generated automatically and can be altered for more complex scenarios.

Develop using the latest Java technology. Choose from a library of 20 customizable database templates. Enhanced debugging tools offer remote debugging and multi-thread support, as well as a unique incremental debugger that lets you keep coding while you debug. Fully integrated support for JDK™ 1.1 (Java Development Kit), JAR (Java Archive) and JavaBeans™ Includes the industry's fastest compilers.

Get open database connectivity. Included is dbANYWHERE™ Server – a middleware database server which supports JDBC™ and has native drivers to Oracle, Informix, Sybase, Microsoft SQL Server and ODBC support to 30+ databases. The dbANYWHERE Server is limited to 25 connections; an unlimited Server is available from Symantec. Also included is Sybase SQL Anywhere Professional database and unlimited connections to SQL Anywhere and Microsoft Access.

Swift, scalable data access. The dbANYWHERE Server's true three-tier architecture lets thin applications run on clients, with no client-side drivers required, and dbANYWHERE's data caching enables bandwidth flexibility. All clients need is a Java-enabled browser, so management is a snap and client software costs are reduced.
