JES MINI-CHANGER CD ROM TOWERS

These systems are a unique hybrid between CD ROM Towers and standard Jukeboxes. The Nakamichi drive is a standard 5.25 CD ROM drive size that holds four CD ROM disks instead of one. A seven drive Tower can now hold up to 28 CD ROM disks. The internal drive is a **Nakamichi 8X CD ROM** and the disk change takes place in less than 2 seconds. You now have a high capacity high performance CD ROM sub system with a small footprint. **Our current Minichanger Towers SKUed and stocked at Tech Data.** (other custom configurations are available through special order): Prices effective 1/1/97

JES
HARDWARE SOLUTIONS

STANDALONE TOWERS

Standalone systems are generally used for Peer to Peer systems or with standalone machines.

Your customer must supply the following:

- SCSI controller for either IBM or MAC (FWB JACKHAMMER)
- An interface cable. The tower has an APPLE SCSI connector (50 pin Centronic)
- CD ROM device drivers. (usually included with the SCSI adapter)

Our current standalone products SKUed and stocked at Tech Data (other custom configurations are available through special order): Prices effective 1/1/97 Call for updated pricing
