Pilot™
The Connected Organizer

Wide-area connectivity for wide-ranging productivity.
Increase your PalmPilot's connectivity with remote network access.

Network HotSync™

In today's corporate environments, everyone's on the move. But whether it's office to office, building to building, or campus to campus, you can stay in touch with Network HotSync™ technology. Either through a dial-in server, or direct through your local or wide-area network, one tap on PalmPilot's cradle lets you synchronize schedules, download e-mail and stay on top of your busy life.

Enhance Your Mobility.
Here's a truly affordable way to take advantage of the mobility of your PalmPilot connected organizer. Network HotSync lets you synchronize your e-mail, date book, address book, expenses and memos–all the information that helps you stay organized–right through your company's network. Think of it as instant remote network access in the palm of your hand.

Dial-in For Fast Synchronization.
With Network HotSync, remote access to your information is a modem connection away. By dialing into your network (with your assigned PPP account), remote access to your schedule, e-mail, all your important information, is easy. No more wondering if your assistant changed your schedule while you were out. No more being out of touch with your e-mail.

Supported Dial-in Servers:
U.S. Robotics
3Com
Ascend
Cisco
Shiva
Windows NT RAS
Or most standard RAS servers.

Use Your LAN Or WAN To Stay Organized.
Any network equipped with PalmPilot organizers and Network HotSync can be a more "wired" group. On most local-area (LAN) and wide-area (WAN) networks, Network HotSync synchronizes with the same simplicity as if you were sitting at your desk. Just find an available PalmPilot docking cradle† on a colleague's desk, drop in your PalmPilot and push the HotSync button. The network will find your PC and HotSync will automatically update your data. It's that easy.

No Dedicated Lines Necessary.
With Network HotSync, you won't need your IT department to add a dedicated phoneline at your desk to give you the remote access capabilities you need. That's an important money-saver for your company.

True Compatibility.
Network HotSync is compatible with most standard Windows desktop systems, LAN and WAN networks, and popular e-mail and personal information management applications. As far as your company's network operators are concerned, it's virtually invisible.

Get Connected Over A LAN Or WAN! Visit our web site @ www.usr.com/palm or call 1-800-881-7256 for more information.

Dial-in To Network Connectivity.
Dial into your corporate remote access server (RAS) to reach your desktop computer and synchronize information fast. There's no hardware or network software to install, so connecting is easy.

Tap Into Enterprise Organization.
Your LAN or WAN network can be a highway to the important data on your PC. Just place your PalmPilot into another network-attached cradle† and synchronize from another floor, another building, even another city.

Stay in Touch With The Office.
No matter where you are, Network HotSync™ keeps you in touch with your schedule, your e-mail* and all your important information–right over your company's network. No laptop needed!
