

Quick Start:

There are two versions of Swimwear Illustrated Interactive, an 8-bit or 256 color version, and a 32-bit or millions of colors version. The 8-bit version runs faster, but displays the images in 256 colors. The 32-bit version runs slower, but displays the images in millions of colors. You need the following files properly installed into your System folder for the Swimwear Illustrated Interactive CD to work:

QuickTime
Sound
Sound Manager

If you have these files properly installed, double-click on the file SWI 8-bit if you have 256 colors. Double-click on the file SWI 32-bit if your computer is capable of displaying thousands or millions of colors. You must have your monitor set to thousands or millions to view the 32-bit version of Swimwear Illustrated Interactive.
