System Requirements for Swimwear Illustrated Interactive:

Performance will vary depending on your hardware configuration.

Minimum:
A Macintosh with a 68040 25 MHz microprocessor (Quadra 605 or equivalent) , System 7 or later, 8 megabytes RAM, 13" color monitor or larger, double-speed CD-ROM drive.

Recommended:
A Macintosh with a 68040 33 MHz microprocessor (Quadra 630 or equivalent) or Power Macintosh, System 7.1 or later,   13" monitor or larger, 16 megabytes RAM, 16 or 24-bit video, double-speed CD-ROM drive, external speakers.

If you experience fragmented sound or poor performance, temporarily turn off Virtual Memory off from your Memory Control Panel, or disable RAM
 Doubler   if it's in use and restart your computer.

nly if you have more than 16 megabytes of built-in memory:
Copy either the SWI 8-bit or SWI 32-bit application program to your hard drive and

increase the preferred size in the "Get Info" window of the application.   It is recommended you set the preferred size about 800K less than your available memory. To determine the amount of available memory on your system, select "About this Macintosh" from the Apple Menu.
