bout the After Dark PICT files.

If you own After Dark by Berkeley Systems, you may use the files in the "After Dark PICTs" folder with the slide show module that comes with After Dark.   To display the pictures using After Dark, follow these instructions:

1. Create a folder called slideshow within the After Dark Files folder located in your System folder.
2. Open the "After Dark PICTs" folder on this CD.
3. Copy the files from the 8-bit folder if you are in 256 colors, or copy the files from the 32-bit folder if you are set to thousands or millions of colors to the slideshow folder.
4. Open your After Dark control panel, and select the slide show module.

If you have any questions regarding using PICT files with After Dark, please consult your After Dark user's manual or Berkeley Systems.
