

#### Technical Advice:

Swimwear Illustrated has been tested on a variety of Macintosh and Power Macintosh computers. If you experience problems, we suggest you try the following before calling our technical support department:

If you encounter System errors or other problems, remove all files from your System folder that display an icon at startup (during the "Welcome to Macintosh" message) except for your CD-ROM driver, QuickTime, and Sound Manager. You may place the files on your desktop, or in another folder outside the System folder. Also, remove any SCSI Manager extension.

You can also relocate or disable extensions and control panels if you are using a startup manager such as Now Startup Manager, Conflict Catcher, or System 7.5's Extensions Manager. It is recommended that you create a set of extensions just for CD-ROM use. These extensions are your CD-ROM driver, QuickTime, Sound , and Sound Manager.
