

**ordPerfect® for Windows:** The choice just got easier. WordPerfect for Windows combines the incomparable set of features that made WordPerfect famous with a terrific implementation of the Windows graphical user interface (GUI). You can view your fonts and graphics right on the screen while you work.

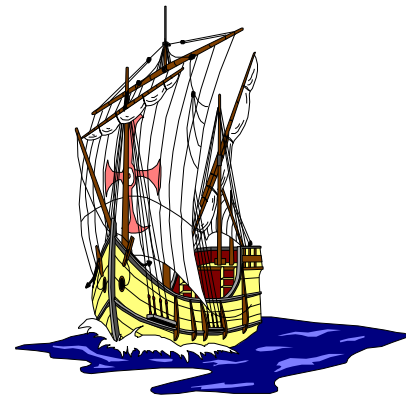

WordPerfect for Windows unlocks the power of desktop publishing in a word

processor. The Ruler speeds up many document format changes such as margins, tabs, and columns. It also provides a handy shortcut for creating tables with a mouse. Graphic images can be easily scaled and moved with the mouse. You can also have as many as nine documents open at once.

The Button Bar lets you assign commonly used features or macros to a button for instant access and select and edit additional Button Bars at the touch of the right mouse button.

There are also several new additions to the WordPerfect for Windows feature line. These new features have been added to give you more flexibility and

program power than ever before. Just a few are listed here:

- Adobe Type Manager (ATM) and fonts.
- Grammatik grammar-checking program.
- QuickFinder, a file indexing and word search program.
- Object Linking and Embedding (OLE), the ability to link information between different Windows programs and your WordPerfect documents.

WordPerfect for Windows can use the same printer drivers that are available in WordPerfect for DOS. Or, if you prefer, you can use the Windows system printer drivers.

WordPerfect for Windows provides a smooth step into the Windows world. Documents created in WordPerfect for Windows and WordPerfect for DOS are completely interchangeable. In short, WordPerfect for Windows is your best choice and the answer for a powerful, reliable, and easy to use Windows word processor.
