

This is a normal path: `karl@cs.umb.edu`. This is a somewhat longer path: `letters@kropotkin.gnu.ai.mit.edu`. This is a still longer path: `megan@agroecology.university-of-california-at-santa-cruz.edu`. I'm making this all one paragraph so the path macro will have a chance to show its stuff. This path has dollar signs and other strange characters (but no vertical bars) in it: `#$%^_<>`. Now I'm going to change the discretionaries to only be at !'s. Now this path should break only at !'s: `-hello!..from!@bang!land`. Now I'm going to change things so backslash is the delimiter. `##hello!there!@.again!...we!**still!_have!-bangs!`. That last was delimited by backslashes, now let's do one that isn't delimited by backslashes: `hi, there!this is fun!`. I'll go on for a little while not doing anything in particular, so T<sub>E</sub>X will have a chance to break the paragraph nicely. That's all, folks!
