

Testing Eplain's verbatim

First let's test if the default — works

verbatim starts

Some special chars:

!@#%&*(*)_+

Now test if doubling works:

This line ends with a single |

Now test if I can use | to get non-verbatim stuff:

\junk

verbatim ends

Now let's try the same with escape set to #.

verbatim starts

Some special chars:

!@\$%^&*()*_+

Now test if doubling works:

This line ends with a single #

Now test if I can use # to get non-verbatim stuff:

Some obviously $a^2 + b^2$ non-verbatim stuff

verbatim ends

Now with @.

verbatim starts

Some special chars:

!#%&^&*()*_+

Now test if doubling works:

This line ends with a single @

Now test if I can use @ to get non-verbatim stuff:

Some obviously $a^2 + b^2$ non-verbatim stuff

verbatim ends
