Overview: Lithuania is striving to become an independent privatized economy. Although it was substantially above average in living standards and technology in the old USSR, Lithuania historically lagged behind Latvia and Estonia in economic development. The country has no important Natural Resources aside from its arable land and strategic location. Industry depends entirely on imported materials that have come from the republics of the former USSR. Lithuania benefits from its ice-free port at Klaipeda on the Baltic Sea and its rail and highway hub at Vilnius, which provides land communication between Eastern Europe and Russia, Latvia, Estonia, and Belarus. Industry produces a small assortment of high-quality products, ranging from complex machine tools to sophisticated consumer electronics. Because of nuclear power, Lithuania is presently self-sufficient in electricity, exporting its surplus to Latvia and Belarus; the nuclear facilities inherited from the USSR, however, have come under world scrutiny as seriously deficient in safety standards. Agriculture is efficient compared with most of the former Soviet Union. Lithuania held first place in per capita consumption of meat, second place for eggs and potatoes, and fourth place for milk and dairy products. Grain must be imported to support the meat and dairy industries. Lithuania is pressing ahead with plans to privatize at least 60% of state-owned property (industry, agriculture, and housing), having already sold almost all housing and many small enterprises using a voucher system. Other government priorities include encouraging foreign investment by protecting the property rights of foreign firms and redirecting foreign trade away from Eastern markets to the more competitive Western markets. For the moment, Lithuania will remain highly dependent on Russia for energy, raw materials, grains, and markets for its products. In 1992, output plummeted by 30% because of cumulative problems with inputs and with markets, problems that were accentuated by the phasing out of the Russian ruble as the medium of exchange.

Overview: The stable economy features moderate growth, low inflation, and negligible unemployment. Agriculture is based on small but highly productive family-owned farms. The industrial sector, until recently dominated by steel, has become increasingly more diversified, particularly toward high-technology firms. During the past decade, growth in the financial sector has more than compensated for the decline in steel. Services, especially banking, account for a growing proportion of the economy. Luxembourg participates in an economic union with Belgium on trade and most financial matters and is also closely connected economically to the Netherlands.

Overview: Macedonia, although the poorest among the six republics of a dissolved Yugoslav federation, can meet basic food and energy needs through its own agricultural and coal resources. It will, however, move down toward a bare subsistence level of life unless economic ties are reforged or enlarged with its neighbors Serbia and Montenegro, Albania, Greece, and Bulgaria. The economy depends on outside sources for all of its oil and gas and its modern machinery and parts. Continued political turmoil, both internally and in the region as a whole, prevents any swift readjustments of trade patterns and economic programs. Inflation in early 1992 was out of control, the result of fracturing trade links, the decline in economic activity, and general uncertainties about the future status of the country; prices rose 38% in March 1992 alone. In August 1992, Greece, angry at the use of "Macedonia" as the republic's name, imposed a partial blockade for several months. This blockade, combined with the effects of the UN sanctions on Serbia and Montenegro, cost the economy approximately $1 billion in 1992 according to official figures. Macedonia's geographical isolation, technological backwardness, and potential political instability place it far down the list of countries of interest to Western investors. Resolution of the dispute with Greece and an internal commitment to economic reform would help to encourage foreign investment over the long run. In the immediate future, the worst scenario for the economy would be the spread of fighting across its borders.

Overview: Madagascar is one of the poorest countries in the world. Agriculture, including fishing and forestry, is the mainstay of the economy, accounting for over 30% of GDP and contributing to more than 70% of total export earnings. Industry is largely confined to the processing of agricultural products and textile manufacturing; in 1991 it accounted for only 13% of GDP. In 1986 the government introduced a five-year development plan that stressed self-sufficiency in food (mainly rice) by 1990, increased production for exports, and reduced energy imports. After mid-1991, however, output dropped sharply because of protracted antigovernment strikes and demonstrations for political reform.

Overview: Landlocked Malawi ranks among the world's least developed countries. The economy is predominately agricultural, with about 90% of the population living in rural areas. Agriculture accounts for 40% of GDP and 90% of export revenues. After two years of weak performance, economic growth improved significantly in 1988-91 as a result of good weather and a broadly based economic adjustment effort by the government. Drought cut overall output sharply in 1992. The economy depends on substantial inflows of economic assistance from the IMF, the World Bank, and individual donor nations.

National product: GDP - exchange rate conversion - $1.9 billion (1992 est.)

National product real growth rate: -7.7% (1992 est.)

National product per capita: $200 (1992 est.)

Inflation rate (consumer prices): 21% (1992 est.)

Unemployment rate: NA%

Overview: The Malaysian economy, a mixture of private enterprise and a soundly managed public sector, has posted a remarkable record of 8%-9% average growth in 1987-92. This growth has resulted in a substantial reduction in poverty and a marked rise in real wages. Despite sluggish growth in the major world economies in 1992, demand for Malaysian goods remained strong and foreign investors continued to commit large sums in the economy. The government is aware of the inflationary potential of this rapid development and is closely monitoring fiscal and monetary policies.

Overview: The economy is based on fishing, tourism, and shipping. Agriculture is limited to the production of a few subsistence crops that provide only 10% of food requirements. Fishing is the largest industry, employing 25% of the work force and accounting for over 60% of exports; it is also an important source of government revenue. During the 1980s tourism became one of the most important and highest growth sectors of the economy. In 1988 industry accounted for about 5% of GDP. Real GDP is officially estimated to have increased by about 10% annually during the period 1974-90.

Overview: Significant resources are limestone, a favorable geographic location, and a productive labor force. Malta produces only about 20% of its food needs, has limited freshwater supplies, and has no domestic energy sources. Consequently, the economy is highly dependent on foreign trade and services. Manufacturing and tourism are the largest contributors to the economy. Manufacturing accounts for about 27% of GDP, with the electronics and textile industries major contributors and the state-owned Malta drydocks employing about 4,300 people. In 1991, about 900,000 tourists visited the island. Per capita GDP at $7,600 places Malta in the middle-income range of the world's nations.

National product: GDP - exchange rate conversion - $2.7 billion (1991 est.)

National product real growth rate: 5.9% (1991)

National product per capita: $7,600 (1991 est.)

Inflation rate (consumer prices): 2.9% (1991)

Unemployment rate: 3.6% (1992)

Overview: Offshore banking, manufacturing, and tourism are key sectors of the economy. The government's policy of offering incentives to high-technology companies and financial institutions to locate on the island has paid off in expanding employment opportunities in high-income industries. As a result, agriculture and fishing, once the mainstays of the economy, have declined in their shares of GNP. Banking now contributes over 20% to GNP and manufacturing about 15%. Trade is mostly with the UK. The Isle of Man enjoys free access to European Community markets.

Overview: Agriculture and tourism are the mainstays of the economy. Agricultural production is concentrated on small farms, and the most important commercial crops are coconuts, tomatoes, melons, and breadfruit. A few cattle ranches supply the domestic meat market. Small-scale industry is limited to handicrafts, fish processing, and copra. The tourist industry is the primary source of foreign exchange and employs about 10% of the labor force. The islands have few Natural Resources, and imports far exceed exports. In 1987 the US Government provided grants of $40 million out of the Marshallese budget of $55 million.

National product: GDP - exchange rate conversion - $63 million (1989 est.)

National product real growth rate: NA%

National product per capita: $1,500 (1989 est.)

Inflation rate (consumer prices): NA%

Overview: The economy is based on sugarcane, bananas, tourism, and light industry. Agriculture accounts for about 10% of GDP and the small industrial sector for 10%. Sugar production has declined, with most of the sugarcane now used for the production of rum. Banana exports are increasing, going mostly to France. The bulk of meat, vegetable, and grain requirements must be imported, contributing to a chronic trade deficit that requires large annual transfers of aid from France. Tourism has become more important than agricultural exports as a source of foreign exchange. The majority of the work force is employed in the service sector and in administration. Banana workers launched protests late in 1992 because of falling banana prices and fears of greater competition in the European market from other producers.

Overview: A majority of the population still depends on agriculture and livestock for a livelihood, even though most of the nomads and many subsistence farmers were forced into the cities by recurrent droughts in the 1970s and 1980s. Mauritania has extensive deposits of iron ore, which account for almost 50% of total exports. The decline in world demand for this ore, however, has led to cutbacks in production. The nation's coastal waters are among the richest fishing areas in the world, but overexploitation by foreigners threatens this key source of revenue. The country's first deepwater port opened near Nouakchott in 1986. In recent years, the droughts, the endemic conflict with Senegal, rising energy costs, and economic mismanagement have resulted in a substantial buildup of foreign debt. The government has begun the second stage of an economic reform program in consultation with the World Bank, the IMF, and major donor countries. But the reform process suffered a major setback following the Gulf war of early 1991. Because of Mauritania's support of SADDAM Husayn, bilateral aid from its two top donors, Saudi Arabia and Kuwait, was suspended, and multilateral aid was reduced.

Overview: Economic activity is based primarily on the agricultural sector, including fishing and livestock raising. Mayotte is not self-sufficient and must import a large portion of its food requirements, mainly from France. The economy and future development of the island are heavily dependent on French financial assistance.

Overview: Mexico's economy is a mixture of state-owned industrial facilities (notably oil), private manufacturing and services, and both large-scale and traditional agriculture. In the 1980s, Mexico experienced severe economic difficulties: the nation accumulated large external debts as world petroleum prices fell; rapid population growth outstripped the domestic food supply; and inflation, unemployment, and pressures to emigrate became more acute. Growth in national output, however, has recovered, rising from 1.4% in 1988 to 4% in 1990 and 3.6% in 1991 and coming in at 2.6% in 1992. The US is Mexico's major trading partner, accounting for almost three-quarters of its exports and imports. After petroleum, border assembly plants and tourism are the largest earners of foreign exchange. The government, in consultation with international economic agencies, has been implementing programs to stabilize the economy and foster growth. For example, it has privatized more than two-thirds of its state-owned companies (parastatals), including banks. In 1991-92 the government conducted negotiations with the US and Canada on a North American Free Trade Agreement (NAFTA), which was still being discussed by the three countries in early 1993. In January 1993, Mexico replaced its old peso with a new peso, at the rate of 1,000 old to 1 new peso. Notwithstanding the palpable improvements in economic performance in the early 1990s, Mexico faces substantial problems for the remainder of the decade - e.g., rapid population growth, unemployment, and serious pollution, particularly in Mexico City.

Overview: Economic activity consists primarily of subsistence farming and fishing. The islands have few mineral deposits worth exploiting, except for high-grade phosphate. The potential for a tourist industry exists, but the remoteness of the location and a lack of adequate facilities hinder development. Financial assistance from the US is the primary source of revenue, with the US pledged to spend $1 billion in the islands in the l990s. Geographical isolation and a poorly developed infrastructure are major impediments to long-term growth.

National product: GNP - purchasing power equivalent - $150 million (1989 est.) Note: GNP numbers reflect US spending

Overview: Moldova, the next-to-smallest of the former Soviet republics in area, is the most densely inhabited. Moldova has a little more than 1% of the population, labor force, capital stock, and output of the former Soviet Union. Living standards have been below average for the European USSR. The country enjoys a favorable climate, and economic development has been primarily based on agriculture, featuring fruits, vegetables, wine, and tobacco. Industry accounts for 20% of the labor force, whereas agriculture employs more than one-third. Moldova has no major mineral resources and has depended on other former Soviet republics for coal, oil, gas, steel, most electronic equipment, machine tools, and major consumer durables such as automobiles. Its industrial and agricultural products, in turn, have been exported to the other republics. Moldova has freed prices on most goods and has legalized private ownership of property. Moldova's near-term economic prospects are dimmed, however, by the difficulties of moving toward a market economy, the political problems of redefining ties to the other former Soviet republics and Romania, and the ongoing separatist movements in the Dniester and Gagauz regions. In 1992, national output fell substantially for the second consecutive year - down 22% in the industrial sector and 20% in agriculture. The decline is mainly attributable to the drop in energy supplies.

Overview: Monaco, situated on the French Mediterranean coast, is a popular resort, attracting tourists to its casino and pleasant climate. The Principality has successfully sought to diversify into services and small, high-value-added, nonpolluting industries. The state has no income tax and low business taxes and thrives as a tax haven both for individuals who have established residence and for foreign companies that have set up businesses and offices. About 50% of Monaco's annual revenue comes from value-added taxes on hotels, banks, and the industrial sector; about 25% of revenue comes from tourism. Living standards are high, that is, roughly comparable to those in prosperous French metropolitan suburbs.

Overview: Mongolia's severe climate, scattered population, and wide expanses of unproductive land have constrained economic development. Economic activity traditionally has been based on agriculture and the breeding of livestock - Mongolia has the highest number of livestock per person in the world. In recent years extensive mineral resources have been developed with Soviet support. The mining and processing of coal, copper, molybdenum, tin, tungsten, and gold account for a large part of industrial production. Timber and fishing are also important sectors. In 1992 the Mongolian leadership continued its struggle with severe economic dislocations, mainly attributable to the crumbling of the USSR, by far Mongolia's leading trade and development partner. Moscow cut almost all aid in 1991, and little was provided in 1992. Industry in 1992 was hit hard by energy shortages, mainly due to disruptions in coal production and shortfalls in petroleum imports. By the end of the year, the country was perilously close to a complete shutdown of its centralized energy supply system, due to critical coal shortages. The government is moving away from the Soviet-style, centrally planned economy through privatization and price reform.

Overview: The economy is small and open with economic activity centered on tourism and construction. Tourism is the most important sector and accounts for roughly one-fifth of GDP. Agriculture accounts for about 4% of GDP and industry 10%. The economy is heavily dependent on imports, making it vulnerable to fluctuations in world prices. Exports consist mainly of electronic parts sold to the US.

Overview: The economy had recovered moderately in 1990 because of: the resolution of a trade dispute with India over phosphoric acid sales, a rebound in textile sales to the EC, lower prices for food imports, a sharp increase in worker remittances, increased Arab donor aid, and generous debt rescheduling agreements. Economic performance in 1991 was mixed. A record harvest helped real GDP advance by 4.2%. Inflation accelerated slightly as easier financial policies triggered rapid credit and monetary growth. Despite recovery of domestic demand, import volume growth slowed while export volume was adversely affected by phosphate marketing difficulties. In January 1992, Morocco reached a new 12-month standby arrangement for $129 million with the IMF. In February 1992, the Paris Club rescheduled $1.4 billion of Morocco's commercial debt. This is thought to be Morocco's last rescheduling. By 1993 the Moroccan authorities hope to be in a position to meet all debt service obligations without additional rescheduling. Servicing this large debt, high unemployment, and Morocco's vulnerability to external economic forces remain severe long-term problems. In 1992 Morocco embarked on a program to privatize 112 state-owned companies. A severe winter drought in 1991/92 cut back agricultural output in 1992.

Overview: One of Africa's poorest countries, Mozambique has failed to exploit the economic potential of its sizable agricultural, hydropower, and transportation resources. Indeed, national output, consumption, and investment declined throughout the first half of the 1980s because of internal disorders, lack of government administrative control, and a growing foreign debt. A sharp increase in foreign aid, attracted by an economic reform policy, resulted in successive years of economic growth in the late 1980s, but aid has declined steadily since 1989. Agricultural output, nevertheless, is at about only 75% of its 1981 level, and grain has to be imported. Industry operates at only 20-40% of capacity. The economy depends heavily on foreign assistance to keep afloat. The continuation of civil strife has dimmed chances of foreign investment, and growth was a mere 0.3% in 1992. Living standards, already abysmally low, fell further in 1991-92.

Overview: The economy is heavily dependent on the mining industry to extract and process minerals for export. Mining accounts for almost 25% of GDP. Namibia is the fourth-largest exporter of nonfuel minerals in Africa and the world's fifth-largest producer of uranium. Alluvial diamond deposits are among the richest in the world, making Namibia a primary source for gem-quality diamonds. Namibia also produces large quantities of lead, zinc, tin, silver, and tungsten. More than half the population depends on agriculture (largely subsistence agriculture) for its livelihood.

Overview: Revenues come from the export of phosphates, the reserves of which are expected to be exhausted by the year 2000. Phosphates have given Nauruans one of the highest per capita incomes in the Third World - $10,000 annually. Few other resources exist, so most necessities must be imported, including fresh water from Australia. The rehabilitation of mined land and the replacement of income from phosphates are serious long-term problems. Substantial amounts of phosphate income are invested in trust funds to help cushion the transition.

National product: GNP - exchange rate conversion - $90 million (1989 est.)

Overview: Nepal is among the poorest and least developed countries in the world. Agriculture is the mainstay of the economy, providing a livelihood for over 90% of the population and accounting for 60% of GDP. Industrial activity is limited, mainly involving the processing of agricultural produce (jute, sugarcane, tobacco, and grain). Production of textiles and carpets has expanded recently and accounted for 85% of foreign exchange earnings in FY91. Apart from agricultural land and forests, exploitable natural resources are mica, hydropower, and tourism. Agricultural production in the late 1980s grew by about 5%, as compared with annual population growth of 2.6%. More than 40% of the population is undernourished partly because of poor distribution. The top 10% of the population receives 47% of total income, the bottom 20% less than 5% of the total. Since May 1991, the government has been encouraging trade and foreign investment, e.g., by eliminating business licenses and registration requirements in order to simplify domestic and foreign investment. The government also has been cutting public expenditures by reducing subsides, privatizing state industries, and laying off civil servants. Prospects for foreign trade and investment in the 1990s remain poor, however, because of the small size of the economy, its technological backwardness, and its remoteness.

National product: GDP - exchange rate conversion - $3.4 billion (FY92)

National product real growth rate: 3.1% (FY92)

National product per capita: $170 (FY92)

Inflation rate (consumer prices): 14% (November 1992)

Unemployment rate: 5% (1987); underemployment estimated at 25-40%

Budget: revenues $308.0 million; expenditures $672.0 million, including capital expenditures of $396 million (FY92 est.)

Exports: $313 million (f.o.b., FY92 est.) but does not include unrecorded border trade with India

Overview: This highly developed and affluent economy is based on private enterprise. The government makes its presence felt, however, through many regulations, permit requirements, and welfare programs affecting most aspects of economic activity. The trade and financial services sector contributes over 50% of GDP. Industrial activity provides about 25% of GDP and is led by the food-processing, oil-refining, and metalworking industries. The highly mechanized agricultural sector employs only 5% of the labor force, but provides large surpluses for export and the domestic food-processing industry. Unemployment and a sizable budget deficit are currently the most serious economic problems. Many of the economic issues of the 1990s will reflect the course of European economic integration.

National product: GDP - purchasing power equivalent - $259.8 billion (1992)

National product real growth rate: 1.6% (1992)

National product per capita: $17,200 (1992)

Overview: Since 1984 the government has been reorienting an agrarian economy dependent on a guaranteed British market to an open free market economy that can compete on the global scene. The government has hoped that dynamic growth would boost real incomes, broaden and deepen the technological capabilities of the industrial sector, reduce inflationary pressures, and permit the expansion of welfare benefits. The results have been mixed: inflation is down from double-digit levels, but growth was sluggish in 1988-91, and unemployment, always a highly sensitive issue, has exceeded 10% since May 1991. In 1992, growth picked up to 3%, a sign that the new economic approach is beginning to pay off.

Overview: Government control of the economy historically has been extensive, although the CHAMORRO government has pledged to greatly reduce intervention. Four private banks have been licensed, and the government has liberalized foreign trade and abolished price controls on most goods. In early 1993, fewer than 50% of the agricultural and industrial firms remain state owned. Sandinista economic policies and the war had produced a severe economic crisis. The foundation of the economy continues to be the export of agricultural commodities, largely coffee and cotton. Farm production fell by roughly 7% in 1989 and 4% in 1990, and remained about even in 1991-92. The agricultural sector employs 44% of the work force and accounts for 15% of GDP and 80% of export earnings. Industry, which employs 13% of the work force and contributes about 25% to GDP, showed a drop of 7% in 1989, fell slightly in 1990, and remained flat in 1991-92; output still is below pre-1979 levels. External debt is one of the highest in the world on a per capita basis. In 1992 the inflation rate was 8%, down sharply from the 766% of 1991.

National product: GDP - exchange rate conversion - $1.7 billion (1992 est.)

Overview: About 90% of the population is engaged in farming and stock raising, activities that generate almost half the national income. The economy also depends heavily on exploitation of large uranium deposits. Uranium production grew rapidly in the mid-1970s, but tapered off in the early 1980s when world prices declined. France is a major customer, while Germany, Japan, and Spain also make regular purchases. The depressed demand for uranium has contributed to an overall sluggishness in the economy, a severe trade imbalance, and a mounting external debt.

Overview: Although Nigeria is Africa's leading oil-producing country, it remains poor with a $300 per capita GDP. In 1991-92 massive government spending, much of it to help ensure a smooth transition to civilian rule, ballooned the budget deficit and caused inflation and interest rates to rise. The lack of fiscal discipline forced the IMF to declare Nigeria not in compliance with an 18-month standby facility started in January 1991. Lagos has set ambitious targets for expanding oil production capacity and is offering foreign companies more attractive investment incentives. Government efforts to reduce Nigeria's dependence on oil exports and to sustain noninflationary growth, however, have fallen short because of inadequate new investment funds and endemic corruption. Living standards remain below the level of the early 1980s oil boom.

National product: GDP - exchange rate conversion - $35 billion (1992 est.)

Overview: The economy is heavily dependent on aid from New Zealand. Government expenditures regularly exceed revenues, with the shortfall made up by grants from New Zealand - the grants are used to pay wages to public employees. The agricultural sector consists mainly of subsistence gardening, although some cash crops are grown for export. Industry consists primarily of small factories to process passion fruit, lime oil, honey, and coconut cream. The sale of postage stamps to foreign collectors is an important source of revenue. The island in recent years has suffered a serious loss of population because of migration of Niueans to New Zealand.

Overview: The primary economic activity is tourism, which has brought a level of prosperity unusual among inhabitants of the Pacific Islands. The number of visitors has increased steadily over the years and reached 29,000 in FY89. Revenues from tourism have given the island a favorable balance of trade and helped the agricultural sector to become self-sufficient in the production of beef, poultry, and eggs.

Overview: The economy benefits substantially from financial assistance from the US. The rate of funding has declined as locally generated government revenues have grown. An agreement for the years 1986 to 1992 entitled the islands to $228 million for capital development, government operations, and special programs. A rapidly growing major source of income is the tourist industry, which now employs about 50% of the work force. Japanese tourists predominate. The agricultural sector is made up of cattle ranches and small farms producing coconuts, breadfruit, tomatoes, and melons. Industry is small scale, mostly handicrafts and light manufacturing.

Overview: Norway has a mixed economy involving a combination of free market activity and government intervention. The government controls key areas, such as the vital petroleum sector (through large-scale state enterprises) and extensively subsidizes agriculture, fishing, and areas with sparse resources. Norway also maintains an extensive welfare system that helps propel public sector expenditures to slightly more than 50% of the GDP and results in one of the highest average tax burdens in the world (54%). A small country with a high dependence on international trade, Norway is basically an exporter of raw materials and semiprocessed goods, with an abundance of small- and medium-sized firms, and is ranked among the major shipping nations. The country is richly endowed with Natural Resources - petroleum, hydropower, fish, forests, and minerals - and is highly dependent on its oil sector to keep its economy afloat. Although one of the government's main priorities is to reduce this dependency, this situation is not likely to improve for years to come. The government also hopes to reduce unemployment and strengthen and diversify the economy through tax reform and a series of expansionary budgets. The budget deficit is expected to hit a record 8% of GDP because of welfare spending and bail-outs of the banking system. Unemployment continues at record levels of over 10% - including those in job programs - because of the weakness of the economy outside the oil sector. Overall economic growth is expected to be around 2% in 1993 while inflation is likely to rise slightly to 4%. Oslo, a member of the European Free Trade Area, has applied for EC membership and continues to deregulate and harmonize with EC regulations to prepare for the European Economic Area (EEA) - which creates an EC/EFTA market with free movement of capital, goods, services, and labor - to take effect in late 1993 and its EC bid.

total area: 165.384 million km2

comparative area:about 18 times the size of the US; the largest ocean (followed by the Atlantic Ocean, the Indian Ocean, and the Arctic Ocean); covers about one-third of the global surface; larger than the total land area of the world

Note: includes Arafura Sea, Banda Sea, Bellingshausen Sea, Bering Sea, Bering Strait, Coral Sea, East China Sea, Gulf of Alaska, Makassar Strait, Philippine Sea, Ross Sea, Sea of Japan, Sea of Okhotsk, South China Sea, Tasman Sea, and other tributary water bodies

Coastline: 135,663 km

International Disputes: some maritime disputes (see littoral states)

Climate: the western Pacific is monsoonal - a rainy season occurs during the summer months, when moisture-laden winds blow from the ocean over the land, and a dry season during the winter months, when dry winds blow from the Asian land mass back to the ocean

Terrain: surface currents in the northern Pacific are dominated by a clockwise, warm-water gyre (broad circular system of currents) and in the southern Pacific by a counterclockwise, cool-water gyre; in the northern Pacific sea ice forms in the Bering Sea and Sea of Okhotsk in winter; in the southern Pacific sea ice from Antarctica reaches its northernmost extent in October; the ocean floor in the eastern Pacific is dominated by the East Pacific Rise, while the western Pacific is dissected by deep trenches, including the world's deepest, the 10,924 meter Marianas Trench

Natural Resources: oil and gas fields, polymetallic nodules, sand and gravel aggregates, placer deposits, fish

Environment: endangered marine species include the dugong, sea lion, sea otter, seals, turtles, and whales; oil pollution in Philippine Sea and South China Sea; dotted with low coral islands and rugged volcanic islands in the southwestern Pacific Ocean; subject to tropical cyclones (typhoons) in southeast and east Asia from May to December (most frequent from July to October); tropical cyclones (hurricanes) may form south of Mexico and strike Central America and Mexico from June to October (most common in August and September); southern shipping lanes subject to icebergs from Antarctica; occasional El Nino phenomenon occurs off the coast of Peru when the trade winds slacken and the warm Equatorial Countercurrent moves south, killing the plankton that is the primary food source for anchovies; consequently, the anchovies move to better feeding grounds, causing resident marine birds to starve by the thousands because of their lost food source

Note: the major choke points are the Bering Strait, Panama Canal, Luzon Strait, and the Singapore Strait; the Equator divides the Pacific Ocean into the North Pacific Ocean and the South Pacific Ocean; ships subject to superstructure icing in extreme north from October to May and in extreme south from May to October; persistent fog in the northern Pacific from June to December is a hazard to shipping; surrounded by a zone of violent volcanic and earthquake activity sometimes referred to as

the Pacific Ring of Fire

Overview: The Pacific Ocean is a major contributor to the world economy and particularly to those nations its waters directly touch. It provides low-cost sea transportation between East and West, extensive fishing grounds, offshore oil and gas fields, minerals, and sand and gravel for the construction industry. In 1985 over half (54%) of the world's total fish catch came from the Pacific Ocean, which is the only ocean where the fish catch has increased every year since 1978. Exploitation of offshore oil and gas reserves is playing an ever-increasing role in the energy supplies of Australia, New Zealand, China, US, and Peru. The high cost of recovering offshore oil and gas, combined with the wide swings in world prices for oil since 1985, has slowed but not stopped new drillings.

Overview: Pakistan is a poor Third World country faced with the usual problems of rapidly increasing population, sizable government deficits, and heavy dependence on foreign aid. In addition, the economy must support a large military establishment. A real economic growth rate averaging 5-6% in recent years has helped the country to cope with these problems. Almost all agriculture and small-scale industry is in private hands. In 1990, Pakistan embarked on a sweeping economic liberalization program to boost foreign and domestic private investment and lower foreign aid dependence. The SHARIF government denationalized several state-owned firms and attracted some foreign investment. Pakistan likely will have difficulty raising living standards because of its rapidly expanding population. At the current rate of growth, population would double in 25 years.

Overview: GDP expanded by roughly 8% in 1992, following growth of 9.3% in 1991. The economy thus continues to recover from the crisis that preceded the ouster of Manuel NORIEGA, even though the government's structural adjustment program has been hampered by a lack of popular support and a passive administration. Public investment has been limited as the administration has kept the fiscal deficit below 3% of GDP. Unemployment and economic reform are the two major issues the government must face in 1993-94.

Overview: Papua New Guinea is richly endowed with Natural Resources, but exploitation has been hampered by the rugged terrain and the high cost of developing an infrastructure. Agriculture provides a subsistence livelihood for 85% of the population. Mining of numerous deposits, including copper and gold, accounts for about 60% of export earnings. Budgetary support from Australia and development aid under World Bank auspices have helped sustain the economy. Robust growth in 1991-92 was led by the mining sector; the opening of a large new gold mine helped the advance.

Overview: Agriculture, including forestry, accounts for about 25% of GDP, employs about 45% of the labor force, and provides the bulk of exports. Paraguay lacks substantial mineral or petroleum resources but does have a large hydropower potential. Since 1981 economic performance has declined compared with the boom period of 1976-81, when real GDP grew at an average annual rate of nearly 11%. During the period 1982-86 real GDP fell in three of five years, inflation jumped to an annual rate of 32%, and foreign debt rose. Factors responsible for the erratic behavior of the economy were the completion of the Itaipu hydroelectric dam, bad weather for crops, and weak international commodity prices for agricultural exports. In 1987 the economy experienced a minor recovery because of improved weather conditions and stronger international prices for key agricultural exports. The recovery continued through 1990, on the strength of bumper crops in 1988-89. In a major step to increase its economic activity in the region, Paraguay in March 1991 joined the Southern Cone Common Market (MERCOSUR), which includes Brazil, Argentina, and Uruguay. In 1992, the government, through an unorthodox approach, reduced external debt with both commercial and official creditors by purchasing a sizable amount of the delinquent commercial debt in the secondary market at a substantial discount. The government had paid 100% of remaining official debt arrears to the US, Germany, France, and Spain. All commercial debt arrears have been rescheduled. For the long run, the government must press forward with general, market-oriented economic reforms.

Overview: The Peruvian economy is becoming increasingly market oriented, with a large dose of government ownership remaining in mining, energy, and banking. In the 1980s the economy suffered from hyperinflation, declining per capita output, and mounting external debt. Peru was shut off from IMF and World Bank support in the mid-1980s because of its huge debt arrears. An austerity program implemented shortly after the FUJIMORI government took office in July 1990 contributed to a third consecutive yearly contraction of economic activity, but the slide halted late that year, and output rose 2.4% in 1991. After a burst of inflation as the austerity program eliminated government price subsidies, monthly price increases eased to the single-digit level and by December 1991 dropped to the lowest increase since mid-1987. Lima obtained a financial rescue package from multilateral lenders in September 1991, although it faced $14 billion in arrears on its external debt. By working with the IMF and World Bank on new financial conditions and arrangements, the government succeeded in ending its arrears by March 1993. In 1992, GDP fell by 2.8%, in part because a warmer-than-usual El Nino current resulted in a 30% drop in the fish catch. Meanwhile, revival of growth in GDP continued to be restricted by the large amount of public and private resources being devoted to strengthening internal security.

Overview: Domestic output in this primarily agricultural economy remained the same in 1992 as in 1991. Drought and power supply problems hampered production, while inadequate revenues prevented government pump priming. Despite a flat GDP performance, GNP mustered a small 0.6% expansion, attributable to inflows of workers' remittances combined with smaller foreign interest payments. A marked increase in capital goods imports, particularly power generations equipment, telecommunications equipment, and electronic data processors, contributed to a 20.5% import growth in 1992. Exports rose 11%, led by earnings from the Philippines' two leading manufactures - electronics and garments.

National product: GDP - exchange rate conversion - $54.1 billion (1992 est.)

National product real growth rate: 0.6% (1992 est.)

Overview: The inhabitants exist on fishing and subsistence farming. The fertile soil of the valleys produces a wide variety of fruits and vegetables, including citrus, sugarcane, watermelons, bananas, yams, and beans. Bartering is an important part of the economy. The major sources of revenue are the sale of postage stamps to collectors and the sale of handicrafts to passing ships.

Overview: Poland is undergoing a difficult transition from a Soviet-style economy - with state ownership and control of productive assets - to a market economy. On January 1, 1990, the new Solidarity-led government implemented shock therapy by slashing subsidies, decontrolling prices, tightening the money supply, stabilizing the foreign exchange rate, lowering import barriers, and restraining state sector wages. As a result, consumer goods shortages and lines disappeared, and inflation fell from 640% in 1989 to 44% in 1992. Western governments, which hold two-thirds of Poland's $48 billion external debt, pledged in 1991 to forgive half of Poland's official debt by 1994. The private sector accounted for 29% of industrial production and nearly half of nonagricultural output in 1992. Production fell in state enterprises, however, and the unemployment rate climbed steadily from virtually nothing in 1989 to 13.6% in December 1992. Poland fell out of compliance with its IMF program by mid-1991, and talks with commercial creditors stalled. The increase in unemployment and the decline in living standards led to strikes in the coal, auto, copper, and railway sectors in 1992. Large state enterprises in the coal, steel, and defense sectors plan to halve employment over the next decade, and the government expects unemployment to reach 3 million (16%) in 1993. A shortfall in tax revenues caused the budget deficit to reach 6% of GDP in 1992, but industrial production began a slow, uneven upturn. In 1993, the government will struggle to win legislative approval for faster privatization and to keep the budget deficit within IMF-approved limits.

Overview: Although Portugal has experienced strong growth since joining the EC in 1986 - at least 4% each year through 1990 - it remains one of the poorest members. To prepare for the European single market, the government is restructuring and modernizing the economy and in 1989 embarked on a major privatization program. As of 1 January 1993, Lisbon has fully liberalized its capital markets and most trade markets. The global slowdown and tight monetary policies to counter inflation caused growth to slow in 1991 and 1992. Growth probably will remain depressed in 1993, but should pick up again in 1994.

Overview: Puerto Rico has one of the most dynamic economies in the Caribbean region. Industry has surpassed agriculture as the primary sector of economic activity and income. Encouraged by duty free access to the US and by tax incentives, US firms have invested heavily in Puerto Rico since the 1950s. US minimum wage laws apply. Important industries include pharmaceuticals, electronics, textiles, petrochemicals, and processed foods. Sugar production has lost out to dairy production and other livestock products as the main source of income in the agricultural sector. Tourism has traditionally been an important source of income for the island, with estimated arrivals of nearly 3 million tourists in 1989.

National product: GNP - purchasing power equivalent - $22.8 billion (1991)

Overview: Oil is the backbone of the economy and accounts for more than 85% of export earnings and roughly 75% of government revenues. Proved oil reserves of 3.3 billion barrels should ensure continued output at current levels for about 25 years. Oil has given Qatar a per capita GDP of about $17,000, comparable to the leading industrial countries. Production and export of natural gas is becoming increasingly important.

National product: GDP - exchange rate conversion - $8.1 billion (1991 est.)

National product real growth rate: 3% (1991 est.)

National product per capita: $17,000 (1991 est.)

Overview: The economy has traditionally been based on agriculture. Sugarcane has been the primary crop for more than a century, and in some years it accounts for 85% of exports. The government has been pushing the development of a tourist industry to relieve high unemployment, which recently amounted to one-third of the labor force. The gap in Reunion between the well-off and the poor is extraordinary and accounts for the persistent social tensions. The white and Indian communities are substantially better off than other segments of the population, often approaching European standards, whereas indigenous groups suffer the poverty and unemployment typical of the poorer nations of the African continent. The outbreak of severe rioting in February 1991 illustrates the seriousness of socioeconomic tensions. The economic well-being of Reunion depends heavily on continued financial assistance from France.

Overview: Industry, which accounts for about one-third of the labor force and generates over half the GDP, suffers from an aging capital plant and persistent shortages of energy. The year 1991 witnessed a 17% drop in industrial production because of energy and input shortages and labor unrest. In recent years the agricultural sector has had to contend with flooding, mismanagement, shortages of inputs, and disarray caused by the dismantling of cooperatives. A shortage of inputs and a severe drought in 1991 contributed to a poor harvest, a problem compounded by corruption and an obsolete distribution system. The new government has instituted moderate land reforms, with more than one-half of cropland now in private hands, and it has liberalized private agricultural output. Private enterprises form an increasingly important portion of the economy largely in services, handicrafts, and small-scale industry. Little progress on large scale privatization has been made since a law providing for the privatization of large state firms was passed in August 1991. Most of the large state firms have been converted into joint-stock companies, but the selling of shares and assets to private owners has been delayed. While the government has halted the old policy of diverting food from domestic consumption to hard currency export markets, supplies remain scarce in some areas. The new government continues to impose price ceilings on key consumer items. In 1992 the economy muddled along toward the new, more open system, yet output and living standards continued to fall.

Overview: Russia, a vast country with a wealth of Natural Resources and a diverse industrial base, continues to experience great difficulties in moving from its old centrally planned economy to a modern market economy. President YEL'TSIN's government made significant strides toward a market economy in 1992 by freeing most prices, slashing defense spending, unifying foreign exchange rates, and launching an ambitious privatization program. At the same time, GDP fell 19%, according to official statistics, largely reflecting government efforts to restructure the economy, shortages of essential imports caused by the breakdown in former Bloc and interstate trade, and reduced demand following the freeing of prices in January. The actual decline, however, may have been less steep, because industrial and agricultural enterprises had strong incentives to understate output to avoid taxes, and official statistics may not have fully captured the output of the growing private sector. Despite the large drop in output, unemployment at yearend stood at an estimated 3%-4% of Russia's 74-million-person labor force; many people, however, are working shortened weeks or are on forced leave. Moscow's financial stabilization program got off to a good start at the beginning of 1992 but began to falter by midyear. Under pressure from industrialists and the Supreme Soviet, the government loosened fiscal policies in the second half. In addition, the Russian Central Bank relaxed its tight credit policy in July at the behest of new Acting Chairman, Viktor GERASHCHENKO. This loosening of financial policies led to a sharp increase in prices during the last quarter, and inflation reached about 25% per month by yearend. The situation of most consumers worsened in 1992. The January price liberalization and a blossoming of private vendors filled shelves across the country with previously scarce food items and consumer goods, but wages lagged behind inflation, making such goods unaffordable for many consumers. Falling real wages forced most Russians to spend a larger share of their income on food and to alter their eating habits. Indeed, many Russians reduced their consumption of higher priced meat, fish, milk, vegetables, and fruit, in favor of more bread and potatoes. As a result of higher spending on food, consumers reduced their consumption of nonfood goods and services. Despite a slow start and some rough going, the Russian government by the end of 1992 scored some successes in its campaign to break the state's stranglehold on property and improve the environment for private businesses. More peasant farms were created than expected; the number of consumers purchasing goods from private traders rose sharply; the portion of the population working in the private sector increased to nearly one-fifth; and the nine-month-long slump in the privatization of small businesses was ended in the fall. Although the output of weapons fell sharply in 1992, most defense enterprises continued to encounter numerous difficulties developing and marketing consumer products, establishing new supply links, and securing resources for retooling. Indeed, total civil production by the defense sector fell in 1992 because of shortages of inputs and lower consumer demand caused by higher prices. Ruptured ties with former trading partners, output declines, and sometimes erratic efforts to move to world prices and decentralize trade - foreign and interstate - took a heavy toll on Russia's commercial relations with other countries. For the second year in a row, foreign trade was down sharply, with exports falling by as much as 25% and imports by 21%. The drop in imports would have been much greater if foreign aid - worth an estimated $8 billion - had not

allowed the continued inflow of essential products. Trade with the other former Soviet republics continued to decline, and support for the ruble as a common currency eroded in the face of Moscow's loose monetary policies and rapidly rising prices throughout the region. At the same time, Russia paid only a fraction of the $20 billion due on the former USSR's roughly $80 billion debt; debt rescheduling remained hung up because of a dispute between Russia and Ukraine over division of the former USSR's assets. Capital flight also remained a serious problem in 1992. Russia's economic difficulties did not abate in the first quarter of 1993. Monthly inflation remained at double-digit levels and industrial production continued to slump. To reduce the threat of hyperinflation, the government proposed to restrict subsidies to enterprises; raise interest rates; set quarterly limits on credits, the budget deficit, and money supply growth; and impose temporary taxes and cut spending if budget targets are not met. But many legislators and Central Bank officials oppose various of these austerity measures and failed to approve them in the first part of 1993.

Overview: Almost 50% of GDP comes from the agricultural sector; coffee and tea make up 80-90% of total exports. The amount of fertile land is limited, however, and deforestation and soil erosion have created problems. The industrial sector in Rwanda is small, contributing only 17% to GDP. Manufacturing focuses mainly on the processing of agricultural products. The Rwandan economy remains dependent on coffee exports and foreign aid. Weak international prices since 1986 have caused the economy to contract and per capita GDP to decline. A structural adjustment program with the World Bank began in October 1990. An outbreak of insurgency, also in October 1990, has dampened prospects for economic improvement.

National product: GDP - exchange rate conversion - $2.35 billion (1992 est.)

National product real growth rate: 1.3% (1992 est.)

National product per capita: $290 (1992 est.)

Inflation rate (consumer prices): 6% (1992 est.)

Electricity: 30,000 kW capacity; 130 million kWh produced, 15 kWh per capita (1991)
Industries: mining of cassiterite (tin ore) and wolframite (tungsten ore), tin, cement, agricultural processing, small-scale beverage production, soap, furniture, shoes, plastic goods, textiles, cigarettes
Agriculture: accounts for almost 50% of GDP and about 90% of the labor force; cash crops - coffee, tea, pyrethrum (insecticide made from chrysanthemums); main food crops - bananas, beans, sorghum, potatoes; stock raising; self-sufficiency declining; country imports foodstuffs as farm production fails to keep up with a 3.8% annual growth in population
Economic aid: US commitments, including Ex-Im (FY70-89), $128 million; Western (non-US) countries, ODA and OOF bilateral commitments (1970-89), $2.0 billion; OPEC bilateral aid (1979-89), $45 million; Communist countries (1970-89), $58 million; Note - in October 1990 Rwanda launched a Structural Adjustment Program with the IMF; since September 1991, the EC has given $46 million and the US $25 million in support of this program
Currency: 1 Rwandan franc (RF) = 100 centimes
Exchange rates: Rwandan francs (RF) per US$1 - 146.34 (January 1993), 133.35 (1992), 125.14 (1991), 82.60 (1990), 79.98 (1989), 76.45 (1988)

Overview: Since 1983 the economy has shown an impressive average annual growth rate of almost 5% because of strong agricultural and tourist sectors. Saint Lucia also possesses an expanding industrial base supported by foreign investment in manufacturing and other activities, such as in data processing. The economy, however, remains vulnerable because the important agricultural sector is dominated by banana production, which is subject to periodic droughts and/or tropical storms.

Overview: The inhabitants have traditionally earned their livelihood by fishing and by servicing fishing fleets operating off the coast of Newfoundland. The economy has been declining, however, because the number of ships stopping at Saint Pierre has dropped steadily over the years. In March 1989, an agreement between France and Canada set fish quotas for Saint Pierre's trawlers fishing in Canadian and Canadian-claimed waters for three years. The agreement settles a longstanding dispute that had virtually brought fish exports to a halt. The islands are heavily subsidized by France. Imports come primarily from Canada and France.

Overview: Agriculture, dominated by banana production, is the most important sector of the economy. The services sector, based mostly on a growing tourist industry, is also important. The economy continues to have a high unemployment rate of 35%-40% because of an overdependence on the weather-plagued banana crop as a major export earner. Government progress toward diversifying into new industries has been relatively unsuccessful.

National product: GDP - exchange rate conversion - $171 million (1992 est.)

National product real growth rate: 3% (1992 est.)

National product per capita: $1,500 (1992 est.)

Inflation rate (consumer prices): 2.3% (1991 est.)

Unemployment rate: 35%-40% (1992 est.)

Budget: revenues $62 million; expenditures $67 million, including capital expenditures of $21 million (FY90 est.)

Overview: The economy has remained dependent on cocoa since the country gained independence nearly 15 years ago. Since then, however, cocoa production has gradually deteriorated because of drought and mismanagement, so that by 1987 output had fallen to less than 50% of its former levels. As a result, a shortage of cocoa for export has created a serious balance-of-payments problem. Production of less important crops, such as coffee, copra, and palm kernels, has also declined. The value of imports generally exceeds that of exports by a ratio of 4:1. The emphasis on cocoa production at the expense of other food crops has meant that Sao Tome has to import 90% of food needs. It also has to import all fuels and most manufactured goods. Over the years, Sao Tome has been unable to service its external debt, which amounts to roughly 80% of export earnings. Considerable potential exists for development of a tourist industry, and the government has taken steps to expand facilities in recent years. The government also implemented a Five-Year Plan covering 1986-90 to restructure the economy and reschedule external debt service payments in cooperation with the International Development Association and Western lenders.

Overview: The petroleum sector accounts for roughly 75% of budget revenues, 35% of GDP, and almost all export earnings. Saudi Arabia has the largest reserves of petroleum in the world, ranks as the largest exporter of petroleum, and plays a leading role in OPEC. For the 1990s the government intends to encourage private economic activity and to foster the gradual process of turning Saudi Arabia into a modern industrial state that retains traditional Islamic values. Four million foreign workers play an important role in the Saudi economy, for example, in the oil and banking sectors.

Overview: The agricultural sector accounts for about 12% of GDP and provides employment for about 80% of the labor force. About 40% of the total cultivated land is used to grow peanuts, an important export crop. Another principal economic resource is fishing, which brought in about 23% of total foreign exchange earnings in 1990. Mining is dominated by the extraction of phosphate, but production has faltered because of reduced worldwide demand for fertilizers in recent years. Over the past 10 years tourism has become increasingly important to the economy.

Overview: The swift collapse of the Yugoslav federation has been followed by bloody ethnic warfare, the destabilization of republic boundaries, and the breakup of important interrepublic trade flows. The situation in Serbia and Montenegro remains fluid in view of the extensive political and military strife. Serbia and Montenegro faces major economic problems. First, like the other former Yugoslav republics, it depended on its sister republics for large amounts of foodstuffs, energy supplies, and manufactures. Wide varieties in climate, mineral resources, and levels of technology among the republics accentuate this interdependence, as did the Communist practice of concentrating much industrial output in a small number of giant plants. The breakup of many of the trade links, the sharp drop in output as industrial plants lost suppliers and markets, and the destruction of physical assets in the fighting all have contributed to the economic difficulties of the republics. One singular factor in the economic situation of Serbia and Montenegro is the continuation in office of a Communist government that is primarily interested in political and military mastery, not economic reform. A further complication is the imposition of economic sanctions by the UN.

Overview: In this small, open, tropical island economy, the tourist industry employs about 30% of the labor force and provides more than 70% of hard currency earnings. In recent years the government has encouraged foreign investment in order to upgrade hotels and other services. At the same time, the government has moved to reduce the high dependence on tourism by promoting the development of farming, fishing, and small-scale manufacturing.

Overview: The economic and social infrastructure is not well developed. Subsistence agriculture dominates the economy, generating about one-third of GDP and employing about two-thirds of the working population. Manufacturing, which accounts for roughly 10% of GDP, consists mainly of the processing of raw materials and of light manufacturing for the domestic market. Diamond mining provides an important source of hard currency. The economy suffers from high unemployment, rising inflation, large trade deficits, and a growing dependency on foreign assistance. The government in 1990 was attempting to get the budget deficit under control and, in general, to bring economic policy in line with the recommendations of the IMF and the World Bank. Since March 1991, however, military incursions by Liberian rebels in southern and eastern Sierra Leone have severely strained the economy and have undermined efforts to institute economic reforms.

Overview: Singapore has an open entrepreneurial economy with strong service and manufacturing sectors and excellent international trading links derived from its entrepot history. The economy appears to have pulled off a soft landing from the 9% growth rate of the late 1980s, registering higher than expected growth in 1992 while stemming inflation. Economic activity slowed early in 1992, primarily as a result of slackened demand in Singapore's export markets. But after bottoming out in the second quarter, the economy picked up in line with a gradual recovery in the United States. The year's best performers were the construction and financial services industries and manufacturers of computer-related components. Rising labor costs continue to be a threat to Singapore's competitiveness, but there are indications that productivity is catching up. Government surpluses and the rate of gross national savings remain high. In technology, per capita output, and labor discipline, Singapore is well on its way toward its goal of becoming a developed country.

Overview: The dissolution of Czechoslovakia into two independent states - the Czech Republic and Slovakia - on 1 January 1993 has complicated the task of moving toward a more open and decentralized economy. The old Czechoslovakia, even though highly industrialized by East European standards, suffered from an aging capital plant, lagging technology, and a deficiency in energy and many raw materials. In January 1991, approximately one year after the end of communist control of Eastern Europe, the Czech and Slovak Federal Republic launched a sweeping program to convert its almost entirely state-owned and controlled economy to a market system. In 1991-92 these measures resulted in privatization of some medium- and small-scale economic activity and the setting of more than 90% of prices by the market - but at a cost in inflation, unemployment, and lower output. For Czechoslovakia as a whole inflation in 1991 was roughly 50% and output fell 15%. In 1992 in Slovakia, inflation slowed to an estimated 8.7% and the estimated fall in GDP was a more moderate 7%. In 1993 the government anticipates up to a 7% drop in GDP, with the disruptions from the separation from the Czech lands probably accounting for half the decline; inflation, according to government projections, may rise to 15-20% and unemployment may reach 12-15%. The Slovak government is moving ahead less enthusiastically than the Czech government in the further dismantling of the old centrally controlled economic system. Although the governments of Slovakia and the Czech Republic had envisaged retaining the koruna as a common currency at least in the short run, the two countries ended the currency union in February 1993.

Overview: Slovenia was by far the most prosperous of the former Yugoslav republics, with a per capita income more than twice the Yugoslav average, indeed not far below the levels in neighboring Austria and Italy. Because of its strong ties to Western Europe and the small scale of damage during its fight for independence from Yugoslavia, Slovenia has the brightest prospects among the former Yugoslav republics for economic recovery over the next few years. The dissolution of Yugoslavia, however, has led to severe short-term dislocations in production, employment, and trade ties. For example, overall industrial production fell 10% in 1991; particularly hard hit were the iron and steel, machine-building, chemical, and textile industries. Meanwhile, the continued fighting in other former Yugoslavian republics has led to further destruction of long-established trade channels and to an influx of tens of thousands of Croatian and Bosnian refugees. The key program for breaking up and privatizing major industrial firms was established in late 1992. Bright spots for encouraging Western investors are Slovenia's comparatively well-educated work force, its developed infrastructure, and its Western business attitudes, but instability in Croatia is a deterrent. Slovenia in absolute terms is a small economy, and a little Western investment would go a long way.

Overview: About 90% of the population depend on subsistence agriculture, fishing, and forestry for at least part of their livelihood. Agriculture, fishing, and forestry contribute about 70% to GDP, with the fishing and forestry sectors being important export earners. The service sector contributes about 25% to GDP. Most manufactured goods and petroleum products must be imported. The islands are rich in undeveloped mineral resources such as lead, zinc, nickel, and gold. The economy suffered from a severe cyclone in mid-1986 that caused widespread damage to the infrastructure.

Overview: One of the world's poorest and least developed countries, Somalia has few resources. Moreover, much of the economy has been devastated by the civil war. Agriculture is the most important sector, with livestock accounting for about 40% of GDP and about 65% of export earnings. Nomads and seminomads who are dependent upon livestock for their livelihoods make up more than half of the population. Crop production generates only 10% of GDP and employs about 20% of the work force. The main export crop is bananas; sugar, sorghum, and corn are grown for the domestic market. The small industrial sector is based on the processing of agricultural products and accounts for less than 10% of GDP. Greatly increased political turmoil in 1991-92 has resulted in a substantial drop in output, with widespread famine.

Location: Southern Africa, at the extreme southern tip of the continent

Area:

total area:	1,221,040 km2
land area:	1,221,040 km2

comparative area: slightly less than twice the size of Texas

Note: includes Walvis Bay, Marion Island, and Prince Edward Island

Land Boundaries:

total:	4,973 km
Botswana:	1,840 km
Lesotho:	909 km
Mozambique:	491 km
Namibia:	1,078 km
Swaziland:	430 km
Zimbabwe:	225 km

Coastline: 2,881 km

Maritime Claims:

continental shelf:	200 m depth or to depth of exploitation
exclusive fishing zone:	200 nm
territorial sea:	12 nm

International Disputes: claim by Namibia to Walvis Bay exclave and 12 offshore islands administered by South Africa; South Africa and Namibia have agreed to jointly administer the area for an interim period; the terms and dates to be covered by joint administration arrangements have not been established at this time; and Namibia will continue to maintain a claim to sovereignty over the entire area

Climate: mostly semiarid; subtropical along coast; sunny days, cool nights

Terrain: vast interior plateau rimmed by rugged hills and narrow coastal plain

Natural Resources: gold, chromium, antimony, coal, iron ore, manganese, nickel, phosphates, tin, uranium, gem diamonds, platinum, copper, vanadium, salt, natural gas

Land Use:

arable land:	10%
permanent crops:	1%
meadows and pastures:	65%
forest and woodland:	3%
other:	21%

Irrigated Land: 11,280 km2 (1989 est.)

Environment: lack of important arterial rivers or lakes requires extensive water conservation and

control measures

Note: Walvis Bay is an exclave of South Africa in Namibia; South Africa completely surrounds Lesotho and almost completely surrounds Swaziland

Overview: Many of the white one-seventh of the South African population enjoy incomes, material comforts, and health and educational standards equal to those of Western Europe. In contrast, most of the remaining population suffers from the poverty patterns of the Third World, including unemployment and lack of job skills. The main strength of the economy lies in its rich mineral resources, which provide two-thirds of exports. Economic developments in the 1990s will be driven partly by the changing relations among the various ethnic groups. The shrinking economy in recent years has absorbed less than 10% of the more than 300,000 workers entering the labor force annually. Local economists estimate that the economy must grow between 5% and 6% in real terms annually to absorb all of the new entrants.

Affiliation: dependent territory of the UK

Location: in the South Atlantic Ocean, off the south Argentine coast, southeast of the Falkland Islands

Area:

total area:	4,066 km2
land area:	4,066 km2
comparative area:	slightly larger than Rhode Island

Note: includes Shag Rocks, Clerke Rocks, Bird Island

Land Boundaries: 0 km

Coastline: NA km

Maritime Claims:

territorial sea:	12 nm

International Disputes: administered by the UK, claimed by Argentina

Climate: variable, with mostly westerly winds throughout the year, interspersed with periods of calm; nearly all precipitation falls as snow

Terrain: most of the islands, rising steeply from the sea, are rugged and mountainous; South Georgia is largely barren and has steep, glacier-covered mountains; the South Sandwich Islands are of volcanic origin with some active volcanoes

Natural Resources: fish

Land Use:

arable land:	0%
permanent crops:	0%
meadows and pastures:	0%
forest and woodland:	0%

other: 100% (largely covered by permanent ice and snow with some sparse vegetation consisting of grass, moss, and lichen)

Irrigated Land: 0 km2

Environment: reindeer, introduced early in this century, live on South Georgia; weather conditions generally make it difficult to approach the South Sandwich Islands; the South Sandwich Islands are subject to active volcanism

Note: the north coast of South Georgia has several large bays, which provide good anchorage

Overview: Spain has done well since joining the EC in 1986. Foreign and domestic investments have spurred GDP growth at an annual average of more than 4% in 1986-91. As of 1 January 1993, Spain has wholly liberalized its trade and capital markets to EC standards, including integrating agriculture two years ahead of schedule. Beginning in 1989, Madrid implemented a tight monetary policy to fight 7% inflation. As a result of this action and the worldwide decline in economic growth, Spain's growth rate declined to 1% in 1992. Spain faces a likely recession in first half 1993. The government expects a recovery in the second half, but this depends on stepped-up growth in Germany and France. The slowdown in growth - along with displacements caused by structural adjustments in preparation for the EC single market - has pushed an already high unemployment rate up to 19%. However, many people listed as unemployed work in the underground economy. If the government can stick to its tough economic policies and push further structural reforms, the economy will emerge stronger at the end of the 1990s.

Overview: Agriculture, forestry, and fishing dominate the economy, employing half of the labor force and accounting for one quarter of GDP. The plantation crops of tea, rubber, and coconuts provide about one-third of export earnings. The economy has been plagued by high rates of unemployment since the late 1970s. Economic growth, which has been depressed by ethnic unrest, accelerated in 1991-92 as domestic conditions began to improve and conditions for foreign investment brightened.

National product: GDP - exchange rate conversion - $7.75 billion (1992 est.)

Overview: Sudan is buffeted by civil war, chronic political instability, adverse weather, high inflation, a drop in remittances from abroad, and counterproductive economic policies. The economy is dominated by governmental entities that account for more than 70% of new investment. The private sector's main areas of activity are agriculture and trading, with most private industrial investment predating 1980. The economy's base is agriculture, which employs 80% of the work force. Industry mainly processes agricultural items. Sluggish economic performance over the past decade, attributable largely to declining annual rainfall, has reduced levels of per capita income and consumption. A large foreign debt and huge arrearages continue to cause difficulties. In 1990 the International Monetary Fund took the unusual step of declaring Sudan noncooperative because of its nonpayment of arrearages to the Fund. Despite subsequent government efforts to implement reforms urged by the IMF and the World Bank, the economy remained stagnant in FY91 as entrepreneurs lack the incentive to take economic risks. Growth in 1992 was featured by the recovery of agricultural production in northern Sudan after two years of drought.

Overview: The economy is dominated by the bauxite industry, which accounts for 15% of GDP and about 70% of export earnings. The economy has been in trouble since the Dutch ended development aid in 1982. A drop in world bauxite prices which started in the late 1970s and continued until late 1986 was followed by the outbreak of a guerrilla insurgency in the interior that crippled the important bauxite sector. Although the insurgency has since ebbed and the bauxite sector recovered, a military coup in December 1990 reflected continued political instability and deterred investment and economic reform. High inflation, high unemployment, widespread black market activity, and hard currency shortfalls continue to mark the economy.

Affiliation: territory of Norway

Location: in the Arctic Ocean where the Arctic Ocean, Barents Sea, Greenland Sea, and Norwegian Sea meet, 445 km north of Norway

Area:

total area:	62,049 km2
land area:	62,049 km2
comparative area:	slightly smaller than West Virginia

Note: includes Spitsbergen and Bjornoya (Bear Island)

Land Boundaries: 0 km

Coastline: 3,587 km

Maritime Claims:

exclusive fishing zone:	200 nm unilaterally claimed by Norway but not recognized by Russia
territorial sea:	4 nm

International Disputes: focus of maritime boundary dispute in the Barents Sea between Norway and Russia

Climate: arctic, tempered by warm North Atlantic Current; cool summers, cold winters; North Atlantic Current flows along west and north coasts of Spitsbergen, keeping water open and navigable most of the year

Terrain: wild, rugged mountains; much of high land ice covered; west coast clear of ice about half the year; fjords along west and north coasts

Natural Resources: coal, copper, iron ore, phosphate, zinc, wildlife, fish

Land Use:

arable land:	0%
permanent crops:	0%
meadows and pastures:	0%
forest and woodland:	0%
other:	100% (no trees and the only bushes are crowberry and cloudberry)

Irrigated Land: NA km2

Environment: great calving glaciers descend to the sea

Note: northernmost part of the Kingdom of Norway; consists of nine main islands; glaciers and snowfields cover 60% of the total area

Overview: Coal mining is the major economic activity on Svalbard. By treaty (9 February 1920), the nationals of the treaty powers have equal rights to exploit mineral deposits, subject to Norwegian regulation. Although US, UK, Dutch, and Swedish coal companies have mined in the past, the only companies still mining are Norwegian and Russian. The settlements on Svalbard are essentially company towns. The Norwegian state-owned coal company employs nearly 60% of the Norwegian population on the island, runs many of the local services, and provides most of the local infrastructure. There is also some trapping of seal, polar bear, fox, and walrus.

Budget: revenues $13.3 million; expenditures $13.3 million, including capital expenditures of $NA (1990)

Electricity: 21,000 kW capacity; 45 million kWh produced, 13,860 kWh per capita (1992)

Currency: 1 Norwegian krone (NKr) = 100 ore

Exchange rates: Norwegian kroner (NKr) per US$1 - 6.8774 (January 1993), 6.2145 (1992), 6.4829 (1991), 6.2597 (1990), 6.9045 (1989), 6.5170 (1988)

Overview: The economy is based on subsistence agriculture, which occupies most of the labor force and contributes nearly 25% to GDP. Manufacturing, which includes a number of agroprocessing factories, accounts for another quarter of GDP. Mining has declined in importance in recent years; high-grade iron ore deposits were depleted in 1978, and health concerns cut world demand for asbestos. Exports of sugar and forestry products are the main earners of hard currency. Surrounded by South Africa, except for a short border with Mozambique, Swaziland is heavily dependent on South Africa, from which it receives 75% of its imports and to which it sends about half of its exports.

National product: GDP - exchange rate conversion - $700 million (1991 est.)

Overview: Aided by a long period of peace and neutrality during World War I through World War II, Sweden has achieved an enviable standard of living under a mixed system of high-tech capitalism and extensive welfare benefits. It has a modern distribution system, excellent internal and external communications, and a skilled labor force. Timber, hydropower, and iron ore constitute the resource base of an economy that is heavily oriented toward foreign trade. Privately owned firms account for about 90% of industrial output, of which the engineering sector accounts for 50% of output and exports. In the last few years, however, this extraordinarily favorable picture has been clouded by inflation, growing unemployment, and a gradual loss of competitiveness in international markets. Although Prime Minister BILDT'S center-right minority coalition had hoped to charge ahead with free-market-oriented reforms, a skyrocketing budget deficit - almost 13% of GDP in FY94 projections - and record unemployment have forestalled many of the plans. Unemployment in 1993 is forecast at around 7% with another 5% in job training. Continued heavy foreign exchange speculation forced the government to cooperate in late 1992 with the opposition Social Democrats on two crisis packages - one a severe austerity pact and the other a program to spur industrial competitiveness - which basically set economic policy through 1997. In November 1992, Sweden broke its tie to the EC's ECU, and the krona has since depreciated around 2.5% against the dollar. The government hopes the boost in export competitiveness from the depreciation will help lift Sweden out of its 3-year recession. To curb the budget deficit and bolster confidence in the economy, BILDT continues to propose cuts in welfare benefits, subsidies, defense, and foreign aid. Sweden continues to harmonize its economic policies with those of the EC in preparation for concluding its EC membership bid by 1995.

Overview: Switzerland's economy - one of the most prosperous and stable in the world - is nonetheless undergoing a painful adjustment after both the inflationary boom of the late-1980s and the electorate's rejection late last year of membership in the European Economic Area. Stubborn inflation and a soft economy have afflicted Switzerland. Despite slow growth in 1991-92, the Swiss central bank had been unable to ease monetary policy in the past three years because of the threat to the Swiss franc posed by high German interest rates. As a result, unemployment is forecast to rise from 3% in 1992 to more than 4% in 1993, with inflation moving down from 4% to 3%. The voters' rejection in December 1992 of a referendum on membership in the EEA which was supported by most political, business, and financial leaders has raised doubts that the country can maintain its preeminent prosperity and leadership in commercial banking in the 21st century. Despite these problems, Swiss per capita output, general living standards, education and science, health care, and diet remain unsurpassed in Europe. The country has few Natural Resources except for the scenic natural beauty that has made it a world leader in tourism. Management-labor relations remain generally harmonious.

Overview: Syria's state-dominated Ba'thist economy has benefited from the Gulf war, increased oil production, good weather, and economic deregulation. Economic growth averaged nearly 12% annually in 1990-91, buoyed by increased oil production and improved agricultural performance. The Gulf war of early 1991 provided Syria an aid windfall of nearly $5 billion dollars from Arab, European, and Japanese donors. These inflows more than offset Damascus's war-related costs and will help Syria cover some of its debt arrears, restore suspended credit lines, and initiate selected military and civilian purchases. In 1992 the government spurred economic development by loosening controls on domestic and foreign investment while maintaining strict political controls. For the long run, Syria's economy is still saddled with a large number of poorly performing public sector firms and industrial and agricultural productivity is poor. A major long-term concern is the additional drain of upstream Euphrates water by Turkey when its vast dam and irrigation projects are completed by mid-decade.

Overview: Tajikistan has had the lowest living standards of the CIS republics and now faces the bleakest economic prospects. Agriculture (particularly cotton and fruit growing) is the most important sector, accounting for 38% of employment (1990). Industrial production includes aluminum reduction, hydropower generation, machine tools, refrigerators, and freezers. Throughout 1992 bloody civil disturbances disrupted food imports and several regions became desperately short of basic needs. Hundreds of thousands of people were made homeless by the strife. In late 1992, one-third of industry was shut down and the cotton crop was only one-half of that of 1991.

Overview: Tanzania is one of the poorest countries in the world. The economy is heavily dependent on agriculture, which accounts for about 58% of GDP, provides 85% of exports, and employs 90% of the work force. Industry accounts for 8% of GDP and is mainly limited to processing agricultural products and light consumer goods. The economic recovery program announced in mid-1986 has generated notable increases in agricultural production and financial support for the program by bilateral donors. The World Bank, the International Monetary Fund, and bilateral donors have provided funds to rehabilitate Tanzania's deteriorated economic infrastructure. Growth in 1991-92 featured a pickup in industrial production and a substantial increase in output of minerals led by gold.
National product: GDP - exchange rate conversion - $7.2 billion (1992 est.)
National product real growth rate: 4.5% (1992 est.)

Overview: Thailand's economy recovered rapidly from the political unrest in May 1992 to post an impressive 7% growth rate for the year. Thailand, one of the more advanced developing countries in Asia, depends on exports of manufactures and the development of the service sector to fuel the country's rapid growth. The trade and current account deficits fell in 1992; much of Thailand's recent imports have been for capital equipment suggesting that the export sector is poised for further growth. With foreign investment slowing, Bangkok is working to increase the generation of capital domestically. Prime Minister CHUAN's government - Thailand's fifth government in less than two years - is pledged to continue Bangkok's probusiness policies, and the return of a democratically elected government has improved business confidence. Nevertheless, CHUAN must overcome divisions within his ruling coalition to complete much needed infrastructure development programs if Thailand is to remain an attractive place for business investment. Over the longer-term, Bangkok must produce more college graduates with technical training and upgrade workers' skills to continue its rapid economic development.

Overview: The economy is heavily dependent on subsistence agriculture, which accounts for about 33% of GDP and provides employment for 78% of the labor force. Primary agricultural exports are cocoa, coffee, and cotton, which together account for about 30% of total export earnings. Togo is self-sufficient in basic foodstuffs when harvests are normal. In the industrial sector phosphate mining is by far the most important activity, with phosphate exports accounting for about 40% of total foreign exchange earnings. Togo serves as a regional commercial and trade center. The government, over the past decade, with IMF and World Bank support, has been implementing a number of economic reform measures to encourage foreign investment and bring revenues in line with expenditures. Political unrest, including private and public sector strikes throughout 1991 and 1992, has jeopardized the reform program and has disrupted vital economic activity.

Overview: Tokelau's small size, isolation, and lack of resources greatly restrain economic development and confine agriculture to the subsistence level. The people must rely on aid from New Zealand to maintain public services, annual aid being substantially greater than GDP. The principal sources of revenue come from sales of copra, postage stamps, souvenir coins, and handicrafts. Money is also remitted to families from relatives in New Zealand.

Overview: The economy's base is agriculture, which employs about 70% of the labor force and contributes 40% to GDP. Coconuts, bananas, and vanilla beans are the main crops and make up two-thirds of exports. The country must import a high proportion of its food, mainly from New Zealand. The manufacturing sector accounts for only 11% of GDP. Tourism is the primary source of hard currency earnings, but the island remains dependent on sizable external aid and remittances to offset its trade deficit.

National product: GDP - exchange rate conversion - $92 million (FY90)

National product real growth rate: 0.4% (FY92 est.)

Overview: Trinidad and Tobago's petroleum-based economy has begun to emerge from a lengthy depression in the last few years. The economy fell sharply through most of the 1980s, largely because of the decline in oil prices. This sector accounts for 80% of export earnings and almost 20% of GDP. The government, in response to the oil revenue loss, pursued a series of austerity measures that pushed the unemployment rate as high as 22% in 1988. The economy showed signs of recovery in 1990 and 1991, however, helped along by rising oil prices. Agriculture employs only about 11% of the labor force and produces about 3% of GDP. Since this sector is small, it has been unable to absorb the large numbers of the unemployed. The government currently seeks to diversify its export base.

Overview: The economy depends primarily on petroleum, phosphates, tourism, and exports of light manufactures. Following two years of drought-induced economic decline, the economy came back strongly in 1990-92 as a result of good harvests, continued export growth, and higher domestic investment. High unemployment has eroded popular support for the government, however, and forced Tunis to slow the pace of economic reform. Nonetheless, the government appears committed to implementing its IMF-supported structural adjustment program and to servicing its foreign debt.

Overview: After an impressive economic performance through most of the 1980s, Turkey has experienced erratic rates of economic growth since 1988 - ranging from a high of 9.2% in 1990 to a low of 0.9% in 1991. Strong consumer demand and increased public investment led the way to a strong 5.9% growth in 1992. Chronic high inflation is Turkey's most serious economic problem, leading to high interest rates and the rapid depreciation of the Turkish lira. The huge public sector deficit - about 12% of GDP - and the Treasury's heavy reliance on Central Bank financing of the deficit are the major causes of Turkish inflation. Meanwhile, wage increases in both the public and private sector have outpaced productivity gains, limited the government's ability to reduce current expenditures, and hindered the return to profitability of many private companies. Agriculture remains an important economic sector, employing about half of the work force, contributing 18% to GDP, and accounting for about 20% of exports. The government has launched a multibillion-dollar development program in the southeastern region, which includes the building of a dozen dams on the Tigris and Euphrates Rivers to generate electric power and irrigate large tracts of farmland. The Turkish economy will probably continue to grow faster than the West European average in 1993, but the shaky coalition government of Prime Minister DEMIREL - which has seen its parliamentary majority shrink from 36 to 11 seats during its first year in power - is unlikely to risk further erosion of its support by implementing the belt-tightening measures necessary to substantially reduce inflation.

Overview: Like the other 15 former Soviet republics, Turkmenistan faces enormous problems of economic adjustment - to move away from Moscow-based central planning toward a system of decisionmaking by private entrepreneurs, local government authorities, and, hopefully, foreign investors. This process requires wholesale changes in supply sources, markets, property rights, and monetary arrangements. Industry - with 10% of the labor force - is heavily weighted toward the energy sector, which produced 11% of the ex-USSR's gas and 1% of its oil. Turkmenistan ranked second among the former Soviet republics in cotton production, mainly in the irrigated western region, where the huge Karakumskiy Canal taps the Amu Darya. The general decline in national product accelerated in 1992, principally because of inability to obtain spare parts and disputes with customers over the price of natural gas.

Overview: Tuvalu consists of a scattered group of nine coral atolls with poor soil. The country has no known mineral resources and few exports. Subsistence farming and fishing are the primary economic activities. The islands are too small and too remote for development of a tourist industry. Government revenues largely come from the sale of stamps and coins and worker remittances. Substantial income is received annually from an international trust fund established in 1987 by Australia, New Zealand, and the UK and supported also by Japan and South Korea.

Overview: Uganda has substantial Natural Resources, including fertile soils, regular rainfall, and sizable mineral deposits of copper and cobalt. The economy has been devastated by widespread political instability, mismanagement, and civil war since independence in 1962, keeping Uganda poor with a per capita income of about $300. (GDP remains below the levels of the early 1970s, as does industrial production.) Agriculture is the most important sector of the economy, employing over 80% of the work force. Coffee is the major export crop and accounts for the bulk of export revenues. Since 1986 the government has acted to rehabilitate and stabilize the economy by undertaking currency reform, raising producer prices on export crops, increasing prices of petroleum products, and improving civil service wages. The policy changes are especially aimed at dampening inflation, which was running at over 300% in 1987, and boosting production and export earnings. In 1990-92, the economy has turned in a solid performance based on continued investment in the rehabilitation of infrastructure, improved incentives for production and exports, and gradually improving domestic security.

Overview: After Russia, the Ukrainian republic was far and away the most important economic component of the former Soviet Union producing more than three times the output of the next-ranking republic. Its fertile black soil generated more than one fourth of Soviet agricultural output, and its farms provided substantial quantities of meat, milk, grain and vegetables to other republics. Likewise, its well-developed and diversified heavy industry supplied equipment and raw materials to industrial and mining sites in other regions of the former USSR. In 1992 the Ukrainian government liberalized most prices and erected a legal framework for privatizing state enterprises while retaining many central economic controls and continuing subsidies to state production enterprises. In November 1992 the new Prime Minister KUCHMA launched a new economic reform program promising more freedom to the agricultural sector, faster privatization of small and medium enterprises, and stricter control over state subsidies. Even so, the magnitude of the problems and the slow pace in building new market-oriented institutions preclude a near-term recovery of output to the 1990 level.

Overview: The UAE has an open economy with one of the world's highest incomes per capita outside the OECD nations. This wealth is based on oil and gas, and the fortunes of the economy fluctuate with the prices of those commodities. Since 1973, the UAE has undergone a profound transformation from an impoverished region of small desert principalities to a modern state with a high standard of living. At present levels of production, crude oil reserves should last for over 100 years.

Location: Western Europe, bordering on the North Atlantic Ocean and the North Sea, between Ireland and France

Area:

total area:	244,820 km2
land area:	241,590 km2
comparative area:	slightly smaller than Oregon

Note: includes Rockall and Shetland Islands

Land Boundaries:

total:	360 km
Ireland:	360 km

Coastline: 12,429 km

Maritime Claims:

continental shelf:as defined in continental shelf orders or in accordance with agreed upon boundaries

exclusive fishing zone:	200 nm
territorial sea:	12 nm

International Disputes: Northern Ireland question with Ireland; Gibraltar question with Spain; Argentina claims Falkland Islands (Islas Malvinas); Argentina claims South Georgia and the South Sandwich Islands; Mauritius claims island of Diego Garcia in British Indian Ocean Territory; Rockall continental shelf dispute involving Denmark, Iceland, and Ireland (Ireland and the UK have signed a boundary agreement in the Rockall area); territorial claim in Antarctica (British Antarctic Territory)

Climate: temperate; moderated by prevailing southwest winds over the North Atlantic Current; more than half of the days are overcast

Terrain: mostly rugged hills and low mountains; level to rolling plains in east and southeast

Natural Resources: coal, petroleum, natural gas, tin, limestone, iron ore, salt, clay, chalk, gypsum, lead, silica

Land Use:

arable land:	29%
permanent crops:	0%
meadows and pastures:	48%
forest and woodland:	9%
other:	14%

Irrigated Land: 1,570 km2 (1989)

Environment: pollution control measures improving air and water quality; because of heavily indented coastline, no location is more than 125 km from tidal waters

Note: lies near vital North Atlantic sea lanes; only 35 km from France and now being linked by tunnel under the English Channel

Overview: The UK is one of the world's great trading powers and financial centers, and its economy ranks among the four largest in Europe. The economy is essentially capitalistic; over the past thirteen years the ruling Tories have greatly reduced public ownership and contained the growth of social welfare programs. Agriculture is intensive, highly mechanized, and efficient by European standards, producing about 60% of food needs with only 1% of the labor force. The UK has large coal, natural gas, and oil reserves, and primary energy production accounts for 12% of GDP, one of the highest shares of any industrial nation. Services, particularly banking, insurance, and business services, account by far for the largest proportion of GDP while industry continues to decline in importance, now employing only 25% of the work force and generating 21% of GDP. The economy is emerging out of its 3-year recession with only weak recovery expected in 1993. Unemployment is hovering around 10% of the labor force. The government in 1992 adopted a pro-growth strategy, cutting interest rates sharply and removing the pound from the European exchange rate mechanism. Excess industrial capacity probably will moderate inflation which for the first time in a decade is below the EC average. The major economic policy question for Britain in the 1990s is the terms on which it participates in the financial and economic integration of Europe.

Location: North America, between Canada and Mexico

Area:

total area:	9,372,610 km2
land area:	9,166,600 km2

comparative area: about half the size of Russia; about three-tenths the size of Africa; about one-half the size of South America (or slightly larger than Brazil); slightly smaller than China; about two and one-half times the size of Western Europe

Note: includes only the 50 states and District of Columbia

Land Boundaries:

total:	12,248 km
Canada:	8,893 km (including 2,477 km with Alaska)
Cuba:	29 km (US naval base at Guantanamo)
Mexico:	3,326 km

Coastline: 19,924 km

Maritime Claims:

contiguous zone:	24 nm
continental shelf:	200 m or depth of exploitation
exclusive economic zone:	200 nm
territorial sea:	12 nm

International Disputes: maritime boundary disputes with Canada (Dixon Entrance, Beaufort Sea, Strait of Juan de Fuca); US Naval Base at Guantanamo is leased from Cuba and only mutual agreement or US abandonment of the area can terminate the lease; Haiti claims Navassa Island; US has made no territorial claim in Antarctica (but has reserved the right to do so) and does not recognize the claims of any other nation; Republic of Marshall Islands claims Wake Island

Climate: mostly temperate, but tropical in Hawaii and Florida and arctic in Alaska, semiarid in the great plains west of the Mississippi River and arid in the Great Basin of the southwest; low winter temperatures in the northwest are ameliorated occasionally in January and February by warm chinook winds from the eastern slopes of the Rocky Mountains

Terrain: vast central plain, mountains in west, hills and low mountains in east; rugged mountains and broad river valleys in Alaska; rugged, volcanic topography in Hawaii

Natural Resources: coal, copper, lead, molybdenum, phosphates, uranium, bauxite, gold, iron, mercury, nickel, potash, silver, tungsten, zinc, petroleum, natural gas, timber

Land Use:

arable land:	20%
permanent crops:	0%
meadows and pastures:	26%
forest and woodland:	29%

other: 25%

Irrigated Land: 181,020 km2 (1989 est.)
Environment: pollution control measures improving air and water quality; agricultural fertilizer and pesticide pollution; management of sparse natural water resources in west; desertification; tsunamis, volcanoes, and earthquake activity around Pacific Basin; permafrost in northern Alaska is a major impediment to development
Note: world's fourth-largest country (after Russia, Canada, and China)

Overview: The US has the most powerful, diverse, and technologically advanced economy in the world, with a per capita GDP of $23,400, the largest among major industrial nations. The economy is market oriented with most decisions made by private individuals and business firms and with government purchases of goods and services made predominantly in the marketplace. In 1989 the economy enjoyed its seventh successive year of substantial growth, the longest in peacetime history. The expansion featured moderation in wage and consumer price increases and a steady reduction in unemployment to 5.2% of the labor force. In 1990, however, growth slowed to 1% because of a combination of factors, such as the worldwide increase in interest rates, Iraq's invasion of Kuwait in August, the subsequent spurt in oil prices, and a general decline in business and consumer confidence. In 1991 output fell by 1%, unemployment grew, and signs of recovery proved premature. Growth picked up to 2.1% in 1992. Unemployment, however, remained at nine million, the increase in GDP being mainly attributable to gains in output per worker. Ongoing problems for the 1990s include inadequate investment in economic infrastructure, rapidly rising medical costs, and sizable budget and trade deficits.

National product: GDP - purchasing power equivalent - $5.951 trillion (1992)

National product real growth rate: 2.1% (1992)

National product per capita: $23,400 (1992)

Overview: Uruguay is a small economy with favorable climate, good soils, and solid hydropower potential. Economic development has been held back by excessive government regulation of economic detail and 50% to 130% inflation. After several years of sluggish growth, real GDP jumped by about 8% in 1992. The rise is attributable mainly to an increase in Argentine demand for Uruguayan exports, particularly agricultural products and electricity. In a major step toward greater regional economic cooperation, Uruguay in 1991 had joined Brazil, Argentina, and Paraguay in forming the Southern Cone Common Market (Mercosur). A referendum in December 1992 overturned key portions of landmark privatization legislation, dealing a serious blow to President LACALLE's broad economic reform plan.

Overview: Although Uzbekistan accounted for only 3.4% of total Soviet output, it produced two-thirds of the USSR's cotton and ranks as the fourth largest global producer. Moscow's push for ever-increasing amounts of cotton had included massive irrigation projects which caused extensive environmental damage to the Aral Sea and rivers of the republic. Furthermore, the lavish use of chemical fertilizers has caused extensive pollution and widespread health problems. Recently the republic has sought to encourage food production at the expense of cotton. The small industrial sector specializes in such items as agricultural machinery, mineral fertilizers, vegetable oil, and bridge cranes. Uzbekistan also has some important Natural Resources including gold (about 30% of former Soviet production), uranium, and natural gas. The Uzbek Government has encouraged some land reform but has shied away from other aspects of economic reform. Output and living standards continued to fall in 1992 largely because of the cumulative impact of disruptions in supply that have followed the dismemberment of the USSR.

Overview: Petroleum is the backbone of the economy, accounting for 23% of GDP, 70% of central government revenues, and 82% of export earnings in 1992. President PEREZ introduced an economic readjustment program when he assumed office in February 1989. Lower tariffs and the removal of price controls, a free market exchange rate, and market-linked interest rates threw the economy into confusion, causing an 8% decline in GDP in 1989. However, the economy recovered part way in 1990 and grew by 10.4% in 1991 and 7.3% in 1992, led by the non-petroleum sector.

National product: GDP - exchange rate conversion - $57.8 billion (1992 est.)

National product real growth rate: 7.3% (1992 est.)

National product per capita: $2,800 (1992 est.)

Inflation rate (consumer prices): 32% (1992 est.)

Unemployment rate: 8.4% (1992 est.)

Overview: Vietnam has made significant progress in recent years moving away from the planned economic model and toward a more effective market-based economic system. Most prices are now fully decontrolled and the Vietnamese currency has been effectively devalued and floated at world market rates. In addition, the scope for private sector activity has been expanded, primarily through decollectivization of the agricultural sector and introduction of laws giving legal recognition to private business. Despite such positive indicators, the country's economic turnaround remains tenuous. Nearly three-quarters of export earnings are generated by only two commodities, rice and crude oil. Meanwhile, industrial production stagnates, burdened by uncompetitive state-owned enterprises the government is unwilling or unable to privatize. Unemployment looms as the most serious problem with over 25% of the workforce without jobs and population growth swelling the ranks of the unemployed yearly.

Overview: The economy is limited to traditional subsistence agriculture, with about 80% of the labor force earning its livelihood from agriculture (coconuts and vegetables), livestock (mostly pigs), and fishing. About 4% of the population is employed in government. Revenues come from French Government subsidies, licensing of fishing rights to Japan and South Korea, import taxes, and remittances from expatriate workers in New Caledonia. Wallis and Futuna imports food, fuel, clothing, machinery, and transport equipment, but its exports are negligible, consisting of copra and handicrafts.

Note: The war between Israel and the Arab states in June 1967 ended with Israel in control of the West Bank and the Gaza Strip, the Sinai, and the Golan Heights. As stated in the 1978 Camp David Accords and reaffirmed by President Bush's post-Gulf crisis peace initiative, the final status of the West Bank and the Gaza Strip, their relationship with their neighbors, and a peace treaty between Israel and Jordan are to be negotiated among the concerned parties. Camp David further specifies that these negotiations will resolve the respective boundaries. Pending the completion of this process, it is US policy that the final status of the West Bank and the Gaza Strip has yet to be determined. In the view of the US, the term West Bank describes all of the area west of the Jordan River under Jordanian administration before the 1967 Arab-Israeli war. However, with respect to negotiations envisaged in the framework agreement, it is US policy that a distinction must be made between Jerusalem and the rest of the West Bank because of the city's special status and circumstances. Therefore, a negotiated solution for the final status of Jerusalem could be different in character from that of the rest of the West Bank.

Overview: Economic progress in the West Bank has been hampered by Israeli military administration and the effects of the Palestinian uprising (intifadah). Industries using advanced technology or requiring sizable investment have been discouraged by a lack of local capital and restrictive Israeli policies. Capital investment consists largely of residential housing, not productive assets that would enable local firms to compete with Israeli industry. A major share of GNP is derived from remittances of workers employed in Israel and Persian Gulf states, but such transfers from the Gulf dropped dramatically after Iraq invaded Kuwait in August 1990. In the wake of the Persian Gulf crisis, many Palestinians have returned to the West Bank, increasing unemployment, and export revenues have plunged because of the loss of markets in Jordan and the Gulf states. Israeli measures to curtail the intifadah also have pushed unemployment up and lowered living standards. The area's economic outlook remains bleak.

contingent upon resolution of sovereignty issue

International Disputes: claimed and administered by Morocco, but sovereignty is unresolved and the UN is attempting to hold a referendum on the issue; the UN-administered cease-fire has been currently in effect since September 1991

Climate: hot, dry desert; rain is rare; cold offshore air currents produce fog and heavy dew

Terrain: mostly low, flat desert with large areas of rocky or sandy surfaces rising to small mountains in south and northeast

Natural Resources: phosphates, iron ore

Land Use:

arable land:	0%
permanent crops:	0%
meadows and pastures:	19%
forest and woodland:	0%
other:	81%

Irrigated Land: NA km2

Environment: hot, dry, dust/sand-laden sirocco wind can occur during winter and spring; widespread harmattan haze exists 60% of time, often severely restricting visibility; sparse water and arable land

Overview: Agriculture employs more than half of the labor force, contributes 50% to GDP, and furnishes 90% of exports. The bulk of export earnings comes from the sale of coconut oil and copra. The economy depends on emigrant remittances and foreign aid to support a level of imports several times export earnings. Tourism has become the most important growth industry, and construction of the first international hotel is under way.

Overview: Whereas the northern city Sanaa is the political capital of a united Yemen, the southern city Aden, with its refinery and port facilities, is the economic and commercial capital. Future economic development depends heavily on Western-assisted development of promising oil resources. Former South Yemen's willingness to merge stemmed partly from the steady decline in Soviet economic support. The low level of domestic industry and agriculture have made northern Yemen dependent on imports for virtually all of its essential needs. Large trade deficits have been compensated for by remittances from Yemenis working abroad and by foreign aid. Once self-sufficient in food production, northern Yemen has become a major importer. Land once used for export crops - cotton, fruit, and vegetables - has been turned over to growing qat, a mildly narcotic shrub chewed by Yemenis which has no significant export market. Oil export revenues started flowing in late 1987 and boosted 1988 earnings by about $800 million. Economic growth in former South Yemen has been constrained by a lack of incentives, partly stemming from centralized control over production decisions, investment allocation, and import choices.

Overview: In 1992, Zaire's formal economy continued to disintegrate. While meaningful economic figures are difficult to come by, Zaire's hyperinflation, the largest government deficit ever, and plunging mineral production have made the country one of the world's poorest. Most formal transactions are conducted in hard currency as indigenous bankNotes have lost almost all value, and a barter economy now flourishes in all but the largest cities. Most individuals and families hang on grimly through subsistence farming and petty trade. The government has not been able to meet its financial obligations to the International Momentary Fund or put in place the financial measures advocated by the IMF. Although short-term prospects for improvement are dim, improved political stability would boost Zaire's long-term potential to effectively exploit its vast wealth of mineral and agricultural resources.

Overview: The economy has been in decline for more than a decade with falling imports and growing foreign debt. Economic difficulties stem from a chronically depressed level of copper production and ineffective economic policies. In 1991 real GDP fell by 2% and in 1992 by 3% more. An annual population growth of more than 3% has brought a decline in per capita GDP of 50% over the past decade. A high inflation rate has also added to Zambia's economic woes in recent years, as well as severe drought in the crop year 1991/92.

National product: GDP - exchange rate conversion - $4.7 billion (1992 est.)

National product real growth rate: -3% (1992 est.)

Overview: Agriculture employs three-fourths of the labor force and supplies almost 40% of exports. The manufacturing sector, based on agriculture and mining, produces a variety of goods and contributes 35% to GDP. Mining accounts for only 5% of both GDP and employment, but supplies of minerals and metals account for about 40% of exports. Wide fluctuations in agricultural production over the past six years have resulted in an uneven growth rate, one that on average has matched the 3% annual increase in population. Helped by an IMF/World Bank structural adjustment program, output rose 3.5% in 1991. A severe drought in 1991/92 caused the economy to contract by about 10% in 1992.

Overview: Taiwan has a dynamic capitalist economy with considerable government guidance of investment and foreign trade and partial government ownership of some large banks and industrial firms. Real growth in GNP has averaged about 9% a year during the past three decades. Export growth has been even faster and has provided the impetus for industrialization. Agriculture contributes about 4% to GNP, down from 35% in 1952. Taiwan currently ranks as number 13 among major trading countries. Traditional labor-intensive industries are steadily being replaced with more capital- and technology-intensive industries. Taiwan has become a major investor in China, Thailand, Indonesia, the Philippines, and Malaysia. The tightening of labor markets has led to an influx of foreign workers, both legal and illegal.

None of the successor states of the former Yugoslavia, including Serbia and Montenegro, have been permitted to participate solely on the basis of the membership of the former Yugoslavia in the United Nations General Assembly and Economic and Social Council and their subsidiary bodies and in various United Nations Specialized Agencies. The United Nations, however, permits the seat and nameplate of the SFRY to remain, permits the SFRY mission to continue to function, and continues to fly the flag of the former Yugoslavia. For a variety of reasons, a number of other organizations have not yet taken action with regard to the membership of the former Yugoslavia. The World Factbook therefore continues to list Yugoslavia under international organizations where the SFRY seat remains or where no action has yet been taken.

Metric Interrelationships

Conversions from a multiple or submultiple to the basic units of meters, liters, or grams can be done using the table. For example, to convert from kilometers to meters, multiply by 1,000 (9.26 kilometers equals 9,260 meters) or to convert from meters to kilometers, multiply by 0.001 (9,260 meters equals 9.26 kilometers).

Multimedia World Factbook is a CD-ROM product based on the Central Intelligence Agency's publication, *The World Factbook 1993,* which can be obtained by US Government officials directly from their own organization or through liaison channels from the Central Intelligence Agency. *The World Factbook 1993* is also available in microfiche, magnetic tape, or diskettes for microcomputers.

The World Factbook is produced annually by the Central Intelligence Agency for the use of US Government officials, and the style, format, coverage, and content are designed to meet their specific requirements. Information was provided by the Bureau of the Census, Central Intelligence Agency, Defense Intelligence Agency, Defense Nuclear Agency, Department of State, Foreign Broadcast Information Service, Maritime Administration, National Science Foundation (Polar Information Program), Naval Maritime Intelligence Center, Office of Territorial and International Affairs, US Board on Geographic Names, US Coast Guard, and others.

Administrative divisions:

The numbers, designatory terms, and first-order administrative divisions are generally those approved by the US Board on Geographic Names (BGN). Changes that have been reported but not yet acted on by BGN are noted.

Area:

Total area is the sum of all land and water areas delimited by international boundaries and/or coastlines. Land area is the aggregate of all surfaces delimited by international boundaries and/or coastlines, excluding inland water bodies (lakes, reservoirs, rivers). Comparative areas are based on total area equivalents. Most entities are compared with the entire US or one of the 50 states. The smaller entities are compared with Washington, DC (178 km2, 69 miles 2) or The Mall in Washington, DC (0.59 km2, 0.23 miles 2,146 acres).

Birth rate:

The average annual number of births during a year per 1,000 population at midyear; also known as crude birth rate.

Dates of information:

In general, information available as of 1 January 1993 was used in the preparation of this edition. Population figures are estimates for 1 July 1993, with population growth rates estimated for calendar year 1993. Major political events have been updated through June 1993.

Death rate:

The average annual number of deaths during a year per l,000 population at midyear; also known as crude death rate.

Digraphs:

The digraph is a two-letter "country code" that precisely identifies every entity without overlap, duplication, or

omission. AF, for example, is the digraph for Afghanistan. It is a standardized geopolitical data element promulgated in the Federal Information Processing Standards Publication (FIPS) 10-3 by the National Bureau of Standards (US Department of Commerce) and maintained by the Office of the Geographer (US Department of State). The digraph is used to eliminate confusion and incompatibility in the collection, processing, and dissemination of area-specific data and is particularly useful for interchanging data between databases.

Diplomatic representation:

The US Government has diplomatic relations with 180 nations. The US has diplomatic relations with 174 of the 182 UN members (excluding the Socialist Federal Republic of Yugoslavia whose status in the UN is unclear)--the exceptions are Angola, Bhutan, Cuba, Iran, Iraq, Macedonia, North Korea, and Vietnam. In addition, the US has diplomatic relations with 7 nations that are not in the UN-Andorra, Holy See, Kiribati, Nauru, Switzerland, Tonga, and Tuvalu.

Economic aid:

This entry refers to bilateral commitments of official development assistance (ODA), which is defined as government grants that are administered with the promotion of economic development and welfare of LDCs as their main objective and are concessional in character and contain a grant element of at least 25%, and other official flows (OOF) or transactions by the official sector whose main objective is other than development motivated or whose grant element is below the 25% threshold for ODA. OOF transactions include official export credits (such as Ex-Im Bank credits), official equity and portfolio investment, and debt reorganization by the official sector that does not meet concessional terms. Aid is considered to have been committed when agreements are initialed by the parties involved and constitute a formal declaration of intent.

Entities:

Some of the nations, dependent areas, areas of special sovereignty, and governments included in this publication are not independent, and others are not officially recognized by the US Government. "Nation" refers to a people politically organized into a sovereign state with a definite territory. "Dependent area" refers to a broad category of political entities that are associated in some way with a nation. Names used for page headings are usually the short-form names as approved by the US Board on Geographic Names. There are 266 entities in *The World Factbook* that may be categorized as follows:

note: The US Government does not recognize the four so-called independent homelands of Bophuthatswana, Ciskei, Transkei, and Venda in South Africa. Exchange rate: The value of a nation's monetary unit at a given date or over a given period of time, as expressed in units of local currency per US dollar and as determined by international market forces or official fiat.

Gross domestic product (GDP): The value of all goods and services produced domestically in a given year.

Gross national product (GNP): The value of all goods and services produced domestically in a given year, plus income earned abroad, minus income earned by foreigners from domestic production.

Gross world product (GWP): The aggregate value of all goods and services produced worldwide in a given

year.

GNP/GDP methodology: In the "Economy" section, GNP/GDP dollar estimates for the OECD countries, the former Soviet republics, and the East European countries are derived from purchasing power parity (PPP) calculations rather than from conversions at official currency exchange rates. The PPP method normally involves the use of international dollar price weights, which are applied to the quantities of goods and services produced in a given economy. In addition to the lack of reliable data from the majority of countries, the statistician faces a major difficulty in specifying, identifying, and allowing for the quality of goods and services. The division of a PPP GNP/GDP estimate in dollars by the corresponding estimate in the local currency gives the PPP conversion rate. One thousand dollars will buy the same market basket of goods in the US as one thousand dollars--converted to the local currency at the PPP conversion rate-- will buy in the other country. GNP/GDP estimates for the LDCs, on the other hand, are based on the conversion of GNP/GDP estimates in local currencies to dollars at the official currency exchange rates. Because currency exchange rates depend on a variety of international and domestic financial forces that often have little relation to domestic output, use of these rates is less satisfactory for calculating GNP/GDP than the PPP method. Furthermore, exchange rates may suddenly go up or down by 10% or more because of market forces or official fiat whereas real output has remained unchanged. One additional caution: the proportion of, say, defense expenditures as a percent of GNP/GDP in local currency accounts may differ substantially from the proportion when GNP/GDP accounts are expressed in PPP terms, as, for example, when an observer estimates the dollar level of Russian or Japanese military expenditures; similar problems exist when components are expressed in dollars under currency exchange rate procedures. Finally, as academic research moves forward on the PPP method, we hope to convert all GNP/GDP estimates to this method in future editions of The World Factbook.

Growth rate (population): The annual percent change in the population, resulting from a surplus (or deficit) of births over deaths and the balance of migrants entering and leaving a country. The rate may be positive or negative.

Illicit drugs: There are five categories of illicit drugs--narcotics, stimulants, depressants (sedatives), hallucinogens, and cannabis. These categories include many drugs legally produced and prescribed by doctors as well as those illegally produced and sold outside medical channels.

Cannabis (Cannabis sativa) is the common hemp plant, which provides hallucinogens with some sedative properties, and includes marijuana (pot, Acapulco gold, grass, reefer), tetrahydrocannabinol (THC, Marinol), hashish (hash), and hashish oil (hash oil).

Coca (Erythroxylon coca) is a bush, and the leaves contain the stimulant cocaine. Coca is not to be confused with cocoa, which comes from cacao seeds and is used in making chocolate, cocoa, and cocoa butter.

Cocaine is a stimulant derived from the leaves of the coca bush.

Depressants (sedatives) are drugs that reduce tension and anxiety and include chloral hydrate, barbiturates (Amytal, Nembutal, Seconal, Phenobarbital), benzodiazepines (Librium, Valium), methaqualone (Quaalude), glutethimide (Doriden), and others (Equanil, Placidyl, Valmid).

Drugs are any chemical substances that effect a physical, mental, emotional, or behavioral change in an individual.

Drug abuse is the use of any licit or illicit chemical substance that results in physical, mental, emotional, or behavioral impairment in an individual.

Hallucinogens are drugs that affect sensation, thinking, self-awareness, and emotion. Hallucinogens include LSD (acid, microdot), mescaline and peyote (mexc, buttons, cactus), amphetamine variants (PMA, STP, DOB), phencyclidine (PCP, angel dust, hog), phencyclidine analogues (PCE, PCPy, TCP), and others (psilocybin, psilocyn).

Hashish is the resinous exudate of the cannabis or hemp plant (Cannabis sativa).

Heroin is a semisynthetic derivative of morphine.

Marijuana is the dried leaves of the cannabis or hemp plant (Cannabis sativa).

Narcotics are drugs that relieve pain, often induce sleep, and refer to opium, opium derivatives, and synthetic substitutes. Natural narcotics include opium (paregoric, parepectolin), morphine (MS-Contin, Roxanol), codeine (Tylenol w/codeine, Empirin w/codeine, Robitussan AC), and thebaine. Semisynthetic narcotics include heroin (horse, smack), and hydromorphone (Dilaudid). Synthetic narcotics include meperidine or Pethidine (Demerol, Mepergan), methadone (Dolophine, Methadose), and others (Darvon, Lomotil).

Opium is the milky exudate of the incised, unripe seedpod of the opium poppy.

Opium poppy (Papaver somniferum) is the source for many natural and semisynthetic narcotics.

Poppy straw concentrate is the alkaloid derived from the mature dried opium poppy.

Qat (kat, khat) is a stimulant from the buds or leaves of Catha edulis that is chewed or drunk as tea.

Stimulants are drugs that relieve mild depression, increase energy and activity, and include cocaine (coke, snow, crack), amphetamines (Desoxyn, Dexedrine), phenmetrazine (Preludin), methylphenidate (Ritalin), and others (Cylert, Sanorex, Tenuate).

Infant mortality rate: The number of deaths to infants under one year old in a given year per l,000 live births occurring in the same year.

International disputes: This category includes a wide variety of situations that range from traditional bilateral boundary disputes to unilateral claims of one sort or another. Information regarding disputes over international boundaries and maritime boundaries has been reviewed by the Department of State. References to other situations may also be included that are border or frontier relevant, such as resource disputes, geopolitical questions, or irredentist issues. However, inclusion does not necessarily constitute official acceptance or recognition by the US Government.

Irrigated land: The figure refers to the number of km 2 that is artificially supplied with water.

Land use: Human use of the land surface is categorized as arable land--land cultivated for crops that are replanted after each harvest (wheat, maize, rice); permanent crops--land cultivated for crops that are not replanted after each harvest (citrus, coffee, rubber); meadows and pastures--land permanently used for herbaceous forage crops; forest and woodland land--under dense or open stands of trees; and other--any land type not specifically mentioned above (urban areas, roads, desert).

Leaders: The chief of state is the titular leader of the country who represents the state at official and ceremonial functions but is not involved with the day- to-day activities of the government. The head of government is the administrative leader who manages the day-to-day activities of the government. In the UK, the monarch is the chief of state, and the Prime Minister is the head of government. In the US, the President is both the chief of state and the head of government.

Life expectancy at birth: The average number of years to be lived by a group of people all born in the same year, if mortality at each age remains constant in the future.

Literacy: There are no universal definitions and standards of literacy. Unless otherwise noted, all rates are based on the most common definition--the ability to read and write at a specified age. Detailing the standards that individual countries use to assess the ability to read and write is beyond the scope of this publication.

Maps: All maps will be available only in the printed version of The World Factbook for the foreseeable future.

Maritime claims: The proximity of neighboring states may prevent some national claims from being extended the full distance.

Merchant marine: All ships engaged in the carriage of goods. All commercial vessels (as opposed to all nonmilitary ships), which excludes tugs, fishing vessels, offshore oil rigs, etc.; also, a grouping of merchant ships by nationality or register.

Captive register: A register of ships maintained by a territory, possession, or colony primarily or exclusively for the use of ships owned in the parent country; also referred to as an offshore register, the offshore equivalent of an internal register. Ships on a captive register will fly the same flag as the parent country, or a local variant of it, but will be subject to the maritime laws and taxation rules of the offshore territory. Although the nature of a captive register makes it especially desirable for ships owned in the parent country, just as in the internal register, the ships may also be owned abroad. The captive register then acts as a flag of convenience register, except that it is not the register of an independent state.

Flag of convenience register: A national register offering registration to a merchant ship not owned in the flag state. The major flags of convenience (FOC) attract ships to their register by virtue of low fees, low or nonexistent taxation of profits, and liberal manning requirements. True FOC registers are characterized by having relatively few of the ships registered actually owned in the flag state. Thus, while virtually any flag can be used for ships under a given set of circumstances, an FOC register is one where the majority of the merchant fleet is owned abroad. It is also referred to as an open register.

Flag state: The nation in which a ship is registered and which holds legal jurisdiction over operation of the ship, whether at home or abroad. Differences in flag state maritime legislation determine how a ship is manned and taxed and whether a foreign-owned ship may be placed on the register.

Internal register: A register of ships maintained as a subset of a national register. Ships on the internal register fly the national flag and have that nationality but are subject to a separate set of maritime rules from those on the main national register. These differences usually include lower taxation of profits, manning by foreign nationals, and, usually, ownership outside the flag state (when it functions as an FOC register). The Norwegian International Ship Register and Danish International Ship Register are the most notable examples of an internal register. Both have been instrumental in stemming flight from the national flag to flags of convenience and in attracting foreign owned ships to the Norwegian and Danish flags.

Merchant ship: A vessel that carries goods against payment of freight; commonly used to denote any nonmilitary ship but accurately restricted to commercial vessels only.

Register: The record of a ship's ownership and nationality as listed with the maritime authorities of a country; also, the compendium of such individual ships' registrations. Registration of a ship provides it with a nationality and makes it subject to the laws of the country in which registered (the flag state) regardless of the nationality of the ship's ultimate owner.

Money figures: All are expressed in contemporaneous US dollars unless otherwise indicated.

National product: The total output of goods and services in a country in a given year. See Gross domestic product (GDP), Gross national product (GNP), and GNP/GDP methodology.

Net migration rate: The balance between the number of persons entering and leaving a country during the year per 1,000 persons (based on midyear population). An excess of persons entering the country is referred to as net immigration (3.56 migrants/1,000 population); an excess of persons leaving the country as net emigration (-9.26 migrants/1,000 population).

Population: Figures are estimates from the Bureau of the Census based on statistics from population censuses, vital registration systems, or sample surveys pertaining to the recent past, and on assumptions about future trends.

Total fertility rate: The average number of children that would be born per woman if all women lived to the end of their childbearing years and bore children according to a given fertility rate at each age.

Years: All year references are for the calendar year (CY) unless indicated as fiscal year (FY).

Note: Information for the US and US dependencies was compiled from material in the public domain and does not represent Intelligence Community estimates. The Handbook of International Economic Statistics, published annually in September by the Central Intelligence Agency, contains detailed economic information for the Organization for Economic Cooperation and Development (OECD) countries, Eastern Europe, the newly independent republics of the former nations of Yugoslavia and the Soviet Union, and selected other countries. The Handbook can be obtained wherever *The World Factbook* is available.

Displays the same topic heading for the previous country.

Displays the same topic heading for the next country.

Prints the selected topic.

Copies the selected text to the Windows clipboard.

Displays the map for the selected country.

Countries found in *Multimedia World Factbook* are divided into the following ten regions: North America, South America, Europe, Central America and the Caribbean, The Middle East, Asia, Africa, The Antarctic, The Arctic, and Oceania.

Note: Countries have been divided into regions based primarily on their location on the globe and on which region map they appear. For this reason some countries will appear listed in more than one region.

Clicking on the flag for any country will play the national anthem for that country. *Note:* Some territories do not have flags and/or national anthems. In the event that the country does not have a flag, or if we were unable to obtain a flag for the country, this flag will appear instead: **If a country has no national anthem, there will be no sound played when the flag is clicked.**

Displays *World Factbook* information about the geography of the country.

Displays *World Factbook* information about the people of the country.

Displays *World Factbook* information about the government of the country.

Displays *World Factbook* information about the economy of the country.

Displays *World Factbook* information about the defense forces of the country.
