ALEXANDER TURNBULL LIBRARY

The Alexander Turnbull Library is a world-renowned research library within the National Library of New Zealand Te Puna Mātauranga o Aotearoa. This “library within a library” holds the national documentary collection relating to New Zealand and the Pacific. Other significant holdings are the major research collection on John Milton and his times and New Zealand’s largest collection of early printed books and fine printing.

The Library is based on the collections of Alexander Horsburgh Turnbull, a wealthy Wellington merchant who died in 1918 and bequeathed to the nation some 55,000 volumes as well as manuscripts, paintings and sketches, which he had collected during his lifetime.

Turnbull’s original collection continues to guide the Library’s collecting policy, but new initiatives, such as the Archive of New Zealand Music, the New Zealand Cartoon Archive and the Oral History Centre, reflect the importance of these media in recording aspects of the New Zealand experience.

The Turnbull collections include nearly 258,000 books, 16,500 rare books, 48,000 maps, 90,000 items of printed ephemera, nearly 1,600,000 photographs and negatives, 60,000 paintings, drawings and prints, and 23,835 discs, tapes and cassettes covering music and oral history. The Library also holds approximately 1,373 linear metres (one kilometre high!) of newspapers, 6.5 kilometres of manuscripts, 4,100 metres of serials and 52,050 microfilm reels. The collections continue to grow through donations, purchases and the legal deposit provisions of the National Library Act 1965, as amended.

The heritage collections are not available for borrowing, but material can be selected from them and consulted in special areas of the Alexander Turnbull Library. Duplicate copies of material from the collections, such as microform copies of serials, newspapers and manuscripts, are made available through inter-library lending, while other rare and original works are accessible through exhibitions and online services. Eventually, more and more of the information the Library holds will be available in electronic form so that people can access it from anywhere in the country, or the world.

The National Library’s website (<http://www.natlib.govt.nz>) can tell you more about the Alexander Turnbull Library, and keep you up to date with latest developments.

NATIONAL LIBRARY OF NEW ZEALAND TE PUNA MĀTAURANGA

[Services](#)

[Collections](#)

[History](#)

[Access](#)

The National Library of New Zealand Te Puna Mātauranga o Aotearoa is one of New Zealand's leading cultural and information centres. The unique role of the National Library is to collect and maintain literature and information resources that relate to New Zealand and the Pacific, to make this information readily available, and to preserve the documentary heritage of this country for future generations.

As a government department, the National Library is responsible to, and is funded by, the Government. It undertakes research and provides policy advice on [library](#) and information issues directly to its Minister.

NATIONAL LIBRARY OF NEW ZEALAND - Services

The National Library is developing its services to ensure that all New Zealanders have access to the information they require for their social, cultural and commercial development. At the time of going to press, the Library is working with the National Library of Australia to develop a national document and information service that will give access to information held within New Zealand and throughout the world.

The Library produces the New Zealand National Bibliography, a listing of all works published in New Zealand and hosts the New Zealand Bibliographic Network, which enables cooperative collection-building and inter-library lending. In addition, it creates Index New Zealand, an online database which indexes currently published articles from magazines. This index is hosted on Kiwinet, the library's information network.

The National Library's Reference and Research Service is a second-resort service, which means that it answers enquiries for information that cannot be satisfied from resources in other New Zealand libraries. The information service provides access to information throughout the Library's extensive collections of New Zealand and overseas books, serials and music collections, and local and overseas databases. The Library also provides access to its collections through an ongoing programme of exhibitions and related events and an active touring schedule.

Through 14 centres around the country, the School Libraries 2000 Programme offers New Zealand schools a curriculum information service, a school library development programme, and product support.

NATIONAL LIBRARY OF NEW ZEALAND - Collections

The National Library's heritage collections include both published and unpublished material and are held in the Alexander Turnbull Library, a "library within a library" (see Alexander Turnbull Library). These resources are supported by a comprehensive collection of general reference and information material.

The National Library's general collections cover a broad range of areas, but are increasingly focused on New Zealand and Pacific material. The general reference collection supplements the collections of all New Zealand libraries with advanced level reference information resources across all subject areas, with particular attention given to current information. The Library also holds the most extensive collections of children's literature in New Zealand. The National Library is committed to building a collection of audio books to supplement other libraries' services to people with print disabilities.

NATIONAL LIBRARY OF NEW ZEALAND - History

The National Library was established in 1966 by an Act of Parliament. The National Library Act 1965 brought together the General Assembly Library, begun in 1858 to serve members of Parliament; the Alexander Turnbull Library, opened in 1920 and based on the collections bequeathed to the Crown by Alexander Horsburgh Turnbull in 1918; and the National Library Service, which began in 1945 with the amalgamation of the Country Library Service and the School Library Service.

Since its inception, the National Library has evolved in response to political and economic developments and the changing library and information needs of New Zealanders. In 1985, the General Assembly Library separated from the National Library and is now known as the Parliamentary Library. By 1987, Library staff, collections and other material had been moved from 14 sites around Wellington to the new National Library building in Molesworth Street, and in 1988, the Library became an autonomous government department, no longer administered by the Department of Education. In 1990, the National Film Library became part of the National Library.

NATIONAL LIBRARY OF NEW ZEALAND - Access

The National Library is attempting to make much more of the information it holds available in electronic form. The Library's website (<http://www.natlib.govt.nz>) contains information about the latest developments, services and activities.

Also available through the internet (<http://www.xtra.co.nz>) is Index New Zealand, a large electronic database of current New Zealand and Pacific related information compiled by the National Library.

DAVID BATEMAN LTD

David Bateman Ltd, a family owned and operated company founded in 1979, is one of the largest, totally independent general book publishers in New Zealand. Evidence of its commitment to providing authoritative information for New Zealanders on a wide range of subjects is provided by its catalogue of over 150 titles in print and between thirty and forty new titles published each year for the domestic market. Some recent titles worthy of note are:

The Complete New Zealand Gardener (1996 Montana Book Awards finalist) by Geoff Bryant and Eion Scarrow; *The Ultimate New Zealand Gardening Book* edited by Geoff Bryant; *New Zealand Geographic* published in association with New Zealand Geographic Publications Ltd; *The Casual Eating Series* published in association with Corbans Wines; the fourth edition of the *Bateman New Zealand Encyclopedia* edited by Gordon McLauchlan; a reprint of *200 Years of New Zealand Painting* by Gil Docking and Michael Dunn, *The Art of Alfred Sharpe* and *The Art of Lois White* in association with the Auckland City Art Gallery.

Other notable publications include *Scars on the Heart* (New Zealanders at War) in association with the Auckland Museum; *Mataora - Contemporary Maori Art* in association with the Arts Council of New Zealand; in preparation *The Polynesians: A History of Polynesian Migration* by Michael King in association with the British Museum.

The company also exports the work of a number of New Zealand writers and photographers who are authorities on subjects ranging from gardening to the Antarctic - and write for international markets. Over fifty such titles have been published in the last five years.

If you would like to know more about the titles published and distributed by David Bateman Ltd or if you think you have ideas for non-fiction books which would be useful to either New Zealanders or people overseas, the editorial staff at David Bateman Ltd would be delighted to hear from you.

WILD SOUTH BIRDS OF NEW ZEALAND

The first edition of this product was *New Zealand Birds and How to Photograph Them*. Released in 1993 the original was New Zealand's first home-grown multimedia title. These are some of the early reviewers comments:

"a well-conceived and executed product. It has a pleasant and easy-to-use interface that facilitates navigation. This disc should have an appeal and interest that extends well beyond the borders of New Zealand. It's highly recommended for armchair travellers, bird aficionados, and those who want an example of an excellent user interface."

- *CD ROM World April 1994*

"an exceptionally fine product and certainly the best "bird" CD-ROM seen to date"
Editor's Choice, Rating *****

- *Canadian CD-ROM News 8 (2) 1993:*

Wild South Birds of New Zealand is even better! The text has been updated, the interface improved and TVNZ Natural History (producers of the renowned "Wild South" television documentaries) have provided award-winning film footage of New Zealand birdlife. An entertaining and informative reference for everyone with an interest in birds or photography, the CD-ROM includes:

- all 323 living bird species on the New Zealand list
- 192 species illustrated
- 561 superb photographs
- 125 videos (more than 39 minutes)
- 220 sounds (more than 67 minutes)
- 62 photographic tips
- 20 pictures for use as Windows™ wallpapers

Information is accessed by common bird names, habitats or by North or South Island locations. Those with a scientific bent will appreciate the taxonomic index.

Selective Chronology of New Zealand History Pre-1760

925

Ethnologists in the 19th and early 20th centuries estimated, using generational counting from Maori genealogy chants, that the mythological Polynesian navigator Kupe visited NZ in this year.

1150

The same scholars set this date as the visit of Toi, another major figure of Maori mythology.

1350

This was the year estimated for the arrival of the Great Fleet which brought the first mass settlement of NZ by Polynesian explorers. These three dates were part of NZ 'history' for many years, but all are now questioned by modern scholars and even the existence of the Great Fleet itself is largely discounted. The debate on time and the nature of early Polynesian settlement continues.

1642

Abel Tasman, the first European to discover NZ, calls it Staten Landt and annexes it for Holland.

Selective Chronology of New Zealand History 1760-1779

1769

Captain Cook lands at Gisborne on 9 October; the Union Jack is hoisted later at Mercury Bay, and possession taken on behalf of King George III. Two months later, the Frenchman, De Surville, lands at Doubtless Bay.

1770

Captain Cook crosses Cook Strait and lands in the South Island at Queen Charlotte Sound, where the British flag is hoisted and possession of NZ taken again.

1772

Marion du Fresne lands at the Bay of Islands and annexes NZ as France Australe in the name of King Louis XV of France.

1773

Cook returns with the ships *Resolution* and *Adventure*. Lands at Queen Charlotte Sound. Two sheep put ashore but survive only a few days.

Selective Chronology of New Zealand History 1780-1799

1791

Discovery of Chatham Islands by Captain Broughton in HMS *Chatham*. Arrival of first recorded whaling ship, *William and Ann*.

1792

First sealing gang at Dusky Sound.

1793

Spanish navigator, Malaspina, visits Dusky Sound.

Selective Chronology of New Zealand History 1800-1819

1814

Arrival of Samuel Marsden at the Bay of Islands. Introduction of sheep, cattle, horses and poultry. First sermon preached on Christmas Day.

1815

Thomas Holloway King is the first European child born in NZ.

1816

Thomas Kendall opens first school for Maori children.

1819

Raids on Taranaki and Port Nicholson by Te Rauparaha and Nene.

Selective Chronology of New Zealand History 1820-1839

1820

Hongi Hika, chief of the Ngapuhi tribe, visits England and meets King George IV.

1821

Beginning of Hongi Hika's wars with muskets. Two thousand people killed at Tamaki.

1823

Wesleyan Methodist Mission established at Whangaroa Harbour. First Church of England marriage in NZ between Philip Tapsell and Maria Ringa, a Maori girl, who deserted him shortly afterwards. Jurisdiction of New South Wales Courts of Justice extended to British subjects in NZ.

1825

First attempt at colonisation with 60 immigrants aboard *Rosanna*. Only four stayed.

1827

French Pass, Croisilles Harbour and Waitemata Harbour charted by Dumont D'Urville aboard *Astrolabe*. Mission station at Whangaroa destroyed by Hongi Hika's forces.

1830

Agricultural mission and school established at Waimate North, where the first acorn was planted.

1831

First Pakeha wedding between W G Puckey and Matilda Davis at Paihia.

1833

James Busby, appointed British Resident in NZ in 1832, arrives at Bay of Islands.

1834

Clash between British troops and Maori in the capture of Waimate Pa, Taranaki. Merino sheep farm established by James Bell Wright on Mana Island. James Busby, on behalf of the British Government, presents a flag to North Auckland chiefs, NZ's first flag.

1835

Export of first wool to Sydney. Visit of Charles Darwin and Robert FitzRoy (later Governor of NZ). Chatham Islands conquered by Ngati Awa tribes. Declaration of Independence by the Tribes of NZ, organised by Busby.

1836

Colenso begins printing New Testament in Maori.

1837

Hobson first visits NZ to protect Europeans from Maori fighting. Self-styled Sovereign Chief of NZ, Baron de Thierry, arrives at Hokianga.

1838

NZ Colonisation Company founded. Arrival of Bishop Pompallier and formation of

Catholic Mission at Hokianga. James Clendon becomes first United States Consul in NZ.

1839

Governor of New South Wales given jurisdiction over British subjects in NZ. Arrival in Petone of Colonel William Wakefield of the NZ Company.

Selective Chronology of New Zealand History 1840-1859

1840

Arrival of first settlers at Port Nicholson aboard *Aurora* and *Oriental*. Treaty of Waitangi signed. NZ Banking Company established at Kororareka. British sovereignty proclaimed. Settlements formed at Akaroa and Canterbury Plains. Arrival of John Logan Campbell at Coromandel. Inauguration of the town of Auckland with a regatta on Waitemata Harbour. The NZ Act passed by the Imperial Parliament. Union Bank of Australia operates from a shed in Petone.

1841

NZ proclaimed independent of New South Wales and declared a Crown Colony. Captain William Hobson assumes office as Governor of the Crown Colony. Settlement formed at New Plymouth. Selwyn consecrated Bishop of NZ at Lambeth Chapel. Settlement at Manukau Harbour. Arrival of first settlers at Wanganui.

1842

Death of Governor Hobson. Settlement formed at Nelson. Auckland named official capital. Arrival of Bishop Selwyn. Wellington proclaimed a borough, the first in NZ. Maori Church opened at Putiki, Wanganui. First Supreme Court sitting held in Auckland.

1843

Clash with Maori in the Wairau Valley and death of Captain Wakefield and other Europeans. Severe earthquake in Wanganui. Captain FitzRoy assumes office as Governor.

1844

Signal flagstaff at Kororareka cut down by Hone Heke. Selection of land for the Dunedin settlement made. The NZ Company suspends all colonising operations for lack of finance.

1845

Captain George Grey assumes office as Governor. Kororareka looted by Hone Heke's forces and settlers flee to Auckland. Artillery bombardment at Ohaeawai Pa.

1846

Maori hostilities in Hutt Valley; Wellington under martial law. Beginning of Heaphy, Fox and Brunner exploration of the West Coast of the South Island. Ruapekapeka occupied by British forces, terminating Heke's war. Te Rauparaha captured at Plimmerton. Country divided into two provinces, New Munster and New Ulster. Ordinance passed for establishment of constabulary. Arrival of first steam vessel in NZ waters, HMS *Driver*.

1847

Maori attack on Wanganui. First shipment of butter and cheese from the South Island to Sydney.

1848

Otago Association founds settlement at Dunedin. Auckland's first recorded snowfall. Discovery of coal at Brunner on West Coast. Sir George Grey appointed Governor-in-Chief over the Islands of NZ. Severe earthquake centred on Wellington. Survey by HMS *Acheron* begins.

1849

Survey of Lyttelton begins. Crown lands ordinance passed. Public meetings in Dunedin to protest against a proposal to introduce convicts. Bishop Selwyn founds St Stephen's school in Auckland for Maori boys. Royal Charter granted for incorporation of the Canterbury Association.

1850

Canterbury Association founds settlement at Christchurch. NZ Company's charter surrendered and all its interests revert to the Imperial Government. John Godley, leader of the Canterbury Pilgrims, arrives in Lyttelton. Robert Heaton Rhodes arrives in Canterbury. Bishop Pompallier arrives at Auckland with French and Irish priests and Sisters of Charity.

1851

Appointment of Lieutenant-Colonel R H Wynyard as Lieutenant-Governor of New Ulster. The NZ Society formed at Wellington; first president Sir George Grey. *Governor Wynyard*, the first steamship built in NZ, launched at Freemans Bay, Auckland.

1852

Tamihana Te Rauparaha presented to Queen Victoria. Discovery of Coromandel gold by C Ring in the Kapanga Stream. Constitution Act divides country into six provinces with representative institutions. Arrival in Wellington of Edward Gibbon Wakefield. Boundaries of the provinces of Canterbury, Wellington, Nelson, Otago and New Plymouth defined. New Plymouth became Taranaki in 1858.

1854

Opening of the first General Assembly in Auckland.

1855

Severe earthquake on both sides of Cook Strait. Adhesive, imperforate postage stamps on sale. Gold discovered at Milton. First Imperial Troops land at New Plymouth. Thomas Gore Browne assumes office as Governor.

1856

First meetings of Auckland and Wellington Chambers of Commerce. Appointment of the first ministry under responsible government with Sewell as Premier.

1857

Te Wherowhero elected Potatau I, the first Maori King.

1858

New Provinces Act passed. Hawke's Bay province constituted. Royal Decree makes Nelson a bishop's see and a city.

1859

Marlborough Province established. Discovery of gold in Buller River. NZ Insurance Company established.

Selective Chronology of New Zealand History 1860-1879

1860

Hostilities around Taranaki. First battle fought at Waireka, heralding the land wars. Discovery Grey River coal by Julius von Haast. Philippe Viard constituted first Roman Catholic Bishop of Wellington. Governor Gore Browne holds a major meeting of Maori chiefs at Kohimarama, Auckland.

1861

Truce arranged with Taranaki Maori. Bank of NZ incorporated at Auckland. Southland Province established. Gold discovered at Waipori and Gabriel's Gully, Otago. Sir George Grey assumes office as Governor for a second term.

1862

Opening of first electric telegraph line between Christchurch and Lyttelton. First gold shipment leaves Dunedin for London. Loss of many public records in wreck of SS *White Swans*.

1863

289 lives lost in wreck of HMS *Orpheus* on the Manukau Bar. Beginning of Waikato war. Colonial government states its intention to assume control of Maori Affairs. Canterbury Agricultural and Pastoral Association formed.

1864

Battles of Rangiaohia, Orakau, Gate Pa and Te Ranga. Gold discoveries in Marlborough and on the west coast of the South Island. Beginning of Main Trunk Line between Mangatawhiri and Meremere. Sir George Grey confiscates Maori land in Waikato.

1865

Wellington becomes seat of government. End of Waikato war. Dunedin hosts NZ Exhibition. Arrival of military settlers from Australia. Hauhau uprising. Murder of Reverend Volkner at Opotiki, and of government office and companions at Whakatane. Auckland streets first lit by gas.

1866

Cook Strait telegraph cable completed. Opening of Christchurch to Hokitika road. Cobb and Co coaches run from Canterbury to the West Coast.

1868

Te Kooti leads prison escape from the Chatham Islands aboard seized schooner *Rifleman*. Sails to Gisborne and subsequently slays 32 Europeans. Sir George Bowen assumes office as Governor. Formation of the Royal Society of NZ.

1869

Founding of University of Otago. The NZ Cross instituted by Order in Council. Government Life Insurance Office established. Celebrations for first royal visit by HRH Duke of Edinburgh.

1870

Final departure of Imperial Forces. Further fighting with Te Kooti. Vogel announces a Public Works Policy, requiring an overseas loan of £10 million. Possession taken of Bounty Island. Beginning of Auckland to San Francisco mail service. Second visit of Duke of Edinburgh.

1871

Beginning of large-scale railway construction under Public Works policy. Deer liberated in Otago. Dr Isaac Featherston appointed first NZ Agent-General in London. Auckland constituted a city.

1872

Creation of Public Trust Office. Telegraph communication links Auckland, Wellington and southern provinces.

1873

NZ Shipping Company established. Founding of Canterbury University. Westland Province separates from Canterbury. Sir James Fergusson assumes office as Governor.

1874

First NZ steam engine built at Invercargill. Arrival of the first Chinese on the West Coast goldfields. Opening of the railway line from Wellington to Lower Hutt.

1875

Union Steam Ship Company established. The Marquess of Normanby assumes office as Governor.

1876

NZ and Australia connected by cable, providing communication with UK. Provincial institutions abolished and the country divided into counties and boroughs.

1877

Education Act provides free compulsory and secular education. Land Act in force, replacing 66 statutes, and allows Crown lands to be dealt with in a uniform manner.

1878

Opening of Christchurch to Dunedin railway line.

1879

Adult male suffrage introduced. Triennial Parliaments Act passed. 34 lives lost in Kaitangata coal-mine explosion. Auckland-Hamilton railway line completed. Sir Hercules Robinson assumes office as Governor.

Selective Chronology of New Zealand History 1880-1899

1880

First steam train service in Christchurch between Cathedral Square and the railway station. Te Aroha proclaimed a gold field. School of Agriculture opens at Lincoln. Sir Arthur Gordon assumes office as Governor.

1881

Wreck of SS Tararua at Waipapa Point with loss of 131 lives. First cable tramway service in Dunedin in Rattray Street. Dunedin hosts Industrial Exhibition. Auckland and Christchurch telephone exchanges open. Te Whiti arrested and Parihaka village attacked by government forces.

1882

First shipment of frozen meat leaves Port Chalmers for England aboard the Dunedin. Christchurch hosts the NZ Exhibition.

1883

NZ Shipping Company introduces direct steam ship communication between NZ and England. Te Kooti and Maori prisoners pardoned under Amnesty Act. Sir William Jervois assumes office as Governor. Opening of Auckland University College.

1884

First overseas tour by a rugby team results in wins in all eight games in New South Wales. Unemployed demonstrate in Auckland. Sale of alcohol in King Country forbidden by Government Proclamation. Visit of the Maori King to England.

1885

Introduction of mail service between NZ and Pacific Islands.

1886

Tarawera eruption destroys Pink and White Terraces, taking more than 100 lives. Oil discovered in Taranaki. Opening of School of Mines, Thames.

1887

Kermadec Islands annexed. Reefton becomes first town to have electricity. Francis Redwood created Archbishop and Metropolitan of NZ. Mountain tops of Tongariro, Ngauruhoe and Ruapehu presented to the nation as a National Park in a deed signed by Te Heuheu Tukino IV. First inland parcel post service.

1888

Cook Islands proclaimed a British Protectorate. Visit of General William Booth of the Salvation Army. Nelson brothers open the country's first freezing works in Gisborne. Auckland and Wellington streets lit with electricity.

1889

Plural voting abolished. Dunedin hosts NZ and South Seas Exhibition. First NZ-built locomotive completed at Addington. The Earl of Onslow assumes office as Governor.

1890

Great Maritime strike. First election under one-man-one-vote system.

1891

Land and Income Tax Act passed.

1892

Polynesian Society's first meeting in Wellington. The Earl of Glasgow assumes office as Governor.

1893

Franchise extended to women. Introduction of Licensing Poll. Bank Note Issue Act passed making banknotes legal tender. Death of Te Kooti.

1894

Industrial Conciliation and Arbitration Act passed, making NZ the first country to introduce compulsory arbitration. Mahuta Tawhiao Potatua Te Wherowhero elected Maori King.

1895

Soup kitchen for unemployed opens in Dunedin. Government purchases the Hermitage, Mt Cook. Family Homes Protection Act passed.

1896

67 deaths in Brunner mine explosion. General census puts population at 703,360.

1897

Founding of Victoria University, Wellington. Pigeongram service introduced between Auckland and Great Barrier Island. Stamps for this service were issued the following year. The Earl of Ranfurly assumes office as Governor.

1898

Old Age Pensions Act passed, the first of its kind in the world.

1899

First celebrations of Labour Day commemorating the eight-hour day. First of ten NZ Contingents sent to South Africa.

Selective Chronology of New Zealand History 1900-1919

1900

Public Health Act passed.

1901

Penny postage adopted. Cook Islands and Niue annexed. Population 815,853 in census. Visit of Duke and Duchess of York.

1902

Pacific Cable operates between NZ, Australia and Fiji. First Chatham Islands Maori Council opened by Maui Pomare.

1903

Empire Day proclaimed. State Fire Insurance Act passed. Lord Kitchener visits NZ. Maori King Mahuta Te Wherowhero appointed to Legislative Council.

1904

Probable flight of R W Pearse near Timaru. Christchurch Cathedral consecrated and opened. Lord Plunket assumes office as Governor.

1905

Workers Dwelling Act passed. NZ representative in London becomes known as High Commissioner. Hon W P Reeves first to hold the post. First All Black team tours Great Britain. Old Age Pension increased to £26 per annum.

1906

Christchurch hosts NZ International Exhibition. Census puts population at 888,578.

1907

NZ constituted a Dominion. Fire destroys Parliament Buildings. Study of the Tuhoe tribal history by Elsdon Best completed after 12 years. Hon Sir Joseph Ward called to the Privy Council.

1908

Wellington-Auckland rail link completed. Departure of Sir Ernest Shackleton on Antarctic Expedition.

1909

Introduction of compulsory military training. First regular express train between Auckland and Wellington. Stamp-vending machine invented and manufactured in NZ.

1938

Social Security Act passed.

1939

War with Germany results in recruitment of Second NZ Expeditionary Force commanded by Major-General Freyberg. Britain to purchase NZ farm produce for duration of War. Introduction of social security for hospital patients. Battle of the River Plate in which HMNZS *Achilles* took part in the destruction of the *Admiral Graf Spee*.

Selective Chronology of New Zealand History 1940-1959

1940

Introduction of ballots for military service. Death of Prime Minister Savage, succeeded by Fraser. Sinking of HMS *Niagara* off NZ coast by enemy mine. Most of gold on board salvaged following year. Founding of Tasman Empire Airways (TEAL). German mines laid across Hauraki Gulf.

1941

Mobilisation of Territorial Forces after declaration of War with Japan. Introduction of pharmaceutical and general medical benefits. Sir Cyril Newall assumes office as Governor-General.

1942

Complete mobilisation of military forces and conscription into Emergency Reserve Corps of all male British subjects in NZ between the ages of 18 and 45. Introduction of rationing and control of industrial manpower. Mobilisation of women for essential work.

1943

21 deaths in Cromwell-Dunedin Express derailment. NZ Expeditionary Force involved in action against Japan in the Pacific. Loss of 49 lives in Japanese prisoner-of-war riot at Featherston Camp. Mrs E R Kingston of Auckland becomes NZ's first jurywoman. The *Wahine* sinks the mine-sweeper *South Sea* off Point Halswell, Wellington.

1944

Introduction of Australia-NZ Agreement providing for collaboration on matters of mutual interest. Formation of CORSO.

1945

End of war in Europe and Pacific. Opening of South Island main trunk railway, establishing connection from Picton to Bluff. NZ signs United Nations Charter at San Francisco.

1946

Family benefit of £1 a week made universal. Sir Bernard Freyberg assumes office as Governor-General.

1947

Appointment of Local Government Commission. Mabel Howard becomes first woman cabinet minister. Parliament adopts Statute of Westminster. Grounding of TSMV *Wanganella* on Barretts Reef, Wellington. Refloated 18 days later. 41 deaths in fire at Ballantyne's store, Christchurch. Polio epidemic closes schools.

1948

Appointment of Licensing Control Commission. Re-introduction of petrol rationing. Ruapehu and Ngauruhoe in simultaneous eruption. Meat rationing ends. Maori to be excluded from All Black team for South Africa in NZ Rugby Union ruling.

1949

Referendum agrees to compulsory military training. Arrival at Auckland of NZ Navy's first four frigates. Violent 8 day eruption of Ngauruhoe. Labour Government defeated. Sidney Holland becomes Prime Minister.

1950

Petrol and butter rationing ends. Departure of K Force and three Royal Navy frigates for Korea. Auckland hosts British Empire Games. Relaxation of sterling funds and securities controls.

1951

Prolonged waterfront dispute; state of emergency proclaimed. Signing of Pacific Security Treaty by Australia, NZ, US (ANZUS) which comes into force following year. K Force sees action in Korea. *Wahine* wrecked in the Arafura Sea en route to Japan.

1952

Yvette Williams wins gold medal for record-breaking long jump at Helsinki Olympics. Rimutaka tunnel collapse; one life is lost. Sir Willoughby Norrie assumes office as Governor-General. Population passes two million.

1953

Tangiwai rail disaster claims 51 lives. Visit of Queen Elizabeth II and Duke of Edinburgh. Edmund Hillary and Sherpa Tenzing conquer Mt Everest. Godfrey Bowen establishes world record by shearing 456 sheep in nine hours. Visit of US Vice-President Richard Nixon.

1954

Centennial of parliamentary government. NZ takes seat on United Nations Security Council. Four-minute mile broken by Roger Bannister in three minutes and 59.4 seconds. Franz Josef Hotel destroyed by fire.

1955

Kawerau Pulp and Paper Mill in operation.

1956

Roxburgh and Whakamaru power stations in operation. Census figures: 2,036,911 Europeans, 137,341 Maori. Visit by Duke of Edinburgh.

1957

Court of Appeal constituted; first sitting 1958. NZ Antarctic Expedition established at Scott Base, McMurdo Sound. Dairy produce given unrestricted duty-free access into Britain for ten years. Lord Cobham assumes office as Governor-General. Fire destroys the Hermitage, Mt Cook.

1958

Introduction of PAYE tax system. Generation of geothermal steam power at Wairakei. Sir Edmund Hillary reaches South Pole, travelling overland from Scott Base. Visit by HM the Queen Mother. First shipment of beef cattle to the USA. First heart-lung machine in operation at Green Lane Hospital, Auckland.

1959

Opening of Auckland Harbour Bridge. Distinguished Maori, C M Bennett, appointed High Commissioner to Malaya. Precision approach radar operational at Wellington airport, the first in the world.

Selective Chronology of New Zealand History 1960-1979

1960

Peter Snell and Murray Halberg win Olympic gold medals. Beginning of regular television transmission from Auckland. Government Service Equal Pay Act passed. Murray Halberg sets world record for three miles (4.827 km) at Auckland in 13 minutes and 11.4 seconds. Two deep earthquakes recorded, centred 600 km north of Taranaki.

1961

Tasman Empire Airways becomes wholly NZ-owned and is later re-named Air NZ. Population reaches 2,417,543. A H Reed walks from North Cape to Bluff at the age of 85. Formation of Outward Bound Trust.

1962

First Cook Strait ferry, *Aramoana*, in service between Wellington and Picton. Maori Education Foundation campaign opens. Opening of Taranaki gas well. Sir Bernard Fergusson assumes office as Governor-General. Royal tour by King Bhumipol and Queen Sirikit of Thailand. Sir Guy Powles becomes first Ombudsman. Independence of Western Samoa. Peter Snell established mile (1.609 km) world record at Wanganui in 3 minutes and 54.4 seconds and half-mile (804 km) world record at Christchurch in one minute and 45.1 seconds.

1963

Indecent Publications Act passed. Tour by Queen and Duke of Edinburgh. Barrie Davenport becomes first European swimmer to conquer Cook Strait in 11 hours and 13 minutes. First regular flight of Operation Deep Freeze between Christchurch and McMurdo Sound in Antarctica.

1964

Opening of Marsden Point oil refinery, Whangarei. Opening of Christchurch-Lyttelton road tunnel. Auckland population reaches half a million. Beatles pop group tours NZ. Peter Snell wins Olympic 800 and 1500 metres gold medals.

1965

Negotiation of Limited Free Trade Agreement with Australia (NAFTA). Cook Islands become self-governing. Prime Minister Holyoake announces NZ support for US in Vietnam.

1966

NZ's labour force reaches one million. 29 deaths in sinking of collier *Kaitawa*. Opening of international airport at Mangere, Auckland.

1967

NZ's first roll-on-roll-off ship, *Hawera*, arrives. Sir Arthur Porritt takes office as Governor-General. Introduction of decimal currency. Denis Hulme wins world motor-racing championship. Illegal flight by Captain Fred Ladd in his amphibian under Auckland Harbour Bridge. Introduction of breath and blood tests for suspected drinking drivers. Referendum results in hotel hours extended to 10 pm.

1968

TEV *Wahine* sinks in severe storm in Wellington Harbour with the loss of 51 lives. \$10,000 gold recovered by divers from the wreck of the *Elingamite*. Inangahua earthquake causes three deaths, injuries and land upheaval. Tour by Duke of Edinburgh.

1969

First output of steel from Glenbrook Mill. Voting age lowered to 20. Oil strike offshore at Taranaki.

1970

Protests at visit of US Vice-President Spiro Agnew. Departure of All Black rugby team for South Africa draws protests. State visit by King and Queen of Tonga. Kaimai tunnel collapse, four deaths. Visit of Canadian Prime Minister Pierre Trudeau.

1971

Bluff aluminium smelter in operation. Warkworth satellite station opens.

1972

Containerised shipping operations between Auckland and Wellington and the UK. Sir Denis Blundell assumes office as Governor-General. Collapse of JBL Group of Companies.

1973

NZ joins Organisation for Economic Cooperation and Development (OECD). Introduction of colour television. First step of Equal Pay Act effective.

1974

Christchurch hosts 10th British Commonwealth Games. Death of Prime Minister Norman Kirk.

1975

Trade deals established with Middle East countries, Japan and USSR. John Walker becomes first man to break the 3 minute 50 second mile barrier, running 3 minutes 49.4 seconds at Goteborg, Sweden, in August.

1976

Subsidies on bread, egg, butter and flour abolished. Subsidies on electricity, rail and Post Office charges cut. EEC import quotas for NZ butter set till 1980. Introduction of metric system of weights and measures. NAFTA extended to 10 years. African nations walk out of Montreal Olympics over NZ's sporting links with South Africa. Introduction of Subscriber Toll Dialling (STD). Visit of nuclear warship USS *Truxton* prompts protests.

1977

Visit by Queen and Duke of Edinburgh as part of Silver Jubilee celebrations. Gleneagles Agreement signed on Commonwealth ties with South Africa. New National Superannuation scheme in operation. Inflation and unemployment become major issues. Sir Keith Holyoake assumes office as Governor-General. Territorial Sea and Exclusive Economic Zone Act passed, establishing 20-mile economic zone.

1978

Merger of Air NZ and NAC. 25,000 registered unemployed. Government approves production of methanol from Maui gas. 2,000 evacuated in Taiere Plain floods.

1979

Price surveillance scheme replaces price control of many commodities and services. Severe landslip at Abbotsford. 257 deaths in Air NZ DC10 crash on Mt Erebus, Antarctica. Wellington hosts 25th Commonwealth Conference. Introduction of 'Carless Day' scheme. Visit of American nuclear submarine *Haddo*. Ban on weekend petrol sales.

Selective Chronology of New Zealand History 1980-1995

1980

Rabbit farming becomes legal. Soviet Ambassador Sofinsky expelled. 80-day strike at NZ Forest Products Kinleith Mill. Marginal Lands Board row. Social Credit wins East Coast Bays by-election. Registered unemployed exceed 40,000. Saturday trading legalised. Sir David Beattie assumes office as Governor-General.

1981

Announcement of 'Freedom of Information' policy. National uproar when Australian cricket team bowls underarm to ensure victory at end of one-day international against NZ. John Walker sets new NZ mile record in three minutes and 50.58 seconds. Royal Commission Mr Justice Mahon blames Air NZ for Erebus crash. \$5 million raised by Telethon. Allison Roe wins women's section of New York marathon in a world record time of 2 hours, 25 minutes and 28 seconds. Census population 3,195,800. The ugliest riots in two generations occurred at rugby grounds and in the streets between supporters and opponents of the Springbok tour of NZ. The government ruled that politics should not interfere with sport and the police were called upon to protect the playing of games on the tour from protesters.

1982

Three per cent cut ordered in budgets of government departments. 12-month wage, price and rent freeze imposed. NZ provides 'non-combative' military support to Britain in Falklands crisis. NZ rowing team wins gold medal at world championships in Lucerne. NZ wins 5 gold medals, 8 silver and 13 bronze at Brisbane Commonwealth Games. First kohango-reo established. CER (Closer Economic Relations) agreement signed by NZ and Australian governments.

1983

Visit by HRH the Prince and Princess of Wales and Prince William. Price and wage freeze extended until 1984. Chris Lewis reaches finals of men's single tennis championship at Wimbledon but is defeated by John McEnroe in three sets. Visit of nuclear-powered US Navy frigate USS *Texas* sparks off protests. NZ Party founded by Bob Jones. Official Information Act comes into force.

1984

Prime Minister Robert Muldoon calls a snap general election; Labour Party led by David Lange wins. Finance Minister Roger Douglas begins the deregulation of the economy with a policy known as 'Rogernomics'. NZ has its most successful Olympic Games ever. NZ ratifies the United Nations Convention on the Elimination of All Forms of Discrimination Against Women. Population of the Auckland region exceeds that of the South Island for the first time.

1985

NZ's new anti-nuclear policy results in US warship, USS *Buchanan*, being refused port entry as it cannot be ascertained whether or not it is nuclear-armed; the US begins cancelling ANZUS association as a result. The NZ dollar is floated. The Greenpeace

protest vessel *Rainbow Warrior* is sunk in Auckland Harbour by French government agents, causing an international row. Part-Maori writer Keri Hulme wins Britain's literary Booker Prize for her novel *Bone People*. Jim McLay replaces Sir Robert Muldoon as Leader of the Opposition. The Anglican Primate of NZ, Paul Reeves, is appointed Governor-General. The first case of locally contracted AIDS is reported.

1986

Jim Bolger replaces Jim McLay as Leader of the Opposition. Halley's Comet arrives on time but is disappointingly dim. The Queen and Prince Philip visit NZ and an egg is thrown at the monarch. The Soviet cruise ship, *Mikhail Lermontov*, sinks in the Marlborough Sounds; one crew member dies. The Homosexual Law Reform Bill is passed. French *Rainbow Warrior* terrorists Prieur and Mafart, convicted and sentenced in 1985, are handed over to the French government. NZ competitors win 38 medals at 13th Commonwealth Games in Edinburgh. Goods and Services Tax (GST) introduced. NZ's KZ7 wins its way into the challengers' final for the America's Cup.

1987

NZ loses America's Cup challengers' final to *Stars and Stripes*. Share prices plummet. Government-owned Bank of NZ offers shareholding to private investors. Bay of Plenty earthquake, 6.5 on the Richter Scale; no deaths and few casualties but severe damage to industrial plant and commercial houses. NZ wins World Cup (Rugby Union), defeating France in the final at Auckland. Labour wins general election.

1988

Number of unemployed exceeds 100,000. Cyclone Bola causes enormous damage to south half of the North Island, mostly to East Coast/Poverty Bay. Government announces it will return Bastion Point land, Auckland, to its Maori owners. Judge Silvia Cartwright delivers report on cervical cancer inquiry; damns National Women's Hospital. NZ wins 3 gold, 2 silver and 8 bronze medals at Seoul Olympics. Richard Hadlee gets his 374th test wicket for a new world record.

1989

Goods and Service Tax (GST) rises from 10% to 12.5%. Prime Minister David Lange resigns and is replaced by Geoffrey Palmer with Helen Clark first woman Deputy Prime Minister. An annual balance of payments surplus is achieved for the first time ever since 1973. Sunday trading begins. TV3 goes to air.

1990

Prince Edward opens the XIVth Commonwealth Games in Auckland. Dame Catherine Tizard appointed Governor-General. Earthquake in Hawke's Bay, 6.5 on the Richter Scale. One- and two-cent coins no longer legal tender. Telecom sold for \$4.25 million. Geoffrey Palmer resigns as Prime Minister and is replaced by Mike Moore. NZ yachts finish first and second in Whitbread Round the World Race. General election and National Party has landslide victory with 37 seat majority; Jim Bolger is Prime Minister. David Gray shoots and kills 13 people in Aramoana, before being killed by the police.

1991

NZ sends a contingent of 111 from the armed forces to the Gulf. Thousands of NZ's demonstrate in protest to the Employment Contracts Bill. The Consumers Price Index has the lowest quarterly increase for 25 years (0.1 per cent). Finance Minister Ruth Richardson announces further welfare cuts. *Auckland Star* closes down after 121 years. Entertainer Billy T James dies. Number of unemployed exceeds 200,000 for the first time. An avalanche on Mt Cook reduces its height by 10.5 m. NZ is defeated by the ultimate tournament winners, Australia, in a World Rugby Cup semi-final.

1992

NZ and Australia successfully host the World Cricket Cup and the NZ team surprises by reaching the semi-finals, losing to Pakistan, the eventual tournament winners. The year begins with murders at the rate of one a day which sparks national debate. The National Government narrowly holds the Tamaki seat from the newly formed Alliance Party in a by-election resulting from the resignation in 1991 of Sir Robert Muldoon. The nation is shocked by two multiple murders within families, one in South Auckland and one in Masterton. In San Diego, California, NZ is beaten in the sail-off against Italy for the right to challenge the US for the America's Cup. The government makes the first moves towards a new public health system, based more on user-pays.

1993

19 people die in rail-crossing accidents. Department of Labour figures show frozen wages for 54 per cent of workers. Tough anti-drink driving laws, including compulsory breath-testing and random stopping, introduced. Jane Campion becomes first female director to win best film prize (jointly) at Cannes for *The Piano*. Dame Silvia Cartwright becomes NZ's first female High Court judge. Winston Peters launches NZ First Party. An American consortium buys NZ Rail for \$400 million. Colin McCahon painting fetches \$460,000, the highest price for a NZ work of art. The General Election gives National 49 seats, Labour 46, and the Alliance and NZ First win two seats each, with no party having an absolute majority. Mixed Member Proportional (MMP) representation wins the electoral referendum. Helen Clark replaces Mike Moore as leader of Labour Party.

1994

Auckland faces water crisis with lowest rainfall for 36 years. US gives assurance that warships visiting NZ will not be nuclear-armed. NZ share market reaches highest level since 1987 crash. The country's two largest meatworks close their doors with the loss of 4,300 jobs. Peter Blake and Robert Knox-Johnston win Jules Verne Trophy sailing round the world in 74 days and 22 hours to break 10 world records, while *NZ Endeavour*, skippered by Grant Dalton wins Whitbread Round the World Race. The budget shows its first surplus for 17 years. Biggest housing boom for a decade. NZ Rail's fast ferry makes first crossing of Cook Strait in 90 minutes (half the conventional time). Tainui Maori accept Crown's \$170 million offer to settle Treaty of Waitangi claims. Jim Anderton resigns as leader of Alliance (only to make a comeback six months later). New parties, such as ACT and ROC, formed in preparation for first MMP election.

1995

Maori groups overwhelmingly reject government's fiscal envelope proposal for a \$1 billion cap on Treaty of Waitangi claims. Waitangi Day proceedings are abandoned for the first time ever following disruptions. Number of Maori land occupations around the

country. Landmark visit of PM Jim Bolger to US and meeting with President Clinton. Auditor-General Jeff Chapman charged with fraud. Team NZ's 'Black Magic' boat wins America's Cup, but All Blacks lose the World Cup to the Springboks. 14 die in West Coast Cave Creek disaster when a Department of Conservation viewing platform collapses. Ansett Dash-8 on a commercial domestic flight crashed near Palmerston North, killing four. MPs defected from both National and Labour parties in a bid for survival as the first MMP elections loomed and the number of electorates was reduced. Members unlikely to gain selection for electorates sought the middle ground with parties they thought would be influential in MMP coalitions.

COAST TO COAST

A comprehensive multimedia guide to New Zealand, *Coast to Coast* is a unique combination of two best-sellers: The Mobil New Zealand Travel Guides and the video *Coast to Coast* from New Zealand Video Tours.

The CD-ROM features:

- Over 4,500 topics
- 1030 superb photographs
- 53 text-linked maps
- New Zealand history
- Maori folklore
- 32 minutes of great video footage

Described by the Sunday Times in the UK as “**probably the best guide books to anywhere ever written**” the full text from the North and South Island *Mobil New Zealand Travel Guides* by Diana and Jeremy Pope is included. The detailed text-linked maps make it easy to travel from Cape Reinga to Bluff and learn about the whole country without having to leave your PC.

Coast to Coast provides unparalleled coverage of where to go and what to do right throughout New Zealand.

GORDON MCLAUCHLAN

Gordon McLauchlan, one of New Zealand's best known writers and broadcasters, was born in Dunedin, educated at various primary schools and at Wellington College, Wellington.

He worked on a number of country and provincial newspapers before becoming a special writer for Wilson and Horton Ltd, publishers of the *New Zealand Herald*, the country's largest daily. He is now books editor of the *New Zealand Herald*, and he writes a weekly column for the *Herald* called "The Way We Are", which is syndicated to other newspapers. He also writes a beer column for Auckland's monthly *Metro* magazine.

His specific areas of interest are the historical, social and political life of New Zealanders; New Zealand literature, agriculture, tourism and media. He has been a Frank Sargeson Trust board member for several years, was for two years (1995-96) president of the New Zealand Society of Authors, and was the founding president of the Travel Communicators of New Zealand.

Books: *The Passionless People*, a best-selling social commentary on New Zealanders (1975); *The Farming of New Zealand*, a history of NZ agriculture (1981); *The Acid Test*, an anthology of NZ humour (1984, revised 1987, 1991, revised and expanded 1995); *A History of New Zealand Humour* (1988); *The Big Con* (1992), a political commentary; *The Story of New Zealand Beer* (1995).

McLauchlan has hosted two New Zealand television magazine shows. He was presenter of a six-part documentary series on the United States called "American Pie" (1987), the same year he was named "Presenter of the Year" for his live, weekly 90-minute magazine programme, "Weekend".

Everything I have tried hasn't fixed my problem!

HELP - ANNOTATIONS

{ewc MVIMG, MVIMAGE, !bannotat.dib}

Adding an annotation

Click on the annotation symbol (at the bottom of your screen) to add your own notes to the topic currently displayed. The annotation marker {ewc MVIMG, MVIMAGE, !ptannot.bmp} will appear in the title area of any topic where an annotation has been made.

Accessing annotations

To view your annotations, click on the annotation symbol or on the annotation marker that appears in the annotated topics.

Helpful Hints:

Press F1 at any dialog box for further help information

Click your right mouse button for access to a menu of helpful features

HELP - BOOKMARKS

{ewc MVIMG, MVIMAGE, !bookmark.dib}

Adding bookmarks

Click on the bookmark symbol (at the bottom of your screen) to place a bookmark in the topic displayed.

Locating bookmarks

Click on the bookmark symbol at any time to locate and move to any topic marked with a bookmark.

Helpful Hints:

Press F1 at any dialog box for further help information

Click your right mouse button for access to a menu of helpful features

HELP - COPYING

{ewc MVIMG, MVIMAGE, !bcopy.dib}

Copying text from a topic to a document in a word processing application

Click on the copy symbol (at the bottom of your screen) to copy the current topic to the clipboard. Then use the paste option within your word processor. You can also press the Control-C key or use the right mouse button to copy a topic.

Copying photographs to another Windows application

Right mouse click on the photograph you wish to copy. Select copy image or copy photograph from the popup menu. Paste the copied photograph to your application. The best quality image will be obtained by copying the enlarged fullscreen photograph.

The standard Microsoft® Windows™ instructions for copying and pasting apply within this product.

Helpful Hints:

Press F1 at any dialog box for further help information

Click your right mouse button for access to a menu of helpful features

HELP - ILLUSTRATIONS

Topic Illustrations

A small image of a topic's first illustration is displayed between the topic title and the first paragraph of text for each illustrated topic.

Illustrations may be viewed in three (3) different sizes

Click on the small image to go to a gallery of illustrations for the topic (if there is only one illustration you will taken immediately to the medium sized image). From this gallery, you may view images individually at a medium size and at a full screen size. Click on the small image to display the same image at the medium size with a descriptive caption. Click on the medium size image to view the image full screen.

See also [Photo Galleries](#)

Helpful Hints:

Press F1 at any dialog box for further help information

Click your right mouse button for access to a menu of helpful features

HELP - GALLERIES

{ewc MVIMG, MVIMAGE, !bgalls.dib}

There are three main galleries in the product:

[Photos](#)

[Sounds](#)

[Videos](#)

These are all accessible from the Gallery symbol. A popup menu will appear when the gallery symbol is clicked.

Helpful Hints:

Press F1 at any dialog box for further help information

Click your right mouse button for access to a menu of helpful features

HELP - PHOTO GALLERY

{ewc MVIMG, MVIMAGE, !bgalls.dib}

There are two photo galleries in the product. **The main photo gallery** is accessed by clicking on the Gallery Icon and selecting "Photos" from the popup menu. This gallery is comprised of all the photos for topics which have a title beginning with a specific letter. Browse through the main photo gallery by selecting a letter from A to Z at the top of the screen.

At any time you may choose to view the gallery photographs individually at a medium size or full screen. Click on a small image to view it at the medium size. Click on the medium size image to view the image full screen.

The second gallery is specific to each topic. Many topics are illustrated with one image. However, some topics have as many as 30 illustrations. The gallery for each topic is accessed by clicking on the small image appearing at the top of each illustrated topic.

Helpful Hints:

Press F1 at any dialog box for further help information

Click your right mouse button for access to a menu of helpful features

HELP - SOUND GALLERY

{ewc MVIMG, MVIMAGE, !bgalls.dib}

There are two sound galleries. **The main sound gallery** is accessed by clicking on the Gallery Icon and selecting Sounds from the popup menu. This gallery is comprised of all the sound clips for topics which have a title beginning with a specific letter.

{ewc MVIMG, MVIMAGE, !cassette.dib}

Browse through the main sounds gallery by selecting a letter from A to Z at the top of the screen. A cassette icon represents each sound clip. Click on the cassette to display a slider with a caption identifying the sound. Click on the play button on the slider to play the sound.

The second gallery is specific to each topic. The sound gallery for each topic is accessed by clicking on the cassette icon appearing at the top of any topic illustrated with sound.

Helpful Hints:

Press F1 at any dialog box for further help information

Click your right mouse button for access to a menu of helpful features

HELP - VIDEO GALLERY

{ewc MVIMG, MVIMAGE, !bgalls.dib}

There are two video galleries. **The main video gallery** is accessed by clicking on the Gallery Icon and selecting Videos from the popup menu. This gallery is comprised of all the video clips for topics which have a title beginning with a specific letter.

Browse through the main video gallery by selecting a letter from A to Z at the top of the screen. A video camera icon represents each video. A caption appears beneath each video camera identifying the video. Click on the video camera to play the video.

{ewc MVIMG, MVIMAGE, !videocam.dib}

The second gallery is specific to each topic. The gallery for each topic illustrated with video is accessed by clicking on the video camera icon appearing at the top of the topic.

Helpful Hints:

Press F1 at any dialog box for further help information

Click your right mouse button for access to a menu of helpful features

HELP - KEY TO ICONS AND SYMBOLS

{ewc MVIMG, MVIMAGE, !bglobal.dib}

Access a menu listing: Introduction; Contents; Timeline; About; Credits; Settings; Print Setup; Auto Advance; Help; and Exit. You may customise the appearance and optimise the performance of the title by changing the Settings.

{ewc MVIMG, MVIMAGE, !bmaps.dib}

Access the maps of New Zealand

{ewc MVIMG, MVIMAGE, !bgalls.dib}

Access the main galleries for Videos, Photos, and Sounds

{ewc MVIMG, MVIMAGE, !bindex.dib}

Access the alphabetical index of topics

{ewc MVIMG, MVIMAGE, !bsearch.dib}

Access the search menu: Text Search; Last Search Goto Next; Keywords and History. Search for specific text or search for pre-defined Keywords. History records the places you have visited in the current session - quickly return to any screen by double-clicking on the name.

{ewc MVIMG, MVIMAGE, !bannotat.dib}

Add or find your own notes to topics

{ewc MVIMG, MVIMAGE, !bbookmk.dib}

Create or find a bookmark

{ewc MVIMG, MVIMAGE, !bcopy.dib}

Copy text, maps or illustrations to another Windows application

{ewc MVIMG, MVIMAGE, !bprint.dib}

Print topics, maps or illustrations

{ewc MVIMG, MVIMAGE, !bback.dib}

Go back to the previously displayed screen

{ewc MVIMG, MVIMAGE, !bprev.dib}

Display the previous topic in the browse order.

{ewc MVIMG, MVIMAGE, !bnext.dib}

Display the next topic in the browse order

{ewc MVIMG, MVIMAGE, !bhelp.dib}

Display the help information

Helpful Hints:

Press F1 at any dialog box for further help information

Click your right mouse button for access to a menu of helpful features

HELP - MAPS

{ewc MVIMG, MVIMAGE, !bmaps.dib}

Click on the Map icon to browse through the maps of New Zealand. You can navigate from map to map using the compass that appears on the right hand side of your screen or by clicking on any portion of the representative images of the North and South Islands to the right of the screen.

Maps are hot-linked to topics in the product. The mouse cursor will turn into a hand when passed over a “hotspot”. Click on the hotspot to go directly to the topic.

In instances where a topic title is a placename, a map icon will usually appear at the top of the topic between the topic title and the first paragraph of the text. Click on this “mini-map” to view the relevant map for the topic.

Helpful Hints:

Press F1 at any dialog box for further help information

Click your right mouse button for access to a menu of helpful features

HELP - PERFORMANCE ISSUES

If your computer is not performing as well as you would like, close down other applications you do not need running.

If performance is still not acceptable, there are a number of settings which may be changed to improve the speed.

{ewc MVIMG, MVIMAGE, !bglobal.dib}

Click on the Global icon and select **Settings** from the menu. You will see that there are a number of settings which may be changed to improve the speed of your computer while running this product (for example the transparent window setting). These settings may be altered at any time.

Helpful Hints:

Press F1 at any dialog box for further help information

Click your right mouse button for access to a menu of helpful features

HELP - PRINTING

{ewc MVIMG, MVIMAGE, !bprint.dib}

To print out the text of a topic or an illustration, click on the Print icon at the bottom of the screen.

Helpful Hints:

Press F1 at any dialog box for further help information

Click your right mouse button for access to a menu of helpful features

HELP - SOUNDS

{ewc MVIMG, MVIMAGE, !cassette.dib}

How Do I Play Sounds?

Click on the cassette icon. A slider will appear with a sound caption beneath it. To play the sound, click on the Play button on the slider.

I Can't Hear the Sound Clips!

Check your speakers are switched on and the volume is not turned down.

Check the Mixer application associated with your sound card - is a volume control slider turned down that should be turned up?

Check you have the correct sound card driver installed?

Check if you can hear sound files on other multimedia applications. If you can hear sound files on other multimedia applications but not on this product, please contact ProTech technical support for assistance.

How Do I Stop the Mouse Click Sounds?

Click on the Global icon and select **Settings** from the menu. To silence the mouse click sounds remove the check against the "Click Sounds" prompt.

Helpful Hints:

Press F1 at any dialog box for further help information

Click your right mouse button for access to a menu of helpful features

HELP - VIDEOS

{ewc MVIMG, MVIMAGE, !videocam.dib}

How Do I Play Videos?

Windows 95 version: Use (click on) the controls displayed beneath the television set on the VCR panel to play, stop, and rewind etc. The control to close the video is marked "off" and coloured. If you select full screen video the video will fill the whole screen. In this mode the keyboard can be used to control the video playback. You can press the ESC key to return to the normal video window from the full screen mode. You can also press "O" to turn the video off, "S" to stop the video, "P" to play the video and "R" to rewind the video.

Windows 3.x version. The video will appear embedded in a window with a slider type control bar beneath the window. You can start, stop and rewind the video.

The Videos Won't Play!

Windows 95 version: Have you installed ActiveMovie? See the installation instructions on the product packaging.

Windows 3.x version: Have you installed Video for Windows? See the installation instructions on the product packaging.

Helpful Hints:

Press F1 at any dialog box for further help information

Click your right mouse button for access to a menu of helpful features

HELP - SEARCHING

How do I find a topic?

You may find topics in several ways:

{ewc MVIMG, MVIMAGE, !bindex.dib}

Click on the Index Icon and select the letter between A and Z which will take you to the right index for the topic; Scroll down that index until you find the topic name. Click on the topic title to move to the topic.

{ewc MVIMG, MVIMAGE, !bsearch.dib}

Click on the Search icon and use the Keywords feature to list a range of topics relating to a key word. Double click on the title of the topic you wish to view.

Click on the Search icon and enter the relevant text to perform a full text search of the product. When the list of matches appears, click on the title of the topic you wish to view.

How do I find a place?

You may search for places in the same way you search for any other topic (see above).

{ewc MVIMG, MVIMAGE, !bmaps.dib}

Alternatively, you may use the maps to locate the places you wish to find. Click on the map icon and use the mini-maps of the North and South Island or the compass to move from one map to another.

Many places shown on the maps are linked to relevant textual topics.

You may also move from a text topic (where the topic title is a placename) to the relevant map for that place by clicking on the compressed map image that appears beneath the topic title and above the first paragraph of the text.

HELP - FINDING MY WAY AROUND

How do I get back to the main Contents screen?

Click on the top left corner of the screen

How do I get to the Alphabetical Index?

{ewc MVIMG, MVIMAGE, !bindex.dib}

Click on the Index icon

How do I move to the next topic?

{ewc MVIMG, MVIMAGE, !bnext.dib}

Click on the Next icon at the bottom of the screen

How do I move to the previous topic?

{ewc MVIMG, MVIMAGE, !bprev.dib}

Click on the Previous icon at the bottom of the screen

How do I go back to the last screen I was in?

{ewc MVIMG, MVIMAGE, !back.dib}

Click on the Back icon at the bottom of the screen

See Also [Key to Icons and Symbols](#)

Helpful Hints:

Press F1 at any dialog box for further help information

Click your right mouse button for access to a menu of helpful features

HELP - TEXT SETTINGS

{ewc MVIMG, MVIMAGE, !bglobal.dib}

I find the text hard to read

You can change the settings for the text to suit your own preferences. Click on the Global icon and select **Settings**. You may alter the zoom factor of the text from 25% to 200% at any time. You may also switch off the transparent graphical background behind the text and the illustrations.

Helpful Hints:

Press F1 at any dialog box for further help information

Click your right mouse button for access to a menu of helpful features

PROTECH INTERNATIONAL LTD

polyMedia is the name and mark identifying and distinguishing products developed or published by ProTech International Ltd.

ProTech International Ltd was established in December 1992. In 1993 ProTech released New Zealand's first multimedia consumer title on CD-ROM thereby establishing itself at the forefront of the country's fledgling multimedia industry. The Company has since released a number of highly acclaimed multimedia titles including New Zealand's best-selling home-grown CD-ROM the *TVNZ New Zealand Encyclopedia* which was awarded Best New Zealand Software by the readers of *PC World* magazine in 1995.

In addition to developing its own suite of multimedia products, ProTech offers a complete range of leading-edge multimedia technology services to national and international clients. These services include software architecture and design, graphic design, multimedia programming, and digital video encoding. ProTech also creates CD-ROM, VideoCD, CDI, CD Plus and enhanced VideoCD products.

ProTech has a dedicated section on Compuserve within the CD-ROM Vendors A forum (GO PROTECH) for product support and new product announcements.

The relevant searches have been undertaken and the legal procedures for registering polyMedia as an official trademark of ProTech International Ltd have been initiated.

For further information about ProTech International Ltd, we may be contacted at:

P O Box 324
NELSON 7015
New Zealand

TELEVISION NEW ZEALAND LTD

Te Reo Tātaki

TVNZ is a commercially successful broadcaster operating two nationwide, advertising-supported, free-to-air TV networks serving a very wide range of viewers by offering complementary schedules. The two networks screen the best of New Zealand-made and international entertainment, sport, children's, drama, documentary, news and current affairs programmes. TVNZ also operates a group of regional advertiser-funded TV stations which offer regional information programmes and international product. TVNZ plays a leading role in the community in acceptance of its role as a major national media organisation.

HISTORY OF TVNZ

June 1960	New Zealand Broadcasting Service begins transmitting on one channel from Auckland for two hours per night, two nights per week.
August 1960	Television licence fee of four pounds is introduced.
October 1960	Transmission extended to five nights per week.
April 1961	Television advertising introduced. Transmission is extended to 28 hours per week.
June 1961	Transmission begins in Christchurch.
July 1961	Transmission begins in Wellington.
July 1962	Transmission begins in Dunedin. New Zealand Broadcasting Corporation (NZBC) created.
1964	Transmission extended to 50 hours per week.
1968	A combined radio and television fee is introduced.
1969	Permanent national network link up is established.
1970	New Zealand Broadcasting Authority inquiry about the need for a second channel. Transmission hours extended to 65 hours per week.
1971	Warkworth satellite station opens. Conversion to PAL colour system begins.
1972	The new Labour Government awards the warrant for a second channel to the NZBC.
October 1973	Colour television is officially introduced. Transmission hours reduced to conserve energy.
March 1975	The television centre at Avalon, Lower Hutt is opened.
April 1975	NZBC dissolved and replaced by Television One, Television Two and Radio New Zealand.

- June 1975 Television Two opens in Auckland and Christchurch.
- June 1976 Television Two becomes known as South Pacific Television.
- 1979 Television sets in 95% of New Zealand homes.
- 1980 TV One and TV Two merge under a single corporation - Broadcasting Corporation of New Zealand.
- 1988 BCNZ is disestablished into separate State Owned Enterprises. Its largest division, Television New Zealand becoming TVNZ Ltd, an autonomous commercial television company.
- TVNZ Pacific Service is established to provide programming to Pacific Island countries.
- 1989 New Broadcasting Act deregulates the New Zealand market and opens up the sale of UHF television frequencies to private enterprise. This Act allows commercials on Sundays after midday, and sees the commencement of NZ On Air and the Broadcasting Standards Authority.
- The Television Centre in Auckland is opened by Her Majesty The Queen.
- TVNZ takes a 35% stake in pay TV operator, Sky Network Television.
- Network Two is given a new image and is renamed Channel 2.
- 1990 PeopleMeters rating system introduced.
- TVNZ takes a 25% stake in a consortium of leading companies to establish Clear Communications Limited.
- Sky Network Television goes to air in Auckland with three subscription channels - Sports, News, Movies - distributed by BCL via wireless UHF.
- 1991 The National Government allows 100% foreign ownership of TV and radio.
- TVNZ reduces stake in Sky Network Television to 16.3%.

- 1992 Liquor advertisements are seen on television for the first time.
- eTV launches Television Learning with the Auckland Institute of technology.
- 1993 eTV increases its hours from 2.5 hours per week to 6 hours and doubles its audience.
- TVNZ Pacific Service extends its service to Western Samoa, taking to six the number of customers.
- TVNZ launches Asia Business News (ABN) in Singapore with US media companies, Dow Jones and Telecommunications Inc.
- 1994 Channel 2 goes to air 24 hours, seven days a week.
- Sky Network Television adds another two channels - Discovery and Orange.
- TVNZ subsidiary BCL is the first broadcast and telecommunications company in Australasia to be certified with the internationally recognised ISO 9001 quality standard.
- March 1995 Horizon Pacific Television Limited (HPTV) established and launches four regional television stations in Auckland, Wellington, Hamilton and Dunedin.
- May 1995 TVNZ initiates the Red Socks campaign to help bring the America's Cup to New Zealand.
- June 1995 TVNZ sells its 29.5 percent share in the Asia Business News (ABN).
- Launch of global satellite network with Channel 9, Australia.
- November 1995 HPTV purchases CTV in Christchurch.
- 1996 TVNZ's world wide web site is launched, attracting up to 20,000 hits per day in its first six months.

The Maori name for TVNZ, "Te Reo Tatāki", means 'the challenging sounds and images'.

TVNZ OPERATING DIVISIONS

TVNZ TELEVISION

TVNZ's two national free-to-air channels, TV ONE and TV2, broadcast 24 hours a day, seven days a week. The programming, sales and marketing, news, sport and Maori programmes departments for the two channels are based at the Television Centre in Auckland, with offices throughout New Zealand.

Horizon Pacific Television's regional stations are located in Auckland, Hamilton, Wellington, Christchurch and Dunedin.

eTV is TVNZ's educational television service, broadcasting on TV ONE for around two hours each morning.

TVNZ PRODUCTION

TVNZ's production facilities are based in four centres. Drama is produced by South Pacific Pictures in Auckland; children's programmes in Christchurch; and natural history in Dunedin; and a variety of magazine and lifestyle shows at Lower Hutt's Avalon Studios.

Specialist areas such as the New Zealand Television Archive and the outside broadcast unit, Moving Pictures, are also part of this division.

TVNZ DISTRIBUTION

BCL is TVNZ's signal distribution company, providing transmission services to all New Zealand's TV broadcasters, most radio stations and a number of other clients.

Satellite Services runs an international programme delivery satellite network and the Pacific Service supplies programming to Pacific Island countries.

TVNZ GROUP

A small corporate office in Auckland provides financial, human resources, planning and legal services to the whole group of companies.

Together We're ONE

TV ONE is the most popular TV channel in New Zealand. The ten top programmes of the first six months of 1996 all appeared on TV ONE. It's the country's leader for news, sport, current affairs and information programmes, and it also plays top New Zealand, British and Australian dramas and comedies.

TV ONE is on air 24 hours, seven days a week, broadcasting in stereo.

TV ONE appeals to a broad audience.

2 Too Cool

TV2 attracts a slightly younger audience than TV ONE with a top-rating mix of comedies, dramas and TV specials from New Zealand, the US and Australia. All the top movies of 1995 screened on TV2. It's the home of New Zealand's top drama *Shortland Street* which plays every weeknight at 7.00pm.

TV2 is New Zealand's second highest rating channel, just behind TV ONE. It also broadcasts in stereo 24 hours a day, seven days a week.

AVALON STUDIOS

Avalon Studios Ltd is New Zealand's leading single production centre for television, having been built in 1975.

All aspects of television are catered for at Avalon Studios and its customers include TVNZ and many international production companies.

The main activities include:

KOTUKU PRODUCTIONS

is the production nerve centre of Avalon Studios, the creative source which has given rise to some of New Zealand television's most successful programmes, including *Fair Go*, *Crimewatch*, *Country Calendar*, *Agritech 2000*, *Good Morning*, and *Air New Zealand Holiday*.

Operating in much the same way as an independent production company, Kotuku's core staff have extensive background in all aspects of television production and management.

The Kotuku team originates and/or develops concepts, seeks approval from broadcasters and subsequent funding from NZ On Air, as well as from other commercial sources as appropriate. The Kotuku team therefore includes specialist marketing executives, and has the ability to put together skilled project teams at short notice.

Productions span a wide range of subjects and styles, from studio-based entertainment specials, pre-recorded and packaged health and education series, lifestyle programmes, Inflight entertainment, tourism and consumer shows to dramas, documentaries, sitcoms and feature films.

The flexibility of Kotuku is such that it can manage production challenges from one-day projects through to extended production shoots involving several New Zealand or overseas locations. Co-production, in association with other established programme makers either from New Zealand or overseas, is another specialist capability.

While the company is proud to continue with its popular stable of productions, Kotuku is always keen to explore new areas of expansion, and is currently investigating interactive children's programmes, and new tourism shows.

ENVISAGE

provides studios, field crews and design for television and film productions, corporate video and television commercial work. Programmes range from *Telebingo* and *Fair Go* through to live events such as the *Election Special* and *Tourism Awards*. Crews are provided for location shoots and outside broadcasts. Envisage also has a thriving

business in event management, ranging from design and set construction through to scripting presenters and choreography of performers.

PLANET GO

is a team of designers and computer programmers specialising in interactive design in 3D realtime graphics for a range of electronic media. These include award winning websites and weather presentation packages, kiosks, CDRoms, computer-based training packages and marketing tools like real time advertising. With its origins in the television industry, Planet Go is best placed to ensure that new media communications designed specifically for the active screen are involving and tell a good story.

THE FILM UNIT

is responsible for laboratory processing of 16 and 35mm film used in TV productions, feature films and TV commercials. It also carries out full sound post-production work with two Dolby stereo mixing suites. The Film Unit can provide six hour turnaround for rushes and transmit these via satellite to film companies around the world.

It also carries out full sound post-production work with two Dolby stereo mixing suites and with the recent purchase of an Otair Premiere mixing desk, this is the only sound facility in New Zealand capable of six track digital output.

FITTING IMAGES

produces corporate and communications videos and television commercials. They are a specialist of producers, writers and directors who deal directly with corporate and agency clients. Fitting Images also manages the Lotto Draw for the New Zealand Lotteries Commission.

ORIGIN TV

is a television origination service that puts the programmes to air for TV ONE. This involves editing overseas material and coordinating all on-air material including videotape, live-to-air feeds and commercials. Origin also originates the *Trackside* programme for TAB and four pay television channels for First Media (Telecom).

GO POST

is an electronic post-production business which edits raw footage into the finished ready-to-air product. The business has a mix of on and off-line edit suites, sound post-production, computer graphics and special effects capabilities. Go Post production also has a telecine machine for converting film to tape. Go Post has a Quantel digital editing facility.

BROADCAST COMMUNICATIONS LIMITED (BCL)

BCL is a signal distribution company, providing transmission services to New Zealand's television companies and most AM and FM radio stations. Despite New Zealand's huge range of geographic and climatic conditions, BCL's 500-site transmission network provides virtually 100 percent coverage of the country for TV ONE and TV2.

BCL also operates the Maritime Operations Centre in Wellington for the Maritime Safety Authority.

BCL Australia provides engineering services to the National Transmission Agency in Australia, which manages the design, construction and maintenance of the ABC and SBS networks.

BCL's work in Asia includes consultancy services for a large-scale wireless telephone service in Malaysia; a GSM digital cellphone network in the Philippines; analogue cellular in Indonesia and broadcast transmission in Fiji.

BCL is divided into two major business units, Design & Build and Networks. The ISO 9001-certified company is a wholly owned subsidiary of TVNZ.

CHILDREN'S PROGRAMMES

TVNZ's children's programmes are produced by the Children's Programmes unit based in Christchurch. Over 200 hours of television come out of the children's unit per year, catering for an audience from pre-schoolers to 12 year olds.

Pre-school show *Chatterbox* and the long-running *Son of a Gunn* came out of Studio 4 in Christchurch and *What Now?* continues to be produced there.

New series for 1996 include *Get Real* - an environmentally based magazine programme shot entirely on locations throughout New Zealand. *Get Real* is made by young people for young people.

Another new series for 1996 is *Mai Time* which is a popular entertainment series promoting youth culture and music.

Phone: 64 3 3792680. Fax: 64 3 3718222

COMMUNITY SUPPORT

Each year TVNZ commits a substantial amount of free airtime to Community Support. This enables charitable organisations to communicate their message in a powerful way to a vast audience through television advertising. Community Support messages can be used to promote awareness of a cause or to ask for donations.

The purpose of Community Support is to help those organisations in the community that are working hard to make a difference in people's lives. As the leading public broadcaster, TVNZ can reach a larger audience than any other medium.

Community Support is run through an annual application process which allows TVNZ to plan the year ahead and work towards scheduling airtime at the time that best suits the organisation. Airtime can be scheduled in a block over an appeal period or intermittently, depending on the community organisation's requirements. Community Support messages are scheduled on both TV ONE and TV2.

To be eligible for Community Support, organisations must be non-profit making and have official status. Their work must be apolitical and related to health, the environment or education. Organisations must be able to demonstrate that they will make a significant contribution to the New Zealand community.

eTV

eTV - TVNZ Education Television - broadcasts a range of quality educational programmes within the morning schedule on TV ONE.

Most of the programmes are targeted at the lifelong learning needs of the adult audience and the service is not designed as Schools Broadcasting.

However many of the programmes also have relevance to the school curricula and the teacher professional development. eTV also works with the Ministry of Education and a number of public sector agencies to develop educational projects.

TV Open Learning is used to describe the tertiary-level distance learning courses using television which are incorporated within eTV and offered in conjunction with tertiary institutions.

In 1997 Auckland Institute of Technology will offer courses in Marketing and Management, Child Development, Statistics and language programmes in Modern Standard Chinese, Spanish and French.

The University of Waikato offered courses in Maori language and Global Economics.

Further options for TV Open Learning courses are constantly under evaluation.

eTV plans its week-day programme schedule on daily themes, so that Monday focuses on business and Asia; Tuesday on education, environmental and social issues; Wednesday on themes of self-development and relationships; Thursday on science and technology; and Friday on culture and humanities.

On Sundays, New Zealand On Air funds two series produced for eTV: *Asia Dynamic* focuses on the lives and culture of New Zealanders of Asian descent and eTV also screens a series of programmes produced for the *4 in 10* New Zealanders who suffer some disability.

eTV is for everyone interested in expanding their range of interests or improving their qualifications.

HORIZON PACIFIC TELEVISION

Horizon Pacific's regional television stations in Auckland, Waikato/Bay of Plenty, Wellington and Dunedin went to air in March 1995. [In November 1995, Christchurch's CTV also joined the group.]

Already they have attracted a high profile for their coverage of local news and issues and their high quality dramas, documentaries and specials.

This year the stations have further expanded their news coverage with a half hour bulletin at 5.30pm dedicated entirely to local coverage. *BBC World News* screens at 6pm, followed by *One Network News*. The local bulletin is then updated and repeated at 7pm.

The stations broadcast similar schedules but are not networked together.

ATV, Coast to Coast, Capital City, CTV and Southern TV each have their own news and sales teams and small production crews. Programme buying and national sales and marketing are coordinated from Horizon Pacific, the parent company, in Auckland.

Horizon Pacific is 100%-owned by TVNZ.

INTERNATIONAL SALES

Not a division of TVNZ, HIT Entertainment is, in fact, the company' international programme distributor. Based in London, HIT markets TVNZ's programmes to TV telecasters around the world and works with TVNZ production units to secure co-production partners.

In 1995 sales of TVNZ programmes were made to over 80 countries, including major markets such as the USA, UK, Germany, Italy and France. The most successful programmes internationally continue to be TVNZ Natural History's *Wild South* films and the extensive catalogue of children's drama produced by TVNZ and South Pacific Pictures.

LIFESTYLE UNIT

TVNZ's Lifestyle Unit produces TV ONE's popular lifestyle magazine shows *Maggie's Garden Show* and *Town And Country*.

Presented by Maggie Barry, *Maggie's Garden Show* is now in its fifth year on screen. For the first time this year, the show has an uninterrupted 44-week run, instead of the usual two series of 11 episodes each. The show rates consistently high.

The first series of *Town And Country* screened earlier this year to ratings success and excellent viewer feedback. In 1997 there will be two series of *Town And Country*. The hour-long show replaced and expanded upon the Lifestyle Unit's half hour *Open Home* programme, which had a successful four year run, prior to *Town and Country*. The presenters of *Town and Country* are Jude Dobson, Jim Hickey, Dave Cull And Ngaire Coley.

As well as making *Maggie's Garden Show* and *Town And Country*, the Lifestyle Unit also produces re-packaged garden shows for an American Home And Garden Cable Network called HGTV.

The unit has also recently made the NZ On Air-funded documentary *A Summer Place*, about the past, present and future of the classic Kiwi bach which will screen later in 1996. The presenter is Maggie Barry.

The Lifestyle Unit's output is likely to increase significantly in 1997. The Executive Producer of the unit is Irene Gardiner, who also looks after TVNZ's in-house entertainment unit.

MAORI PROGRAMMES

Maori Programmes has developed a strong reputation for the quality and durability of its core weekly programmes:

- *Waka Huia*, which records Maori elders telling their own stories in Maori;
- *Marae*, a Maori issues magazine programme; and
- *Tagata Pasifika*, a Pacific cultures magazine show.

All screen on Sunday mornings on TV ONE.

The department also produces the nightly news programme *Te Karere*, and this year, youth show *Mai Time*.

MOVING PICTURES

Moving Pictures is the outside broadcast unit of TVNZ. It provides live coverage of sports and major events for all New Zealand's TV broadcasters, using its fleet of production vehicles equipped with cameras, link equipment and mobile studios.

Moving Pictures is also called in by overseas TV companies when they need live pictures sent from New Zealand. With the development of compact, light, easily transported outside broadcast vans, Moving Pictures will also increasingly be able to offer OB facilities to international broadcasters in their own markets.

NEW ZEALAND TELEVISION ARCHIVE

The New Zealand Television Archive is the largest repository of moving images in New Zealand. For over 30 years, since the beginning of television broadcasting in this country, TVNZ has collected and preserved its documentaries, news, current affairs, entertainment and drama programmes. It also holds the National Film Unit collection which recorded New Zealand's history and progress from 1940-1972, as well as independently produced television programmes. Most locally produced programmes screened on New Zealand television are in the New Zealand Television Archive.

The New Zealand Television Archive is the custodian of TVNZ's intellectual property and has a comprehensive understanding of copyright and ownership issues. Material is released to the customer under licence.

New Zealand Television Archive's state of the art computer-based archiving management system has the ability to easily and readily research, locate and supply specifically requested items.

There is a wide variety of footage supplied to its clients, being advertising agencies and production companies, both in New Zealand and overseas as well as servicing TVNZ's internal departments like News and Sport. They also provide a service to corporate clients and members of the public who require News and Current Affairs items or programmes of interest to them.

Television Music, the extensively resourced music library within TVNZ also forms part of the New Zealand Television Archive services. Television Music supply the needs of TVNZ's producers wanting music to build into their productions and can select from a variety of commercial and production music, ranging from rare and hard to find New Zealand pop albums to the latest sound effects.

Organisations should contact the New Zealand Television Archive for a copy of its promotional booklet and showreel.

NEWS & CURRENT AFFAIRS

News & Current Affairs produces a large range of news and current affairs programming, including the nightly *ONE Network News* at 6.00pm, which regularly tops the ratings every week of the year. [In international terms it is unusual for news programmes to head the ratings like this or for one TV news service to maintain such clear leadership over its rivals.] There are two other editions of *ONE Network News* - *Midday* and *Tonight* at 9.40pm

The department also produces the nightly *Holmes*, weekly investigative programme *Assignment*, current affairs programme *60 Minutes*, sports news show *Sportsnight*, and current affairs programme *Meet the Press*.

TVNZ NATURAL HISTORY

Over the past 15 years TVNZ Natural History has grown to become one of the largest and most successful commercial producers of natural history in the world.

Their commitment is to films of world class quality. Our scope has expanded beyond New Zealand to encompass the entire Pacific Rim, Australasia, Asia, Antarctica, and across the South Pacific to South America.

As the top natural history production house in the southern hemisphere, TVNZ Natural History produce blue-chip one hour documentaries, as well as series such as *Deep Blue*, stories of adventure and diving in the South Pacific.

TVNZ Natural History underwater work is second to none, and the expertise of their divers is supported by their own purpose-built remote operated vehicle which can film at depths greater than 2000 feet (600 metres).

The natural history research and development department designs and builds the equipment to put film-makers at the leading-edge of technology.

Specialist production teams with a wide range of finely-tuned skills are supplemented by international experts to make high quality films.

It's not only the equipment that has to be tough - our crews film in some of the most testing environments on the planet, from the sub-zero temperatures of Antarctica to the baking heat of arid deserts, from the depths of the deepest caves to the tops of erupting volcanoes, from the icy chill beneath the pack ice to the steamy humidity of the rain forest, and from sunken coral reefs to towering snow-capped mountains.

TVNZ Natural History programmes are watched by more than 400 million viewers in over 130 countries. Co-producers include The Discovery Channel, National Geographic, Turner Broadcasting, WNET and PBS in the US, the BBC and Channel 4 in the UK, NDR Germany, NHK Japan, Rai Italy, WildMedia.

Different versions of films are created for different markets, and more than 80 films have been translated and reversioned for NHK. TVNZ were the first company to do this for NHK outside Japan.

TVNZ ONLINE ... <http://www.tvnz.co.nz>

TVNZ Online is a World Wide Web site on the Internet.

TVNZ sees the Internet as a dynamic, cost-effective tool in communicating with key customers - viewers, advertisers and shareholders.

A key emphasis for the site is to reflect TV ONE and TV2 content online and it includes up-to-the-minute news from the *ONE Network News* newsroom; *News Now*; *Dunlop Sportsnight*; *60 Minutes*; weather; programme information and schedules - *What's On* and a TV Shop - *Electric Cat*(alogue). **TVNZ Online** also features business-to-business information in *@TVNZ* and an advertising and marketing forum in *Marketplace*.

TVNZ Online offers New Zealand browsers New Zealand information sourced from a brand that is known for its credibility and reliability. *News Now* uses the same resources and journalistic guidelines as *ONE Network News*. Programme information comes directly from TVNZ programmers.

All sections of **TVNZ Online** have an interactive feedback function, giving browsers an additional tool for communicating with the Company.

TVNZ recognises that the Internet, and in particular the World Wide Web, provides a new element in the marketing mix. For our advertising clients the combination of television - which provides a mass audience and established audience demographics - with the Internet - in-depth, interactive information - can be a very powerful tool.

TVNZ PACIFIC SERVICE

The TVNZ Pacific Service supplies programming and consultancy services to Pacific Island countries and New Zealand's Chatham Islands. In most cases, the Service has advised and/or assisted to develop the respective television stations through to the operational stage.

Fiji TV Ltd is the largest Pacific Service client, a television operation comprising, in addition to a free-to-air channel, the region's first pay television operation which consists of two channels. The Pacific Service is responsible for programme supply for all three of Fiji TV's services. TVNZ owns 5% of Fiji TV Ltd.

In addition to tape supplied programmes, TVNZ's comprehensive satellite network is used to deliver up-to-the-minute programme material throughout the Pacific region. TVNZ's strengths in the areas of satellite delivery and sports programmes provide a considerable contribution to the marketing ability and success of the Pacific Service.

SALES & MARKETING

TVNZ relies on revenue from advertisers to purchase and commission quality local and international programmes, employ skilled staff and perform all the other functions that make TVNZ a commercially successful broadcaster.

TVNZ's Sales & Marketing department works closely with over 400 advertisers and their agencies, such as Saatchi & Saatchi, Mojo, The Campaign Palace, Young & Rubicam, Bates, Total Media, Gestro Horne and many others, to make television work as a successful advertising medium for their products and brands.

With a total staff of approximately 120, TVNZ Sales & Marketing has sales offices in Auckland, Hamilton, Wellington, Christchurch, Dunedin and Australia.

TVNZ SATELLITE SERVICES

Satellite Services operates a private, end to end itinerant broadcast programme delivery network -

- within the Asia-Pacific region on POR 180
- from London to Perth on IOR 57 (as JV partner with Nine Network Australia in Gennet)
- in total, a near global network from London across the Indian Ocean interconnecting with the Asia-Pacific region through Perth.

TVNZ Satellite Services have full time uplinks in London, Perth, Hong Kong, Sydney, Los Angeles, Vancouver, Auckland

TVNZ Satellite Services interconnect to other networks at London, Los Angeles, Vancouver, Brewster, Hong Kong, Sydney

TVNZ Satellite Services' current activity includes the carriage of television programming for TVNZ - an anywhere-to-anywhere service; and also for third parties - casual carriage between specified points; and contracted carriage between specified points

TVNZ Satellite Services' success to date is largely attributable to its broadcaster to broadcaster one stop shop focus.

TVNZ Satellite Services provide:

- tails as required
- backup circuits as required
- fulltime dedicated or temporary circuits
- personalised service and 24 hour access to staff
- proactive and reactive staff - phone bookings
- easily understood, fixed price rate card
- broadcasting for broadcasters

TVNZ Satellite Services presently utilises around 44% of its available capacity. In comparison, Intelsat utilisation is less than 20% and Keystone 10-20% on international services.

TVNZ Satellite Services present customers include BBC, BSkyB (UK), ABN (Singapore), Reuters (UK), Star TV (Hong Kong), CNN, NBC, ITN, RTM Malaysia.

SOUTH PACIFIC PICTURES

South Pacific Pictures is the most prolific producer of drama in New Zealand and Australia.

In the six years since its inception, the company has produced over 900 hours of film and television programming.

South Pacific Pictures produces quality drama for television and cinema for its domestic market, for international sale and as a co-production partner.

The company has worked with a variety of partners, including Atlantis Films (Canada), Grundy Television (Australia), Beyond Productions (Australia), HTV (Wales), Central Television (UK), Anglia Television (UK), fProductions (France), Ravensburger Film and TV (Germany), and Universal MCA (USA).

It has projects in development with Gaumont (France), CLT (Germany), Ellipse (France), UFA (Germany) and ABC (Australia).

The company built its reputation as a producer of family drama, but over the past three years it has successfully moved into adult drama in the form of primetime mini-series, telemovies and feature films.

Some familiar titles on the South Pacific Pictures production record include *Shortland Street*, *City Life*, *Marlin Bay*, *Plainclothes*, *Deepwater Haven*, *The End of the Golden Weather*, and *The Boy From Andromeda*.

South Pacific Pictures is a subsidiary of TVNZ.

Phone: 64 9 4443000. Fax: 64 9 4435900

SPONSORSHIP

International research shows that sponsorship is the fastest growing element in the advertising and marketing mix of large corporations. TVNZ sponsors a wide range of organisations both nationally and regionally on an annual basis.

TVNZ forms sponsorship partnerships with organisations which fit our philosophy and vision and have strong business ethics and integrity. TVNZ aims to sponsor organisations which its viewers are interested in, sponsorships which are newsworthy, current, topical and unique.

TVNZ has a role to fulfil as a good corporate citizen and also a responsibility to support causes which are related to the television industry like the arts, cultural activities, film, marketing and advertising. TVNZ's sponsorships must benefit viewers through positive associations with organisations which either directly help or help to enhance the lives of New Zealanders today.

Most of TVNZ's sponsorships are in the form of airtime for charitable and arts organisations to. Among the organisations sponsored by TVNZ are the Variety Club, the NZ Symphony Orchestra, Opera NZ, the Young Achievers Awards and the Ellerslie Flower Show.

TVNZ's sponsorship committee carefully evaluates all proposals it receives to ensure they meet objectives and give benefits that fit the TVNZ profile. The sponsorship department works with all sponsorship recipients to evaluate sponsorships, ensuring benefits are maximised and TVNZ fulfils its role as a good corporate citizen in the community.

SPORT

Sports programmes always top the year's ratings in New Zealand - five of last year's top 10 programmes were sport, all of them produced by TVNZ.

But the reputation of the TVNZ sports team, especially *ONE World of Sport*, goes beyond New Zealand. TVNZ's coverage of the America's Cup last year earned praise from many overseas broadcasters, especially for the animated graphics developed for the Cup. As a result, TVNZ was awarded the contract to cover yachting at the Atlanta Olympic Games in July of this year as part of the host broadcast team. TVNZ's coverage of the Atlanta Games was the subject of much praise in New Zealand and the Pacific Islands; also in Hong Kong, Malaysia and Vietnam where local channels relied on TVNZ for their Games coverage.

TVNZ has also been appointed co-host broadcaster of the 1998 Commonwealth Games in Kuala Lumpur.

And TVNZ sent a core team to provide a portion of the international coverage of the cricket World Cup in Sri Lanka in February and March 1996.

TELETEXT

Teletext, TVNZ's free-to-air news and information service, broadcasts 24 hours a day and reaches around 40% of New Zealand homes.

Teletext broadcasts up-to-the-minute international, national and sports news, financial information, weather reports, leisure information, travel and home shopping.

Teletext's subtitling department produces subtitles to help deaf and hearing-impaired viewers enjoy up to 50 hours of TV programmes a week on TV ONE, TV2 and TV3. The service can be accessed by selecting page 801 on Teletext.

The Teletext Caption Centre provides subtitles for TV commercials, community notices, educational and training videos.

Welcome to the TVNZ New Zealand Encyclopedia 2nd Edition

The Bateman New Zealand Encyclopedia was first published as a book in 1984 by David Bateman Ltd of Auckland. It was an instant success, eagerly sought by parents, school teachers, librarians and others needing a digest of information about New Zealand in handy reference form.

Gordon McLauchlan, the well-known author and journalist, took on the demanding job of Editor-in-Chief and, together with a team of expert specialists in various fields, successfully completed the onerous task of selecting the most important of thousands of topics available for inclusion. Obviously, all could not be included and all the requirements and needs met. However, their work has stood the test of time for, because of the demand for more copies, it was necessary to reprint it several times, and it is now in its fourth edition, having sold well over 100,000 copies (a massive figure in book publishing terms for our small population). It is now a familiar reference tool in very many homes, schools, libraries and offices throughout the land.

In 1994, the first CD-ROM version was published. Voted "Best New Zealand Software" in 1995 by the readers of PC World magazine, the TVNZ New Zealand Encyclopedia proved extremely popular.

We are delighted to now present the 2nd edition of the TVNZ New Zealand Encyclopedia. This new revised, enhanced and extended version is testament to the popularity of the first. Technology and history have marched on since October 1994 and this new product is not a minor upgrade. This CD-ROM incorporates over 2,600 topics, 2,300 illustrations, 54 maps, 77 minutes of sound clips, and 20 minutes of video.

The 2nd edition of the TVNZ New Zealand Encyclopedia CD-ROM is an essential addition to every multimedia equipped home, school, library and business in New Zealand. It will make a superb present for New Zealand expatriates, overseas visitors to New Zealand and foreign relatives. The developers of and contributors to this 2nd edition of the TVNZ New Zealand Encyclopedia trust you enjoy the results of our work.

Tuwharetoa the Arawa at the post of peace. *Frontispiece, by Harry Rountree to Plume of the Arawas by Frank O V Acheson (Auckland, 1930). The New Zealand National Bibliography, Vol. II: 1890 - 1960 (Wellington, 1969), describes this as a "novel based on the Ngati-Tuwharetoa separation from Arawa and their occupation of Taupo-nui-a-Tia. An interesting and sympathetic account by a Maori Land Court Judge in which the narrative is marred by a formal stilted dialogue".*

Alexander Turnbull Library, Wellington, N.Z.

Sheep grazing on a Wairarapa run. *This watercolour was painted by William Mein Smith (1799-1869) in the 1840s. In July 1839 William Mein Smith was engaged by the New Zealand Company as their first surveyor. He arrived in Wellington in January 1840 on the Cuba and in that year laid out the towns of Petone and Wellington. In 1845 Smith and his family moved to the Wairarapa and settled at Huangarua. With Samuel Revans he took up farming, helping to establish the area's wool industry. He continued surveying and also served on the Legislative Council and the Wellington Provincial Council.*

Nouvelle-Zélande, presqu'île de Banks état de la petite colonie française d'Akaroa vers 1845 - Voyage du Rhin. *Etching) of Akaroa by Charles Meryon (1821-1868. Meryon was born in Paris and attended the French Naval School at Brest. He was commissioned to the corvette Le Rhin on which he made a voyage around the world. The vessel was stationed at Akaroa for some time and he made a number of pencil drawings of the area. When he returned to France he devoted himself to etching, and published Voyage à la Nouvelle Zélande...sur le navire Le Rhin... in 1866.*

Bibliophile Alexander Horsburgh Turnbull (1868-1918) (seated right), who bequeathed his collection of books, manuscripts and pictures to the Government "to form the nucleus of a New Zealand National Collection". With him are, left to right, his brother Robert Thorburn Turnbull, the founder of the firm Turnbull & Jones, and E F Hadfield, the son of the Rev Octavius Hadfield. They are sitting in the billiard room at 'Elibank', the Turnbull family home on The Terrace, Wellington. In 1916 Alexander had a home especially built to house his collection. The Government bought it and until 1972 it held the Alexander Turnbull Library.

Cartoon from an English paper illustrating incidents in the test match played on 2 December 1905 at Crystal Palace in which New Zealand beat England by 15 points to nil.

Duncan McGregor scored all the All Blacks' points - his four tries in a test match set a long-standing New Zealand record. The muddy conditions meant that W J Wallace was unable to kick any conversions. On one occasion the English player J Braithwaite touched down behind his own goal line to prevent New Zealand captain David Gallaher from scoring.

Tuwharetoa the Arawa at the post of peace. *Frontispiece, by Harry Rountree to Plume of the Arawas by Frank O V Acheson (Auckland, 1930). The New Zealand National Bibliography, Vol. II: 1890 - 1960 (Wellington, 1969), describes this as a "novel based on the Ngati-Tuwharetoa separation from Arawa and their occupation of Taupo-nui-a-Tia. An interesting and sympathetic account by a Maori Land Court Judge in which the narrative is marred by a formal stilted dialogue".*

Alexander Turnbull Library, Wellington, N.Z.

Skeletons of the dinornis in the Canterbury Museum, New Zealand. *Engraving published in the Illustrated London News, 8 February 1868. The accompanying article notes that Dr T Haast, FRS, the Government geologist of Canterbury, made extensive excavations in a peat swamp at Glenmark, obtaining bones of more than 100 specimens belonging to about 12 species of the dinornis. From these, 'with the able assistance of Mr Fuller the taxidermist, six complete or nearly complete skeletons were articulated for the Canterbury Museum...These form a most interesting feature in the museum which has just been opened to the public.' The engraving is based on a photograph by Daniel L Mundy.*

Photographer: Frederick Ashby Hargreaves 1854-1946.

Huts on the East Coast, North Island

Before they built homes in permanent materials, or while working in the railways or timber camps many people lived in huts. They were built with whatever was available - walls of wood, stone or sod; roofs thatched with such things as nikau, toetoe or manuka twigs, or manufactured products such as canvas, tarred cloth and corrugated iron. Earth floors were common. The danger of fire meant that fireplaces and chimneys were built with a wall around them and their own roof, which sloped upwards away from the house.

Charles Decimus Barraud 1822-1897

Interior of Otake [sic] Church, New Zealand. This Church which is 80 feet long and 36 feet broad and 40 feet high has been erected entirely by the voluntary labour of the Maori, under the superintendence of Archdeacon Hadfield and the Rev H Williams. The timber for the building was carefully selected from the forest and brought a distance of several miles. The ridge pole which is made of one solid totara tree 86 feet long, was brought a distance of 12 miles. The building was commenced in the year 1849 and opened in the year 1851, and is a noble specimen of native workmanship.

Educator and author Sylvia Ashton-Warner c1967. Born Sylvia Constance Ashton-Warner in Stratford in 1908, she trained as a teacher and after the birth of her three children taught with her husband Keith Henderson in several Maori schools. While teaching at Fernhill in Hawkes Bay Ashton-Warner developed her Key Vocabulary as a method of teaching reading by concentrating on words that are meaningful to individual children. After the death of her husband in 1969 she left New Zealand and in 1971 was appointed Professor of Education at Simon Fraser University in Vancouver. She returned to New Zealand in 1973.

Lady Mary Anne Barker (1831-1911) and her second husband, Frederick Napier Broome, who she married in 1865. The couple came to New Zealand soon after, purchasing Steventon station in Canterbury in 1866. Although they remained in New Zealand for only three years, Mary Anne's experiences here provided material for four of her twenty-two books. After Frederick was knighted in 1884 she changed her name to Lady Broome. Frontispiece from Lady Barker's Station amusements in New Zealand (London, 1870).

Poster advertising a lecture by Captain William Jackson Barry (1819-1907). Barry came to New Zealand in 1862, settling in Cromwell where he became the town's first mayor from 1866 to 1868. He published several books and travelled throughout New Zealand and to Australia and England giving lectures and public performances based on his 'colourful' life.

Skeletons of the dinornis in the Canterbury Museum, New Zealand. *Engraving published in the Illustrated London News, 8 February 1868. The accompanying article notes that Dr T Haast, FRS, the Government geologist of Canterbury, made extensive excavations in a peat swamp at Glenmark, obtaining bones of more than 100 specimens belonging to about 12 species of the dinornis. From these 'with the able assistance of Mr Fuller the taxidermist, six complete or nearly complete skeletons were articulated for the Canterbury Museum...These form a most interesting feature in the museum which has just been opened to the public.' The engraving is based on a photograph by Daniel L Mundy.*

Messrs Clifford's and Vavasour's clearing (Skipwith's) Parerua [sic] Bush. *Coloured steel engraving by Henry Melville from a painting by Samuel Charles Brees (1810-1865). Plate 21 (no.63) in Pictorial illustrations of New Zealand by S C Brees (London, 1847). With his cousin, William Vavasour, Charles Clifford (1813-1893) came to New Zealand in 1842, settling in Wellington. They bought property on the Wellington to Porirua road, as shown in the painting (the cottage was built by Mr Skipwith). In 1844 they leased land in the Wairarapa and drove 600 breeding ewes around the coast from Wellington. They later took leases on land in Marlborough and Canterbury.*

John Logan Campbell (1817-1912) holding a copy of Men of mark in New Zealand by Alfred Cox (published 1886). In his book Cox notes that "Dr Campbell has taken his share in all matters pertaining to development of the Colony whether commercially or politically". Known as the "Father of Auckland", Campbell was a well-known philanthropist as well as businessman. He gave Cornwall Park (named in honour of the Duke of Cornwall who visited New Zealand in 1901) to the city. In return the people of Auckland donated a statue of him in mayoral robes to stand at the gates of the park.

Title page of Manners and customs of the New Zealanders: and remarks to intending emigrants... by Joel Samuel Polack (1807-1882) (London: James Madden, 1840). The New Zealand National Bibliography notes that this publication is "An expansion of the Maori chapters in the earlier book ["Travels and adventures ..."] in which Polack attempted a systematic description of Maori social life and custom. Much detail, but imperfectly understood, on a range of topics and of greater interest for the specific incidents and personalities encountered on the author's travels".

Alexander Turnbull Library, Wellington, N.Z.

Liberal members of the House of Representatives, c1902

Back row L-R: Walter Symes (Egmont), John O'Meara (Pahiatua), Alfred L D Fraser (Napier), Jackson Palmer (Ohinemuri), Charles Hall (Waipawa), William H Field (Otaki), Joseph H Witheford (Auckland), Wiremu Pere (Eastern Maori); Centre row: James Bennet (Tuapeka), Henare Kaihau (Western Maori), Thomas Y Duncan (Oamaru, Minister of Lands), Charles H Mills (Wairau, Commissioner of Trade & Customs), Walter C F Carncross (Taieri), John Stevens (Manawatu); Front row: Alexander W Hogg (Masterton), E M Smith (Taranaki), James Carroll (Waiapu, Minister of Native Affairs), Sir Joseph G Ward (Awarua, Colonial Secretary), James McGowan (Thames, Minister of Justice), William Hall-Jones (Timaru, Minister of Public Works).

On the front table can be seen the mace. This is the traditional symbol of royal authority in the House although in New Zealand two of the three maces have been gifts of private individuals and have no royal origins. It is carried before the Speaker when he/she enters the chamber at the beginning of each day's proceedings and placed on the Table. In 1866 Sir Charles Clifford gifted the first mace to the New Zealand Parliament. It was destroyed in the fire at Parliament on 11 December 1907.

Messrs Clifford's and Vavasour's clearing (Skipwith's) Parerua [sic] Bush. *Coloured steel engraving by Henry Melville from a painting by Samuel Charles Brees (1810-1865). Plate 21 (no.63) in Pictorial illustrations of New Zealand by S C Brees (London, 1847). With his cousin, William Vavasour, Charles Clifford (1813-1893) came to New Zealand in 1842, settling in Wellington. They bought property on the Wellington to Porirua road, as shown in the painting (the cottage was built by Mr Skipwith). In 1844 they leased land in the Wairarapa and drove 600 breeding ewes around the coast from Wellington. They later took leases on land in Marlborough and Canterbury.*

John Logan Campbell (1817-1912) holding a copy of Men of mark in New Zealand by Alfred Cox (published 1886). In his book Cox notes that "Dr Campbell has taken his share in all matters pertaining to development of the Colony whether commercially or politically". Known as the "Father of Auckland", Campbell was a well-known philanthropist as well as businessman. He gave Cornwall Park (named in honour of the Duke of Cornwall who visited New Zealand in 1901) to the city. In return the people of Auckland donated a statue of him in mayoral robes to stand at the gates of the park.

James Coutts Crawford (1817-1889), (generally known as Coutts), was born in Scotland and came to New Zealand in 1839. This daguerrotype was probably taken before he left Scotland. He purchased land on Watts (later known as Miramar) peninsula, Wellington, establishing Glendavar cattle farm. In 1857 he settled permanently in New Zealand with his second wife, Jessie McBarnet. He expanded his farming pursuits and followed a number of scientific interests. In 1861 Crawford was appointed provincial geologist, which led to a number of explorations for potential mining sites and transport routes. He represented Wellington on the Legislative Council from 1859 to 1867. He published a number of papers and pamphlets on a wide variety of topics and in 1880 published Recollection of travel in New Zealand and Australia based on diaries kept during his trips.

Kate Milligan Evans (born Edger) (1857-1935), the first woman in the British Empire to gain a university degree. She gained a BA from Auckland University College in 1877. In 1882 she obtained her MA from Canterbury College, and soon after was appointed the first principal of Nelson College for Girls. On her 33rd birthday (6 January 1890) she married Rev William Albert Evans. Kate Evans was active in the campaign to win votes for women and in the Women's Temperance Union.

Lutheran parsonage at Upper Moutere, with Rev Johann Wilhelm Christoph Heine (1814-1900) seated in the garden. Reverend Heine arrived in 1843 on the St Pauli with other German (mainly Lutheran) settlers and missionaries. He moved to Upper Moutere in 1853. The settlement was known as Sarau and a church and parsonage were built there.

Cartoon from an English paper illustrating incidents in the test match played on 2 December 1905 at Crystal Palace in which New Zealand beat England by 15 points to nil.

Duncan McGregor scored all the All Black's points - his four tries in a test match set a long-standing New Zealand record. The muddy conditions meant that W J Wallace was unable to kick any conversions. On one occasion the English player J Braithwaite touched down behind his own goal line to prevent New Zealand captain David Gallaher from scoring.

Photographer: Stanley Polkinghorne Andrew 1879?-1964

*Monument erected above the grave of Labour Party leader Henry Edmund (Harry) Holland (1868-1933) in Bolton Street cemetery, Wellington. Sculpted by Richard Oliver Gross (1882-1964), it was unveiled in 1937. The inscription reads: "He devoted his life to free the world from unhappiness, tyranny and oppression."
c1937*

Charles Decimus Barraud 1822-1897

Interior of Otake [sic] Church, New Zealand. This Church which is 80 feet long and 36 feet broad and 40 feet high has been erected entirely by the voluntary labour of the Maori, under the superintendence of Archdeacon Hadfield and the Rev H Williams. The timber for the building was carefully selected from the forest and brought a distance of several miles. The ridge pole which is made of one solid totara tree 86 feet long, was brought a distance of 12 miles. The building was commenced in the year 1849 and opened in the year 1851, and is a noble specimen of native workmanship.

Physical Description: Hand-coloured lithograph by R K Thomas from an original by C D Barraud, 460 x 320mm

Alexander Turnbull Library, Wellington, N.Z.

Reference Number: D-P080021-B-CT

Liberal members of the House of Representatives, c1902

Back row L-R: Walter Symes (Egmont), John O'Meara (Pahiatua), Alfred L D Fraser (Napier), Jackson Palmer (Ohinemuri), Charles Hall (Waipawa), William H Field (Otaki), Joseph H Witheford (Auckland), Wiremu Pere (Eastern Maori); centre row: James Bennet (Tuapeka), Henare Kaihau (Western Maori), Thomas Y Duncan (Oamaru, Minister of Lands), Charles H Mills (Wairau, Commissioner of Trade & Customs), Walter C F Carncross (Taieri), John Stevens (Manawatu); front row: Alexander W Hogg (Masterton), E M Smith (Taranaki), James Carroll (Waiapu, Minister of Native Affairs), Sir Joseph G Ward (Awarua, Colonial Secretary), James McGowan (Thames, Minister of Justice), William Hall-Jones (Timaru, Minister of Public Works).

On the front table can be seen the mace. This is the traditional symbol of royal authority in the House although in New Zealand two of the three maces have been gifts of private individuals and have no royal origins. It is carried before the Speaker when he/she enters the chamber at the beginning of each day's proceedings and placed on the Table. In 1866 Sir Charles Clifford gifted the first mace to the New Zealand Parliament. It was destroyed in the fire at Parliament on 11 December 1907.

A view of the feast given by the governor to the natives at the Nuarake Hokianga, Feb 1840. Horeke Capt. Macdonald's [sic] station, ink drawing by Richard Taylor (1805-1873). After the Treaty of Waitangi was signed at Waitangi on 6 February 1840, Governor Hobson took the Treaty around the Bay of Islands to obtain more signatures. On 12 February hundreds of Maori gathered at Mangungu on the Hokianga Harbour, and many signed the Treaty. The following day Hobson provided a feast to celebrate the signing. This took place at Horeke, about 2km west of Mangungu. In 1831 Thomas McDonnell purchased a timber-milling, trading and shipbuilding business at Horeke and there he built his house, known as "The Cottage". It was surrounded by vineyards, orchards, employees cottages, and 17 cannon. The artist, the Reverend Richard Taylor, was a witness at the signing of the Treaty on several occasions, including at Waitangi.

Title page of Manners and customs of the New Zealanders: and remarks to intending emigrants... by Joel Samuel Polack (1807-1882) (London: James Madden, 1840). The New Zealand National Bibliography notes that this publication is "An expansion of the Maori chapters in the earlier book ["Travels and adventures ..."] in which Polack attempted a systematic description of Maori social life and custom. Much detail, but imperfectly understood, on a range of topics and of greater interest for the specific incidents and personalities encountered on the author's travels".

Alexander Turnbull Library, Wellington, N.Z.

Henare Kaihau (1854?-1920), Member of Parliament for Western Maori from 1896 to 1911, on left. It is likely that he is campaigning for a re-establishment of the Maori Parliament after the decline of the Kotahitanga movement in the 1890s. The papers in his hand seem to be titled "Te Kawenata Te Kotahitanga o Nga Iwi Maori".

His companion is not identified.

Liberal members of the House of Representatives, c1902

Back row L-R: Walter Symes (Egmont), John O'Meara (Pahiatua), Alfred L D Fraser (Napier), Jackson Palmer (Ohinemuri), Charles Hall (Waipawa), William H Field (Otaki), Joseph H Witheford (Auckland), Wiremu Pere (Eastern Maori). Centre row: James Bennet (Tuapeka), Henare Kaihau (Western Maori), Thomas Y Duncan (Oamaru, Minister of Lands), Charles H Mills (Wairau, Commissioner of Trade & Customs), Walter C F Carncross (Taieri), John Stevens (Manawatu). Front row: Alexander W Hogg (Masterton), E M Smith (Taranaki), James Carroll (Waiapu, Minister of Native Affairs), Sir Joseph G Ward (Awarua, Colonial Secretary), James McGowan (Thames, Minister of Justice), William Hall-Jones (Timaru, Minister of Public Works).

On the front table can be seen the mace. This is the traditional symbol of royal authority in the House although in New Zealand two of the three maces have been gifts of private individuals and have no royal origins. It is carried before the Speaker when he/she enters the chamber at the beginning of each day's proceedings and placed on the Table. In 1866 Sir Charles Clifford gifted the first mace to the New Zealand Parliament. It was destroyed in the fire at Parliament on 11 December 1907.

Lady Mary Anne Barker (1831-1911) and her second husband, Frederick Napier Broome, who she married in 1865. The couple came to New Zealand soon after, purchasing Steventon station in Canterbury in 1866. Although they remained in New Zealand for only three years, Mary Anne's experiences here provided material for four of her twenty-two books. After Frederick was knighted in 1884 she changed her name to Lady Broome. Frontispiece from Lady Barker's Station amusements in New Zealand (London, 1870).

Lutheran parsonage at Upper Moutere, with Rev Johann Wilhelm Christoph Heine (1814-1900) seated in the garden. Reverend Heine arrived in 1843 on the St Pauli with other German (mainly Lutheran) settlers and missionaries. He moved to Upper Moutere in 1853. The settlement was known as Sarau and a church and parsonage were built there.

Skeletons of the dinornis in the Canterbury Museum, New Zealand. *Engraving published in the Illustrated London News, 8 February 1868. The accompanying article notes that Dr T Haast, FRS, the government geologist of Canterbury, made extensive excavations in a peat swamp at Glenmark, obtaining bones of more than 100 specimens belonging to about 12 species of the dinornis. From these 'with the able assistance of Mr Fuller the taxidermist, six complete or nearly complete skeletons were articulated for the Canterbury Museum... These form a most interesting feature in the museum which has just been opened to the public.' The engraving is based on a photograph by Daniel L Mundy.*

Lutheran parsonage at Upper Moutere, with Rev Johann Wilhelm Christoph Heine (1814-1900) seated in the garden. Reverend Heine arrived in 1843 on the St Pauli with other German (mainly Lutheran) settlers and missionaries. He moved to Upper Moutere in 1853. The settlement was known as Sarau and a church and parsonage were built there.

View of Nelson Haven in Tasman's Gulf, New Zealand, including a part of the site of the intended town of Nelson, 1841. *Watercolour by Charles Heaphy (1820-1881). Heaphy came to Wellington in 1839 as draughtsman to the New Zealand Company. This is one of a series of paintings he made during the company's second expedition in 1841. A lithograph of this view was included in his promotional pamphlet Narrative of a residence in New Zealand. The first three immigrant ships Will Watch, Whitby and Arrow can be seen on the harbour with their flags flying.*

Edward Jerningham Wakefield (1820-1879), engraving by an unknown artist. Jerningham, as he was known, was born in London, the son of Edward Gibbon Wakefield and Eliza Pattle, and came to New Zealand with his uncle Colonel William Wakefield on the *Tory* in 1840. He acted as agent and explorer for the New Zealand Company. An account of his explorations, and the beginnings of the New Zealand Company settlements, was published in *his Adventure in New Zealand in 1845*.

This photograph was published in the New Zealand Free Lance with the caption "Miss Violet Walrond, the fifteen-year-old water wonder of New Zealand, and Miss Beaurepaire, the Australian lady champion swimmer, about to take to the water at the Olympic Games at Antwerp." In 1920 Violet Walrond became the first woman in any sport to represent New Zealand at the Olympic Games. She came fifth in the final of the 100 metres freestyle and seventh in the final of the 300 metres.

Published in the New Zealand Free Lance 6 October 1920, p13.

Charles Decimus Barraud 1822-1897

Interior of Otake [sic] Church, New Zealand. This Church which is 80 feet long and 36 feet broad and 40 feet high has been erected entirely by the voluntary labour of the Maori, under the superintendence of Archdeacon Hadfield and the Rev H Williams. The timber for the building was carefully selected from the forest and brought a distance of several miles. The ridge pole which is made of one solid totara tree 86 feet long, was brought a distance of 12 miles. The building was commenced in the year 1849 and opened in the year 1851, and is a noble specimen of native workmanship.

Physical Description: Hand-coloured lithograph by R K Thomas from an original by C D Barraud, 460 x 320mm

Alexander Turnbull Library, Wellington, N.Z.

Reference Number: D-P080021-B-CT

Liberal members of the House of Representatives, c1902

Back row L-R: Walter Symes (Egmont), John O'Meara (Pahiatua), Alfred L D Fraser (Napier), Jackson Palmer (Ohinemuri), Charles Hall (Waipawa), William H Field (Otaki), Joseph H Witheford (Auckland), Wiremu Pere (Eastern Maori); centre row: James Bennet (Tuapeka), Henare Kaihau (Western Maori), Thomas Y Duncan (Oamaru, Minister of Lands), Charles H Mills (Wairau, Commissioner of Trade & Customs), Walter C F Carncross (Taieri), John Stevens (Manawatu); front row: Alexander W Hogg (Masterton), E M Smith (Taranaki), James Carroll (Waiapu, Minister of Native Affairs), Sir Joseph G Ward (Awarua, Colonial Secretary), James McGowan (Thames, Minister of Justice), William Hall-Jones (Timaru, Minister of Public Works).

On the front table can be seen the mace. This is the traditional symbol of royal authority in the House although in New Zealand two of the three maces have been gifts of private individuals and have no royal origins. It is carried before the Speaker when he/she enters the chamber at the beginning of each day's proceedings and placed on the Table. In 1866 Sir Charles Clifford gifted the first mace to the New Zealand Parliament. It was destroyed in the fire at Parliament on 11 December 1907.

Parliament Buildings, Wellington, from the corner of Molesworth and Sydney Streets. The wooden General Assembly building on the left was designed by Colonial Architect William Clayton and built in 1873. Next to it is the General Assembly Library (designed by Thomas Turnbull), which was completed in 1899 on the site of the Provincial Council Building. On 11 December 1907 a fire destroyed the General Assembly building and badly damaged the library. From 1912 to 1922 the present Parliament House was constructed to replace the General Assembly Building, necessitating the closure of Sydney Street.

Metrosideros tomentosa (Pohutukawa), watercolour painted by Emily Cumming Harris (1837?-1925). Emily Harris was born in England, coming to New Plymouth with her parents in 1841. In 1860 the family moved to Nelson but Emily went to Australia to study art. When she returned to New Zealand she joined her sisters running a small primary school and gave private art lessons. In her own art work she concentrated on studies of New Zealand flowers and plants, and in 1890 she published three books of botanical drawings.

Title page of Manners and customs of the New Zealanders: and remarks to intending emigrants... by Joel Samuel Polack (1807-1882) (London: James Madden, 1840). The New Zealand National Bibliography notes that this publication is "An expansion of the Maori chapters in the earlier book ["Travels and adventures ..."] in which Polack attempted a systematic description of Maori social life and custom. Much detail, but imperfectly understood, on a range of topics and of greater interest for the specific incidents and personalities encountered on the author's travels".

Dr Maui Wiremu Piti Naera Pomare (1876-1930) of Ngati Mutunga and Ngati Toa. After attending Te Aute College Pomare gained his medical degree in the United States, returning to New Zealand in 1900. In the following year he became a Maori health officer. In 1912 he was appointed member of the Executive Council in Massey's government, and from 1915 to 1928 he was the Minister for the Cook Islands and from 1919 also held the Health portfolio. He was made a CMG in 1920 and created KBE in 1922.

Messrs Clifford's and Vavasour's clearing (Skipwith's) Parerua [sic] Bush. *Coloured steel engraving by Henry Melville from a painting by Samuel Charles Brees (1810-1865). Plate 21 (no.63) in Pictorial illustrations of New Zealand by S C Brees (London, 1847). With his cousin, William Vavasour, Charles Clifford (1813-1893) came to New Zealand in 1842, settling in Wellington. They bought property on the Wellington to Porirua road, as shown in the painting (the cottage was built by Mr Skipwith). In 1844 they leased land in the Wairarapa and drove 600 breeding ewes around the coast from Wellington. They later took leases on land in Marlborough and Canterbury.*

{ewc MVIMG, MVIMAGE, [HOTMACRO=Popup("AT")] !copyrigt.dib}

Photographer: Morris

*Julius Vogel (1835-1899) arrived in Dunedin in 1861. He held a number of political positions before becoming Premier in 1873. He was largely responsible for the immigration and public works policies of the 1870s. Vogel was knighted in 1875. In 1888 he and his wife Mary returned to England to live. In his retirement he wrote a futuristic novel 'Anno domini 2000; or a woman's destiny' (published 1889).

Photographer Unknown

Frederick Aloysius Weld (1823-1891) followed his cousins Charles Clifford and William Vavasour to New Zealand in 1844. In partnership with Clifford he ran sheep stations in Wairarapa and Marlborough. He held various political positions and was Premier for a year from 1864 until October 1865 (although his appointment to the position was never gazetted). In 1867 Weld and his family left New Zealand.

Making New Zealand Collection, Alexander Turnbull Library, Wellington, N.Z.

Photographer: C E Churton

The caption to this photograph published in the New Zealand Graphic of 30 September 1905 reads: "Wellington shooting sensation. A portrait of Lionel Terry, who is the self-confessed murderer of a Chinaman in Wellington.

This portrait was taken during his walking tour from Auckland to Wellington. A most accomplished, though eccentric man, Terry has made hundreds of chance friends during his tour of the colony." Edward Lionel Terry (1873-1932) arrived in New Zealand about 1901. In 1904 he published The Shadow, a book of poems with an introduction exhorting the need to curtail "alien" immigration and maintain racial purity. The following year he walked from Mangonui to Wellington distributing copies of his book and giving lectures. He tried to persuade Parliament that all non-European immigration should be stopped, and to attract more attention to his cause he shot Joe Kum Yung, a former miner who had lived in New Zealand for over 25 years, in Haining Street, Wellington. Terry was diagnosed as a paranoid schizophrenic and spent the rest of his life in mental hospitals.

William Pember Reeves (1857-1932) became editor of his father's weekly paper, the Canterbury Times, in 1885. He was a Member of Parliament from 1887 to 1896, representing St Albans and then the City of Christchurch. From 1891 he held various portfolios including Education, Justice and Labour. In 1889 he also became editor of the Lyttelton Times and in 1890 published Some historical notes on communism and socialism. In 1896 he became New Zealand's representative in London, a position he held until 1908. While overseas he continued to write and among his best known publications was The long white cloud - Ao Tea Roa (1898) a history of New Zealand.

'The Grange' on Wadestown hill overlooking Wellington, built in the 1850s for William Barnard Rhodes (1807?-1878). Rhodes settled in Wellington in 1839, establishing the firm of W B Rhodes & Company. His business was so successful he became known as "the millionaire of Wellington", and was a founding member of the Wellington Chamber of Commerce. Together with his brothers (Robert Heaton, George and Joseph), he had extensive land holdings in Hawkes Bay and Canterbury. He was Member of Parliament for Wellington from 1858 to 1866. After William's death in 1878 his second wife, Sarah Anne Moorhouse, remained at 'The Grange' until her death in 1916. The house was demolished in 1929.

*Robert Heaton Rhodes (1815-1884) came to New Zealand in 1850 and in partnership with his brothers William Barnard Rhodes and George Rhodes farmed extensively in Canterbury. He was one of the founders of the NZ Shipping Company and the Kaiapoi Woollen Mills. Rhodes was elected to the first Provincial Council in 1853 and sat almost continually until 1874. He also represented Akaroa in Parliament from 1871 to 1874.

James Crowe Richmond (1822-1898) settled in New Plymouth with his wife Mary Smith in 1857. He held a number of political positions, including membership of the Stafford ministry from 1865 to 1869. With other members of their extended family, the Richmonds settled in Nelson in the 1860s, where Mary died in 1865. In his later life James lived with his daughter, artist Dorothy Kate (Dolla) Richmond, both painting in the studio he had built on his house.

Photographer: Algernon Charles Gifford 1862-1948

*Donald Sutherland (1844?-1919), his wife Elizabeth (d.1923), their maid and a guide, at Milford Sound. In 1877 Donald had settled in Milford Sound. During explorations of the area in 1880 he discovered the falls that bear his name. He and Elizabeth married in 1890 and she purchased the site on which they built an accommodation house, 'The Chalet', to cater for tourists walking the Milford Track.

This photograph was published in the New Zealand Free Lance with the caption "Miss Violet Walrond, the fifteen-year-old water wonder of New Zealand, and Miss Beaurepaire, the Australian lady champion swimmer, about to take to the water at the Olympic Games at Antwerp." In 1920 Violet Walrond became the first woman in any sport to represent New Zealand at the Olympic Games. She came fifth in the final of the 100 metres freestyle and seventh in the final of the 300 metres.

Published in the New Zealand Free Lance 6 October 1920, p13.

Wreck of the Tararua, Pt Waihope [sic]. 1881, *watercolour by Samuel Edwy Green (1838-1935). The steamer Tararua was wrecked on the Otara Reef just off Waipapa Point at the beginning of a trip from Port Chalmers to Bluff (en route to Melbourne) on 29 April 1881. Of the 151 people on board, 131 died. In New Zealand's shipwrecks 1795-1982, C W N Ingram writes "Few, if any, wrecks off the coast of New Zealand have been attended by such tragic incidents as those connected with the loss of the steamer Tararua - hours of what must have been heartrending suspense, as those on board waited for the succour which never arrived; ever-increasing danger as the seas rose and swept the decks, until, in the hours of darkness, death mercifully ended their sufferings."*

Account issued by Mary Taylor (1817-1893) to Mrs Valance, January 1858. Mary, and her cousin Ellen Taylor, established their clothing and drapery shop in Wellington in 1849. After Ellen's death in 1851 Mary continued with the shop but sold it in 1859, returning to England the following year. The Taylor family (Mary, her parents and sister) were the basis of the Yorke family in Charlotte Bronte's novel Shirley - Mary and Charlotte had become friends at school. In her later years Mary published a number of books and was a strong advocate of women's rights.

A view of the feast given by the governor to the natives at the Nuarake Hokianga, Feb 1840. Horeke Capt. Macdonald's [sic] station, ink drawing by Richard Taylor (1805-1873). After the Treaty of Waitangi was signed at Waitangi on 6 February 1840, Governor Hobson took the Treaty around the Bay of Islands to obtain more signatures. On 12 February hundreds of Maori gathered at Mangungu on the Hokianga Harbour, and many signed the Treaty. The following day Hobson provided a feast to celebrate the signing. This took place at Horeke, about 2km west of Mangungu. In the 1831 Thomas McDonnell purchased a timber-milling, trading and shipbuilding business at Horeke and there he built his house, known as 'The Cottage'. It was surrounded by vineyards, orchards, employees' cottages, and 17 cannon. The artist, the Reverend Richard Taylor, was a witness at the signing of the Treaty on several occasions, including at Waitangi.

Te Kooti or Turuki addressing Rotorua natives at Tama te Kapua in 1887. *This pencil drawing of prophet and founder of the Ringatu Church Te Kooti Arikirangi Te Turuki (1832?-1893) has been attributed to Rev Richard Laishley (1815-1897). However there is some uncertainty about both the attribution and the date. There is no evidence that Te Kooti visited Tama-Te-Kapua in 1887 (the date on the drawing - which could have been added some time after the portrait was completed) but he is known to have been there in 1883. However, Rev Laishley was in England from February 1883 to January 1884. His son, Richard (1844-1907), a solicitor, was involved in taking depositions from Te Kooti in 1889 and may have had an earlier association with him. Judith Binney in Redemption Songs (Auckland, 1995) notes that the portrait "is similar to written descriptions of Te Kooti made on the occasion of his visit [to Tama-Te-Kapua] ..." and that "Te Kooti's fondness for wearing a large straw hat was noted by many other observers."*

Te Whiti, pencil drawing by William Francis Robert Gordon (d.1936). Taranaki leader and prophet Te Whiti-o-Rongomai III (?-1907) settled at Parihaka in the late 1840s. Together with spiritual leader Tohu Kakahi, he protested against the confiscation of lands in the Taranaki. From 1879 the followers of Te Whiti embarked upon a peaceful campaign of disrupting the surveyors and ploughing of land by settlers. A force of over 1500 Armed Constabulary were sent into Parihaka on 5 November 1881 to be met by 2000 seated Maori. Te Whiti and Tohu were among those arrested. After their trial they were sent to the South Island, finally returning to Parihaka in 1883. Te Whiti continued to protest.

Size and location of original unknown. W F Gordon attended a meeting at Parihaka in 1880. Te Whiti requested that no likenesses be taken (drawings or photographs) but Gordon did not want to waste the opportunity so, during the proceedings, sketched a likeness of the prophet on his shirtsleeve. This he later re-drew, using his memory to fill in the details. It was said to be a good likeness.

The caption to this photograph published in the New Zealand Graphic of 30 September 1905 reads: "Wellington shooting sensation. A portrait of Lionel Terry, who is the self-confessed murderer of a Chinaman in Wellington.

This portrait was taken during his walking tour from Auckland to Wellington. A most accomplished, though eccentric man, Terry has made hundreds of chance friends during his tour of the colony." Edward Lionel Terry (1873-1932) arrived in New Zealand about 1901. In 1904 he published The Shadow, a book of poems with an introduction exhorting the need to curtail "alien" immigration and maintain racial purity. The following year he walked from Mangonui to Wellington distributing copies of his book and giving lectures. He tried to persuade Parliament that all non-European immigration should be stopped, and to attract more attention to his cause he shot Joe Kum Yung, a former miner who had lived in New Zealand for over 25 years, in Haining Street, Wellington. Terry was diagnosed as a paranoid schizophrenic and spent the rest of his life in mental hospitals.

Photographer: Hartley Webster fl 1852-1900

Architect Frederick Thatcher (1814-1890), came to New Zealand in 1844 and became superintendent of public works in 1845. From 1848 to 1853 he was a student at St John's Theological College in Auckland. While there he prepared plans for many churches and schools. Frederick married Caroline Wright in 1849 and the family went back to England in 1856. On their return to New Zealand in 1861 Thatcher became the third vicar of St Paul's, Wellington, staying until 1865. During this time he designed a new church for the parish.. In 1868 he occupied the position of private secretary to the Governor and at the end of that year returned to England and became private secretary to Bishop Selwyn at Lichfield. In 1883 he was made prebendary of Lichfield Cathedral. He died in 1890 aged 76 years old.

Old Church, Remuera. *This watercolour of St Marks Church by John Kinder (1819-1903) was painted about 1857. Designed by Frederick Thatcher, the church was built in 1847. In 1859 it was moved to another site and a larger church was built. Reverend John Kinder was minister of St Marks from 1860 to 1863, and helped to pay for the building of the new church.*

A view of the feast given by the governor to the natives at the Nuarake Hokianga, Feb 1840. Horeke Capt. Macdonald's [sic] station, ink drawing by Richard Taylor (1805-1873). After the Treaty of Waitangi was signed at Waitangi on 6 February 1840, Governor Hobson took the Treaty around the Bay of Islands to obtain more signatures. On 12 February hundreds of Maori gathered at Mangungu on the Hokianga Harbour, and many signed the Treaty. The following day Hobson provided a feast to celebrate the signing. This took place at Horeke, about 2km west of Mangungu. In the 1831 Thomas McDonnell purchased a timber-milling, trading and shipbuilding business at Horeke and there he built his house, known as 'The Cottage'. It was surrounded by vineyards, orchards, employees' cottages, and 17 cannon. The artist, the Reverend Richard Taylor, was a witness at the signing of the Treaty on several occasions, including at Waitangi.

VAN DER VELDEN, Petrus - PHOTOGRAPH 1

{ewc MVIMG, MVIMAGE, [HOTMACRO=DIBJump("v0030pa.bmp")] !v0030pa.dib}

{ewc MVIMG, MVIMAGE, [HOTMACRO=Popup("AT")] !copyrigt.dib}

Photographer: Stanley Polkinghorne Andrew 1879?-1964

*Dutch-born artist Petrus van der Velden (1813-1913), who came to New Zealand with his wife, Sophia, and three children in 1890. The family settled in Christchurch where Petrus taught art as well as exhibiting his own work. In 1898 the family moved to Sydney and Sophia died there in 1899. Van der Velden returned to New Zealand in 1904.

Explorer and geologist Johann Franz Julius von Haast (1822-1887), with his wife Mary Dobson, sister of explorer Arthur Dobson. The couple married in June 1863. Haast came to New Zealand in 1858 to report on the prospects for German emigration. Soon after his arrival he met Austrian geologist Ferdinand von Hochstetter, with whom he became life-long friends, and together they made a number of geological expeditions. In 1861 he was appointed Canterbury provincial geologist and he explored and mapped the Canterbury and Westland areas. In 1868 Haast was appointed the first director of the Canterbury Museum. In 1886 he was created KCMG.

Sheep grazing on a Wairarapa run. *This watercolour was painted by William Mein Smith (1799-1869) in the 1840s. In July 1839 William Mein Smith was engaged by the New Zealand Company as their first surveyor. He arrived in Wellington in January 1840 on the Cuba and in that year laid out the towns of Petone and Wellington. In 1845 Smith and his family moved to the Wairarapa and settled at Huangarua. With Samuel Revans, he took up farming, helping to establish the area's wool industry. He continued surveying and also served on the Legislative Council and the Wellington Provincial Council.*

The town of Petre on the Wanganui River, in September 1841, *hand-coloured lithograph, by Day & Haghe from an original drawing by William Mein Smith (1799-1869). Plate VI in Illustrations to Adventure in New Zealand by Edward Jerningham Wakefield (London, 1845). Wanganui was originally named Petre, after one of the New Zealand Company directors. E J Wakefield negotiated the land of the settlement on behalf of the company and his house is included in the centre of this view, together with those of Dr Peter Wilson, the town's first medical practitioner (on the far left), and Henry Churton, a hotel and mill owner, in the foreground. Mt Tongariro can be seen in the distance.*

Cartoon from an English paper illustrating incidents in the test match played on 2 December 1905 at Crystal Palace in which New Zealand beat England by 15 points to nil.

Duncan McGregor scored all the All Black's points - his four tries in a test match set a long-standing New Zealand record. The muddy conditions meant that W J Wallace was unable to kick any conversions. On one occasion the English player J Braithwaite touched down behind his own goal line to prevent New Zealand captain David Gallaher from scoring.

*Paddle-steamer Manuwai on the Wanganui River. The Manuwai was built for Alexander Hatrick in 1894 and launched on the 18 September. The vessel was approximately 36 metres long, 5.5 metres wide, with a draught of 32.5cm, and was capable of carrying 400 passengers. In 1894 the fare for the trip from Wanganui to Pipiriki and return was 25 shillings. The Manuwai was sold in 1922 and moved to the Waikato River.

Liberal members of the House of Representatives, c1902

Back row L-R: Walter Symes (Egmont), John O'Meara (Pahiatua), Alfred L D Fraser (Napier), Jackson Palmer (Ohinemuri), Charles Hall (Waipawa), William H Field (Otaki), Joseph H Witheford (Auckland), Wiremu Pere (Eastern Maori); centre row: James Bennet (Tuapeka), Henare Kaihau (Western Maori), Thomas Y Duncan (Oamaru, Minister of Lands), Charles H Mills (Wairau, Commissioner of Trade & Customs), Walter C F Carncross (Taieri), John Stevens (Manawatu); front row: Alexander W Hogg (Masterton), E M Smith (Taranaki), James Carroll (Waiapu, Minister of Native Affairs), Sir Joseph G Ward (Awarua, Colonial Secretary), James McGowan (Thames, Minister of Justice), William Hall-Jones (Timaru, Minister of Public Works).

On the front table can be seen the mace. This is the traditional symbol of royal authority in the House although in New Zealand two of the three maces have been gifts of private individuals and have no royal origins. It is carried before the Speaker when he/she enters the chamber at the beginning of each day's proceedings and placed on the Table. In 1866 Sir Charles Clifford gifted the first mace to the New Zealand Parliament. It was destroyed in the fire at Parliament on 11 December 1907.

Parliament Buildings, Wellington, from the corner of Molesworth and Sydney Streets. The wooden General Assembly building on the left was designed by Colonial Architect William Clayton and built in 1873. Next to it is the General Assembly Library (designed by Thomas Turnbull), completed in 1899 on the site of the Provincial Council Building. On 11 December 1907 a fire destroyed the General Assembly building and badly damaged the library. From 1912 to 1922 the present Parliament House was constructed to replace the General Assembly Building, necessitating the closure of Sydney Street.

Barrett's Hotel, Wellington. *Hand-coloured engraving by Henry Melville from the original watercolour by Samuel Charles Brees (1810-1865). Plate 10, (no.30) in Pictorial illustrations of New Zealand by S C Brees (London, 1847). Brees notes that the house was originally brought from England by Dr Evans but purchased by Richard Barrett, who opened a hotel. At the time of the painting it was kept by Mr Suisted, who built on the projecting wing, which housed a billiard room below and a Free Mason's hall above.*

South Sea whale fishery. A representation of the ships Amelia Wilson & Castor off the island of Bouro [sic] with their boats & crew in the various process [sic] of fishing shewing the manner the Spermacetti whales are caught, also the mode of cutting them into the ship and boiling the oil on deck.

Captions: (left) The head of a large whale in the agonies of death; (right) A boat destroy'd by a wounded whale

Hand-coloured aquatint engraved by T Sutherland from a painting by William John Huggins (1781-1845), published in London in 1825. The "South Sea whale fishery" was the name given to all whaling grounds not in the "Greenland whale fishery", and after 1798 this included the South Pacific. This scene shows activities off the Island of Buru, just east of present day Siluwesi, Indonesia.

Elizabeth Yates (1840-48?-1918) was the first woman in the British Empire to become mayor when she was elected to the position in Onehunga on 29 November 1893. She was defeated at the election in 1894 but returned to the council between 1899 and 1901. Her husband, Michael Yates, had been mayor from 1888 to 1892.

Peter Henry Buck (Te Rangi Hiroa) (1877?-1951) completed his first medical degree in 1904, and then graduated as an MD in 1910 with a thesis on "Medicine amongst the Maoris in ancient and modern times". In 1905 he was appointed as a medical officer to Maori, working with Maui Pomare, and also in that year he married Margaret Wilson. Buck represented Northern Maori in Parliament from 1909 to 1914. He was knighted in 1946

Abbotsford, 8 km from Dunedin, was the scene of the largest landslip ever to occur in a built-up area in NZ. A few minutes after 9pm on 8 August 1979, 7 ha of the hillside suburb began its slide about 50 m down a slope. Although there was no loss of life, nor any serious injury, 69 houses were written off and many others damaged. A Commission of Inquiry into the disaster reported in November 1980 that no single dominant reason could be found, that the basic cause was a 'geological precondition' which had been exacerbated by land development and motorway construction after it was first subdivided for housing in 1953. The area was originally named, it is believed, 'Abbot's Ford', after a surveyor, Edward Immyns Abbot, who waded across the stream there in relatively deep water while other surveyors were looking for a more suitable place to cross. A later claim is that the railway station (on the Dunedin-Mosgiel line) was sited on a farm which had been called Abbotsford after the home of Sir Walter Scott.

Abbotsford was to be the name of a town in Hawke's Bay when it was planned on a property purchased from a farmer, F S Abbott. However, when a town did eventually grow on the site it became Waipawa.

Abel Tasman National Park covers 22,541 ha of bush country along the shores of Tasman Bay in Nelson, including offshore islands and hundreds of bays and beaches along the broken coastline. The smallest of the country's 13 national parks, it was opened in December 1942, the 300th anniversary of the visit to Tasman Bay of Dutch explorer, Abel Janzoon Tasman, the first European to visit NZ. Botanically the park is of special interest because its bush is a blend of the natural cover of both the North and South Islands, a rare if not unique phenomenon. (See National Parks.)

ABERDEEN ANGUS

(see Angus)

ABORIGINES PROTECTION SOCIETY

Aborigines Protection Society, was a humanitarian organisation in Britain in the 19th century, which helped condition policy towards native peoples within the British Empire, including NZ's Maori.

ACADEMY OF FINE ARTS, NEW ZEALAND

New Zealand Academy of Fine Arts, was formed in 1889 from the Fine Arts Society of NZ, but was at first essentially the Wellington equivalent of the arts societies formed in the major centres about that time. The government provided a site in Wellington in 1892 and the citizens of the city built a gallery which was opened in 1906 and remained a free municipal gallery until 1936 when the building and its contents were donated to the newly formed National Art Gallery, now incorporated within the new Museum of NZ Te Papa Tongarewa.

HMSV Acheron, commanded by Captain John Lort Stokes, an experienced Royal Navy hydrographer, spent four years, from 1848, surveying NZ's major harbours and much of the coastline. The *Acheron* was the first survey vessel to work in NZ waters since the time of Captain Cook. Stokes served on the *Beagle* under Captain Robert FitzRoy (later Governor FitzRoy) for 18 years, including during the voyage with the naturalist, Charles Darwin, aboard, and he commanded the vessel himself between 1837 and 1843. *Acheron* was an early steamship design (the first steam-powered vessel to visit some ports), equipped with both sails and paddle-wheels. Acheron Passage, Fiordland, and two Acheron Rivers, one in Marlborough and the other in central Canterbury, are named after the ship. The definitive book on the survey work is *The Cruise of the Acheron*, by Sheila Natusch (1978).

ACC

ACC — in its present form as the Accident Rehabilitation and Compensation Insurance Corporation — was established by government legislation in 1992, to administer compulsory accident insurance for all NZers with the threefold aim of promoting safety from accident among all citizens, providing for the rehabilitation of the injured, and ensuring fair and reasonable compensation to every accident victim.

The concept of a no-fault scheme for supporting the victims of accidents was investigated by a 1967 Royal Commission and, as a consequence, the Accident Compensation Commission was set up by 1972 legislation. The first legislative changes were made in 1982 which also effected a name change to the Accident Compensation Corporation.

The ACC became a Crown Entity under the 1992 Act which gave it the new name and made radical changes in a bid to better manage the escalating demands on funding under a scheme which has revenue of about \$1.5 billion a year. The breadth of coverage was reduced on the grounds that the scheme had become too costly. A case management system was introduced to co-ordinate individual care, compensation and rehabilitation. The legislation and the administration of the scheme remained controversial, however, and an independent review in 1994 recommended further changes.

The philosophy behind the scheme was that the community as a whole accepted responsibility for the accidents which inevitably afflict a proportion of its members. The scheme is funded by the following means: levies on employers (including the Crown), their employees and the self-employed, paid through the Inland Revenue Department as agent for the corporation; levies on motor-vehicle owners, paid at the time of registration; and general taxation from which the government contributes on behalf of those not in paid employment. ACC attempts to pay the costs for each sector from the appropriate premiums.

ACC pays medical and hospital costs, pays 80 per cent income replacement, and an independence allowance for lasting disability. It also funds safety programmes, rehabilitation programmes, and supports land and air ambulance services.

The scheme was a world first and was regarded as an innovative piece of social welfare. It superseded legal rights previously held by citizens to sue through the courts for damages in cases where negligence contributed to the cause of an accident.

HMS/HMNZS Achilles was one of a British naval force of three cruisers which fought the German pocket battleship, the *Admiral Graf Spee*, in the Battle of the River Plate, off Montevideo, Uruguay, on 13 December 1939. With HMS *Exeter* and HMS *Ajax*, the *Achilles* drove the much bigger and more heavily armed German ship into Montevideo Harbour, where her commanding officer, Captain Hans Langsdorf, scuttled her on 17 December. *Achilles* lost four men in the battle. At the time she was officially part of the NZ Division of the Royal Navy. Most of her complement were NZers and she carried the NZ Ensign into the battle. The vessel became part of the Royal NZ Navy when it was formed in September 1941 and saw action in the Pacific, losing 13 men in Japanese dive-bomber attacks off Guadalcanal in January 1943. The *Achilles* went back to the Royal Navy after World War Two. She was sold to the Indian navy and renamed INS *Delhi* before she finally went to the shipbreakers in 1978.

The men of the *Achilles* were given a spectacular heroes' welcome when the ship called at Auckland on 23 February 1940. One estimate is the crowd that turned out to cheer them as they marched up Queen Street for a civic reception numbered 100,000.

The Captain of the *Achilles* at the Battle of the River Plate was Sir Edward Parry (1893–1972) who was later Commodore and Chief of Staff in NZ. Parry Channel, between Bream Head on the east coast of Northland, and the Hen and Chickens Islands, was named after Parry during the national exultation following the performance of the *Achilles* in the battle.

John Barton Arundel Acland (1824–1904) was the first member of this famous family to settle in NZ. He was born at Killerton, Devonshire, the sixth son of Sir Thomas Dyke Acland, 10th Baronet of Killerton, and was educated at Harrow and Christ Church, Oxford, where he took a BA (Hons) in mathematics and an MA. He studied law and later practised in London. With Charles George Tripp, a close friend, he emigrated to Canterbury, arriving in 1855. He spent the first year as a cadet on a sheep run. Then he and Tripp took up their own land at Mt Peel in Canterbury, farming in partnership until 1862 when Acland became the sole owner of Mt Peel, which remains in the family today and is one of the country's most famous hill-country sheep stations. Acland was a member of the Legislative Council for 34 years until his retirement in 1899. Throughout his life he was involved in educational and church administration.

Two of his sons, **Sir Hugh Thomas Dyke Acland**, a surgeon, and **Henry Dyke Acland**, a lawyer, had distinguished careers in Canterbury, and a grandson, **Sir Hugh John Dyke Acland** (known as Jack), was MP for Temuka (1942–46) and chairman of the New Zealand Wool Board (1960–72).

ACLAND, Leopold George Dyke

Leopold George Dyke Acland (1876–1948) was born at Christchurch, the son of a runholder. He worked as a young man at Mt Peel Station, owned by a relative; bought Glentanner Station, near Mt Cook; served in the Boer War with distinction; and travelled through New Guinea and India before settling for a time in Japan where he managed a shipping office at Kobe. He then travelled to Moscow and St Petersburg on the trans-Siberian railway and returned to NZ via England. He owned in succession Braemar Station in the Mackenzie Country, North Clumbar at Hororata and Cecil Peak by Lake Wakatipu. He served as a major in World War One. He settled ultimately at Hororata. Acland was passionately interested in farming and his book, *The Early Canterbury Runs*, was first published in 1930. It was revised and enlarged in 1946 and again in 1951 and is one of NZ's most famous history resource books.

ADAMS, Arthur Henry

```
{ewc

a0125pas.dib
}
```

Arthur Henry Adams (1872–1936) was born in Lawrence, Otago, the son of C W Adams. Arthur graduated BA from Otago University in 1894, joined the literary staff of the *Evening Post* in Wellington, contributing original prose and other work, and wrote the libretto of a Maori comic opera, *Tapu*, which was produced with success in both NZ and Australia. Adams worked for J C Williamson, the Australasian theatrical company, as dramatic secretary and wrote plays, pantomimes and verse. He was war correspondent for the *Sydney Morning Herald* and a group of NZ newspapers in China during the Boxer rebellion and later worked in England as a writer and freelance journalist before returning to NZ in 1905. The following year he went back to Australia and spent the remainder of his career there, mostly working on newspapers. He continued to write plays, novels and verse, work which was highly regarded then but is of little interest today.

ADAMS, Charles William

Charles William Adams (1840–1918) was born and educated in Tasmania, qualified as a surveyor and arrived in NZ in 1862. He became Chief Surveyor in Otago in 1885 and Chief Surveyor and Commissioner of Crown Lands in Marlborough in 1897. Adams was an accomplished astronomer, and collaborated with an observer in Sydney, by telegraph, to establish the true latitude of Wellington (with an error of only 17 feet [5.2 m]). He discovered an error in the position of a star as it was placed by the *Nautical Almanac*, and he surveyed the Sutherland Falls within eight years of their discovery putting their height at 1,904 feet (580.3 m), accurate within one yard.

ADAMS, William Acton Blakeway

William Acton Blakeway Adams (1843–1924) became one of the largest landholders in NZ during the second half of the 19th century. Having bought Tarndale Station in Marlborough in 1878, the year he entered Parliament as the member for Nelson, he later acquired Molesworth, Woodbank, Hopefield, Island Farm, Salop Downs and Motanau, and at one time was shearing 75,000 sheep. His Marlborough properties were later depleted by the rabbit scourge. Adams arrived in NZ in 1850 with his father, William, who was the first Superintendent of Marlborough Province.

ADCOCK, Fleur

Fleur Adcock (1934–) was born at Auckland in 1934 and educated at Wellington Girls' College and Victoria University but has lived in England since 1963. Adcock is regarded as an outstanding contemporary poet in England. Her work includes *The Eye of the Hurricane* (1964), *Tigers* (1967), *High Tide in the Garden* (1971), *The Inner Harbour* (1979), and *Selected Poems* (1983). She has visited this country regularly over the years and kept in touch with its literature, is widely admired here, and still has strong family ties (the novelist Marilyn Duckworth is her sister).

Addington is a residential suburb of Christchurch, best known for the raceway on which the New Zealand Trotting Cup is held each year early in November. It had early industrial importance as the site of a major railways workshop. It was named after the summer residence of the archbishops of Canterbury in England, Addington Palace, because when the Canterbury Association was formed to settle the province in 1848, the then Archbishop of Canterbury, Dr J B Sumner, was one of the foundation members.

```

Aerial topdressing developed quickly in NZ after World War Two because about two-thirds of the 21.2 million ha of farmland is too undulating or hilly to make the distribution of fertiliser by hand or from surface transport economically feasible. Before aerial topdressing and pasture sowing were developed, the fertility of hill country was declining steadily. A Hunterville farmer, John Lambert, first seriously promoted the idea in 1926, and in 1938 the chief pilot of the Aerodrome Services Division of the Public Works Department, A M Pritchard, sowed lupin seed from the air on the sand dunes of Ninety Mile Beach, demonstrating the effectiveness of aerial sowing. Full-scale trials were held by the RNZAF in 1948 and 1949 when the first 5,000 tonnes of superphosphate flared out over the countryside. By the early 1980s, 250,000 tonnes of phosphates and 40,000 tonnes of lime were aerially applied and by the mid-1990s the figures were 390,000 tonnes of phosphates and 50,000 tonnes of lime.

The agricultural aviation industry increasingly uses helicopters rather than fixed-wing aircraft for a whole range of activities, including spraying insecticides from the air each year, as well as dropping poisons for noxious animals, and fencing and other supplies into inaccessible country.

AERO CLUBS

```
{ewc
MVIMG,
MVIMAGE,
[HOTMACR
O=MVJump(
"A0190PG",
TOPIC")] !
a0190pas.dib
}
```

Aero Clubs were first established in NZ in 1928 following a decision by the government to buy eight de Havilland Moths (DH60), four of which were issued to the Permanent Air Force and two to clubs officially approved by the Defence Department. The Royal NZ Aero Club (RNZAC) was formed in 1930 and was affiliated to the Royal Aero Club of England and, soon afterwards, to the Federation Internationale Aeronautique (FIA). The RNZAC became the national body for air-sport control in NZ, and was traditionally the flying training organisation for pilots. Affiliated organisations control the conduct of gliding, aeromodelling, model rocketry, parachuting, aerobatics, ballooning, hang-gliding, parapenting and microlight flying. There are now 52 clubs (affiliated to the RNZAC), with 6,100 members. The clubs still undertake most of the flying training in the country, although private companies are gradually increasing their share of the training business, especially in Auckland.

```

Agricultural Societies began in NZ with the formation of the Auckland Agricultural and Pastoral Association in 1843, followed by Hawke's Bay in 1858, Canterbury in 1863, Southland in 1867, Otago in 1876, Manawatu and West Coast in 1886. There was an ever-increasing number of the societies as the 19th century closed, and the 20th century opened with even small country communities having their own organisations. The aim — to develop farming, particularly livestock, and generally to improve the lot of country people — was enshrined in the charters and eventually the societies (some were called associations) were registered under the Agricultural and Pastoral Societies Act of 1908.

At the local level the A&P Show became a focal point of rural life. At these annual gala days machinery was displayed, and stock, including children's pets, were judged; and competitions were held for the best fruits, vegetables, preserves, cakes and a wide range of other home products, including craft objects. The shows were usually held in spring or summer, and some of the larger city-based associations held winter shows as well. By the end of World War One, there were 58 agricultural shows throughout the country, half of them held between the middle of October and the end of November and the other half between then and the end of April.

At the national level the agricultural societies generated some social and political influence as the NZ Council of Agriculture (from 1914) and later as the Royal Agricultural Society (from 1924). Although there has been an increasing urban drift since World War Two, the number of societies affiliated to the Royal Agricultural Society has increased steadily and stands today at 110. Each group holds a show each year, still mostly between spring and the end of summer. Each year, one of the shows is declared a Royal Agricultural Show which attracts greater attention than usual.

Maori Agriculture began in NZ with the early Polynesian settlers but because of the abundance in the beginning of various species of moas and other bird life, it was less important then than it became later. Moas had thrived with few natural enemies and were vulnerable to early Polynesian arrivals who have become known historically as the moa-hunters. Later, Maori became skilled and dedicated agriculturists nurturing a narrow range of food and fibre plants brought from the tropics to this southern temperate zone, notably the kumara, taro, yam, gourd and paper mulberry. Maori also used some native plants regularly for food and clothing which they did not plant and nurture, such as the fern root (a staple food), flax and cabbage tree.

The kumara was assiduously cultivated in sheltered plots in the northern regions of the North Island and on the northernmost tip of the South Island. Unlike its tropical parents, the kumara has never seeded here, which makes its survival remarkable. Maori farmers grew taro and other tropical plants on very sheltered northerly slopes but the kumara was the food plant that did best here and which they came to value most. They conditioned the soil with sand to make it light and porous and after about three years of cropping would allow the fern to take over. After another three or four years manuka scrub would creep back over the plot and be allowed to grow there for about a decade before it would possibly be burned down and kumara replanted. Each step of the planting, tending and harvesting of plants was ritualised by the tohunga and the chief with incantations to Pani, mother of Rongo, the god of food plants. The moon was studied before planting, the stars observed, soil temperature felt, and perhaps a Rongo stone fertility symbol planted with a chant.

When the first Europeans arrived, large areas were under cultivation in coastal areas of the North Island but Maori farming perhaps had its heyday during the 19th century before the land wars of the 1860s. The Europeans brought with them the potato, which could be grown over a huge area of the country, and could be planted later than the kumara and harvested earlier. The Maori relished the range of crops from the northern temperate zone, most of which turned the weather, previously an enemy, into an ally. Maori farmers also fed the early European settlers and by 1830 were heavily involved in the export to Australia of potatoes and grain. William Swainson is quoted as reporting that a native population of around 8,000 in the Bay of Plenty, Taupo and Rotorua region in 1857 'had upwards of 3,000 acres of land in wheat, 3,000 acres in potatoes, nearly 2,000 acres in maize and upwards of 1,000 acres planted with kumaras. They owned nearly 1,000 horses, 200 head of cattle and 5,000 pigs,

four water-mills and 96 ploughs. They were also the owners of 43 small coasting vessels, averaging 20 tons each, and upwards of 900 canoes.' Depressed prices and the land wars brought this era of Maori farming to an abrupt end.

AGRICULTURE - Agriculture in the 19th century

```

```

Agriculture in the 19th century began with arable farming in the Bay of Islands from the earliest days of European settlement with the Christian missionaries encouraging European-style farming among the local Maori. Early in the 1840s there were settlers in the South Island, among them the Deans brothers, cropping and running cattle and sheep at Riccarton, and ex-whaler Johnny Jones at Waikouaiti, north of Dunedin, who by 1844 was running 2,000 sheep, 200 cattle and 100 horses.

The first European farming enterprise of any size was wool-growing, which began on a large scale in the Wairarapa within four years of the founding of the NZ Company settlement in Wellington. The settlement was not doing well when some well-educated entrepreneurial settlers, enlightened probably by the Australian experience, realised that running sheep on native pasture was a way to make fast money in the young colony. They knew that developing the millions of acres of rain forest into farmland would be a difficult and expensive task. They moved Merino sheep, brought from Australia, around the Mukamuka Rocks on the south coast of the North Island and into the Wairarapa, which had been described by a surveyor, Charles Brees, as having 'an abundance of prairie grass and fernland for pastoral purposes. . .'. Among these farming pioneers were Frederick Weld, who was later a premier of the colony, Charles Clifford, William Vavasour, Henry Petre, Charles Bidwill and William Swainson Jnr. These and other men were later responsible for the spread of sheep farming into Marlborough, Hawke's Bay, Canterbury and Otago, to anywhere in fact where there was native pasture ready to feed sheep.

Wool was for many years the major farming export crop but small amounts of butter (preserved in brine) and cheese were shipped to Australia.

The big sheep stations had continuing problems with sheep scab, heavy rabbit infestation, lamb losses in unseasonal spring cold snaps, stock losses from flooding and fluctuating wool prices.

In the 1880s people numbered nearly 490,000 and sheep just on 13 million, an even higher number of sheep per person than now, yet meat was worthless and wool prices were steadily coming down. But a technological advance ensured that NZ would remain a prosperous agricultural country with an export industry. As the 1870s closed, refrigerated ships began successfully carrying meat from South America and Australia to Europe. William Saltau Davidson, manager of the NZ and Australian Land Company, based in the South Island, persuaded his company to invest in a trial shipment of meat from Port Chalmers to London aboard the refrigerated vessel Dunedin. The experiment worked and it changed the face of sheep farming in NZ as graziers switched emphasis from the merino with its fine wool and scrawny carcass to crossbreds with coarser fleeces and meatier bodies.

Once the natural grasslands in the Wairarapa, Hawke's Bay and wide areas of the South Island had been broken in, land-hungry settlers turned their attention to the North Island, heavily clad in rain forest, and in many cases vigorously fought for by the Maori. Because of the difficulty and expense involved in clearing the land, it was settled later than that on which the early sheep stations were founded, and on the very best of this land the dairy industry was built up.

Every farmer had at least his house-cow to keep him and maybe supplied a nearby township with milk and butter. As early as the 1850s there were dairies on the Banks Peninsula producing substantial amounts of cheese. The first dairy factory, in the sense that it processed the production of several herds, was established in 1871 by a group of eight men on the property of John and Catherine Mathieson on the Otago Peninsula. It was a co-operative called the Peninsula Cheese-making Company. Although privately-owned dairy companies dominated the national scene until well into the 20th century, the co-operative principle established by the Otago Dairy Company ultimately triumphed.

Taranaki and Waikato began early on to dominate dairy production and they still do. Among the early leaders were Chew Chong, a Chinese immigrant trader, who opened a sophisticated butter factory in Eltham in 1887, and Henry Reynolds, a Cornishman, who established the Anchor brand with the first factory in the Waikato at Pukekura, near Cambridge.

Refrigerated shipping meant as much to dairying as it did to the meat industry and since early this century a huge export industry has developed and continues to do so, dominated by men with a talent for innovation and technical ingenuity.

During the last three decades of the 19th century wheat became increasingly popular as a crop in Canterbury and Otago and huge areas were also used for oats. Exports of wheat in 1883–84 reached 5,142,000 bushels, a level that has never been surpassed. But yield per acre began to decline over the following decade.

AGRICULTURE - Beef Cattle

```

Most beef cattle are reared in association with the farming of sheep, a situation which did not exist last century when the grazing of cattle with sheep was regarded as an unsatisfactory farming practice. Beef cattle number about 4.6 million, 3.7 million of them in the North Island, predominantly in the Waikato, Manawatu-Wanganui, Northland and Hawke's Bay. Canterbury, Otago and Southland carry most beef cattle in the South Island. The national herd is predominantly Angus or Hereford, but in recent years there has been an increasing number of exotic breeds introduced from Europe. Beef and veal exports, fresh, chilled or frozen, have climbed gradually during the 1990s to around 560,000 tonnes a year. Most of it is in the form of manufacturing beef to North America.

AGRICULTURE - Goats

```

Goats are farmed for their fibre, producing about 150 tonnes of mohair, 40 tonnes of cashmere and 22 tonnes of cashgora a year by the mid-1990s. Goats had no part in the traditional NZ pastoral industry but interest grew in export possibilities about the same time as deer began to be farmed. The total population of goats producing fibre is just under 500,000, and another 13,000 are kept for their milk.

A wide variety of cereals are grown in NZ, mostly for domestic use in human and stock foods. The biggest grain crop is barley, used for malting as part of the preparation for making beer and whisky, and for the manufacture of stock foods. It occupies about 67,000 ha, 55,000 ha in the South Island, for a total annual production of around 319,000 tonnes. About 38,000 ha of wheat is grown each year, all but 8,000 ha of it in the South Island, producing over 190,000 tonnes a year. Wheat was once the principal cereal crop but the climate is so variable that the top milling quality breeds are not as successful here as in Australia, Canada and other traditional wheat-growing nations; and neither can NZ compete with the scale of their operations. Oats on 14,000 ha totals around 58,000 tonnes a year. The only grain crop grown more extensively and productively in the North Island is maize on a total area of 18,000 ha, all but 360 of them in the north, and a production of 164,000 tonnes.

AGRICULTURE - Horticulture

```

```

Vegetables, including potatoes, for sale fresh or for processing, for both domestic consumption and export, occupy a steadily increasing area, mostly near Auckland, Hastings, Gisborne, Christchurch, Palmerston North/Wanganui and Timaru.

Substantial areas are used for grass and clover seed and export markets have developed in the US, the UK and Australia.

AGRICULTURE - Citrus fruit

```
{ewc
MVIMG,
MVIMAGE,
[HOTMACR
O=MVJump(
"A0280P01",
"TOPIC")] !
a0280pas.dib
}
```

Citrus fruit production has remained largely unchanged over the past five years with grapefruit occupying 167 ha and lemons 334 ha, both mostly in the Bay of Plenty, mandarins 544 ha, predominantly in Northland, oranges 826 ha and tangelos 406 ha, both mainly in Northland and the Bay of Plenty — for a total of 2,277 ha.

Apples, pears and nashi (Asian pears) occupy 1,386 ha, almost exclusively in Hawke's Bay and Nelson, and while apples and pears have been steadily expanding, nashi crops have been coming down. Apples and pears are traditional export crops which once went almost exclusively to the UK, but are now sent to a diversity of markets. They were for decades the staple export fruit. Exports in 1932 were 29,000 tonnes, a total they did not reach again until 1956. Uncertainty has prevailed from time to time but a great surge in the 1970s pulled apples and pears back into prominence and exports peaked at 320,000 tonnes in 1991.

Indeed, pip fruit, with kiwifruit, still make up the great majority of fruit exports, which totalled nearly 470,000 tonnes a year in the mid-1990s, worth \$890 million.

Stone fruit — apricots, nectarines, peaches, plums and cherries — grow on 3,242 ha in Hawke's Bay, Central Otago, Marlborough and Auckland.

Berryfruit — blackcurrants, blueberries, boysenberries, raspberries and strawberries — covered 1,867 ha in Canterbury, Southland, Waikato, Nelson, Auckland and Northland but the area has been steadily contracting for most of the berries during the early 1990s.

Avocados, feijoas, kiwifruit, tamarillos, passionfruit and outdoor grapes grow on nearly 23,000 ha.

The glamour crop for many years was kiwifruit. Originally from China, its potential as a fruit that would take off internationally was first perceived by a small handful of farmers in the Bay of Plenty region, where it is still mainly grown. In the 1960s it was little known. But exports, which began in the 1970s, had exceeded 100,000 tonnes by the 1980s and 250,000 by the beginning of the 1990s. Production and exports have been declining since. Small farmers in the Bay of Plenty became millionaires in the good years. The small town of Te Puke (self-described as 'the kiwifruit capital of the world'), at the heart of the industry, became a boom town. But as the area under crop expanded rapidly inside and outside the Bay of Plenty region, and as other countries began to grow the fruit, prices fell. The area under acreage in NZ has declined rapidly over the past ten years, and it is now stabilising as a soundly profitable crop but not spectacularly so. Plantings totalled more than 20,000 ha at one time but had come back to 15,000 by the mid-1990s.

Kiwifruit and other horticultural crops are now competing with dairying for the richest land in

such warm, wet microclimates as the Bay of Plenty and South Auckland. Land under crops is much more productive than land under pasture, and it is also more labour-intensive, no bad thing in a time of unemployment.

AGRICULTURE - The New Era

The character of NZ farming changed dramatically during the second half of the 1980s after a new government decided to deregulate the economy. Farmers had always constituted a powerful lobby in NZ because of the traditional importance of primary production in the national economy and a subsidised support structure had been created over the years. This support had reached absurd levels by the early 1980s with government payments based on stock units which meant, for example, that sheep numbers soared to 72 million during a period when demand for meat and WOOL was at best static and at worst declining. The farming lobby's power had declined during the 1970s and many farmers also realised that if NZ was to clamour for an end to subsidised competition from other countries and for more ready access to foreign markets, it had to get its own house in order. With deregulation, land prices came down to sensible levels and farmers, traditionally an entrepreneurial group in this country, began to use their land and other capital to produce what was best suited to it and what markets wanted.

AGRICULTURE - Future Developments

NZ has traditionally served markets in relatively affluent countries with livestock and this role is likely to continue for some years. Pastoral farming is still the bedrock on which NZ agriculture rests. Wool, however, has suffered from the competition of synthetic fibres and both meat and dairy products have faced difficulty in gaining access to what are mostly protected markets. Allegations that animal fats may help induce heart disease and cancer have resulted in some consumer resistance in recent years to meat and dairy produce. The shift away from butter is a consequence of this but prospects in a huge and growing market in Asia for milk powders and other milk products have pervaded the industry here with renewed confidence.

Once the structure of the meat processing industry, in disarray for some years, has been corrected, meat production and processing is likely to pick up as well.

A trend towards adding value to all primary produce, through further processing of products for specific markets, is developing and should be a big economic winner for NZ in coming decades.

Much of farming's optimism sprang from the 1994 international agreement to apply the principles of GATT to trade in primary production, which should give countries like NZ greater access to the markets of the affluent industrial nations.

Although many forms of manufacturing have grown strongly during the 1990s, the climate and the residual expertise and experience of the nation will ensure that agriculture and silviculture (*see* Forestry) will continue to be the major economic activity. (*See* Dairying, Deer Farming, Pigs and Sheep Farming.)

AGRICULTURE AND FISHERIES, MINISTRY OF

[Introduction](#)

[Development](#)

[Functions](#)

[Research and Advisory Services](#)

AGRICULTURE AND FISHERIES, MINISTRY OF - Introduction

The Ministry of Agriculture and Fisheries now has a role sharply diminished from its traditional position as a powerful and munificent economic supporter of farming and farmers. It is a policy adviser to government on how best to support an environment within which agriculture and fishing can use resources in a productive and competitive way. It also implements policies which fulfil government intentions, and has regulatory arms which help protect NZ from the introduction from other countries of insect pests and plant and animal diseases.

The Department of Agriculture was formed in 1892 to co-ordinate regulatory and advisory services that had developed during the 1870s and 1880s. Pastoral farming on a substantial scale began during the second half of the 1840s and within a decade or two settlement was close enough for the government and many of the settlers to become alarmed at the incidence of animal diseases.

The most serious of these diseases was sheep scab and efforts to contain it were enshrined in a number of provincial and central government laws. Inspectorates associated with these and other protective laws had been attached to the Department of Lands on the abolition of provincial government and the Colonial Secretary's Office.

The new Department of Agriculture was formed under a permanent secretary who was also Chief Inspector of Stock. Consultative services for dairy farmers and fruit-growers were also consolidated within the new department.

The department's main interests were animal diseases, plant diseases and pests (particularly rabbit infestation). Trials of new plant species were made but most of the information disseminated during the early days came from Britain, modified in some cases by experienced advisers. NZ had become sufficiently important as an exporter of agricultural produce by the 1890s for farmers and the government to feel the need for a quality control system. Butter grading began in 1894, cheese in 1898 and meat in 1900, and an agent was appointed in London to examine the condition of produce on its arrival.

AGRICULTURE AND FISHERIES, MINISTRY OF - Development

Ten years after its inauguration, in 1902, the department had more than doubled the initial staff of 74 and it began to take on a modern administrative shape with the formation of eight divisions: veterinary, dairying, biology and horticulture, chemistry, poultry, experimental stations, stock inspectorate and agricultural statistics.

The legislation administered by the department by then included the Rabbit Nuisance Act 1882 and amendments, the Stock Act 1893, the Agricultural and Pastoral Statistics Act 1895, the Orchard and Garden Pests Act 1896, the Dairy Industry Act 1898, the Slaughtering and Inspection Act 1900, the Noxious Weeds Act 1900 and the Flax Grading and Export Act 1901.

In the early part of this century farming was so economically powerful that other industries were regarded merely as appendages. In 1909 when the first Secretary of Agriculture, J D Ritchie, retired, the department was reorganised and became briefly the Department of Agriculture, Commerce and Tourists — Commerce and Tourists being just one of five divisions.

In 1912 the tourists division was detached and the department became vigorously involved in the promotion of more efficient, specialised, scientifically-based farming. This new interest in science was reflected in the appointment as the department's first director-general of a professional man, Dr C J Reakes. In 1920 the commerce division was detached and the Department of Industries and Commerce formed. Immediately before World War Two the first accounts division had been established to help budgeting and financial planning among farmers.

AGRICULTURE AND FISHERIES, MINISTRY OF - Functions

The names and functions of the divisions changed over the years with an increasing emphasis on research and advisory services. The agricultural divisions became: animal health, meat, dairy, advisory services, agricultural research, economics, management services and administration. In 1972 the fisheries research and fisheries management divisions of the Marine Department were transferred to a newly named Ministry of Agriculture and Fisheries. The Port Agricultural Service, attached to the Ministry, has uniformed officers at international seaports and airports to prevent the introduction into NZ of exotic diseases and pests.

```

In the early years the department had a public relations problem because it was predominantly associated with unpopular regulatory and supervisory work in a young country with a rapidly expanding bulk food export business. But gradually the research and advisory services built up.

The first concentrated research of value to pastoral farmers was on pasture species. The Plant Research Station at Palmerston North during the early 1930s completed a national survey of existing pastures and then vigorously selected and bred superior strains. This was despite the fact that the research station existed in a kind of administrative no-man's land between the Department of Agriculture and the Department of Scientific and Industrial Research (DSIR) from the late 1920s until the mid-1930s when it became part of the DSIR. Research into animal husbandry hardly existed until the rapid development of Ruakura Agricultural Research Centre after 1944.

Agricultural research was the major area of scientific research in NZ with the main work done by the Ministry, the DSIR, the NZ Forest Service (NZFS), Massey University, Lincoln University and some of the 12 industry research associations which were funded jointly by the government and the private sectors of the appropriate industries.

The advisory service of the department was given a fillip in 1922 when a field division was set up with staff not burdened by any regulatory function, under the direction of a future director-general, A H Cockayne. Previously, advisory work had been undertaken when other duties permitted.

The enthusiasm for deregulation of the economy and for user-pays that followed the election to office of the Labour government in 1984 led to many changes in the structure of the Ministry of Agriculture and Fisheries which continued for more than a decade. By 1990, five divisions reported to a MAF Corporate Board which in turn reported to the Director-General. The divisions were Policy Services, Corporate Services, Fisheries, Quality Management and Technology. The Corporate Board, whose members were senior ministry executives, was directly responsible for legal, communications, human resources and financial services. The Director-General had his own secretariat and an internal audit team.

The decision was made in 1990 to place research activities (including the Technology Division) outside the ministry, within Crown Research Institutes (CRI), which would also incorporate the Department of Scientific and Industrial Research functions. This changeover was complete by 1992. Farm advisory services were later sold to private enterprise.

In 1995, MAFFish became a separate body to MAF and was renamed the Ministry of Fisheries.

AHURURU, Henare Kepa Te

Henare Kepa Te Ahururu, a constable in the first division of the Armed Constabulary, was the first of four Maori awarded the NZ Cross for helping the settlers during the Land Wars. The award was for conspicuous bravery at Moturoa on 7 November 1868. Not much is known of Ahururu but he later deserted and was living at Ruatoki in 1878. Even though the Order-in-Council setting up the decoration provided for the name of any recipient to be struck from the roll of honour in the event of any 'infamous or disgraceful act', Ahururu's name was left on after his desertion.

}          }
```

Air New Zealand was registered as a limited liability company under the name Tasman Empire Airways Ltd (TEAL) in 1940, with NZ holding a 50 per cent cancel interest, Australia 30 per cent and Britain 20 per cent. The first aircraft were two S-30 Empire-class flyingboats [19 seats, 138 mph (222 kph)]. The inaugural service (starting 30 April 1940) was Auckland/Sydney/Auckland once a week. The airline replaced the Empires with Sandringham flyingboats [30 seats, 172 mph (277 kph)] and Solents [45 seats, 200 mph (322 kph)] on routes across the Tasman Sea and round the South Pacific Islands until the last Solent was retired in September 1960.

The company was reorganised in 1953 with NZ and Australia becoming the only shareholders, with a 50 per cent holding each. In 1954 the company took delivery of its first land-based aircraft, three Douglas Aircraft Corporation DC-6s [56 seats, 265 mph (426 kph)], and in 1959 began replacing these with Lockheed jet-prop Electras [71 seats, 400 mph (644 kph)]. Two years later, close to the airline's 21st birthday, the NZ government bought out the Australian interest and became the sole owner.

In 1965 the first three DC-8 Series 52 jets arrived [129 seats, 575 mph (926 kph)], the company's name was changed to Air New Zealand, and in December a North American service was inaugurated with a DC-8 flight from Auckland via Nandi and Honolulu to Los Angeles. Air New Zealand took delivery of its first three DC-10s during 1973 and 1974 [247 seats, 600 mph (966 kph)] and its first three Boeing 747s in 1981 [420 seats, 600 mph (966 kph)]. Air New Zealand services fanned out round the Pacific basin during the late 1970s until by the early 1980s it was flying scheduled services to major airports in Australia and the South Pacific Islands, to Hong Kong, Singapore, North America and Britain.

The airline was merged with the National Airways Corporation (NAC) in 1978 which put the international and major domestic services under one management. The airline has operated profitably for 36 of its 46 years of existence. Four loss years came when new flying boats came into service after World War Two. After over 30 years of profitability, there were four more financially bad years, before a reorganised management structure restored profitability in 1984.

Privatised In April 1989 the Government sold Air New Zealand to a consortium headed by Brierley Investments Ltd, retaining one 'Kiwi' share to maintain a voice in ownership matters and to protect the country's bilateral agreements. Initial share-holdings were BIL 65 per cent with 30 per cent to be onsold to the NZ public and institutional investors; Qantas 19.9 per cent, Japan Airlines 7.5 per cent and American Airlines 7.5 per cent. The company was listed for the first time on the NZ Stock Exchange in October 1989, and has generally reported solid profits since.

In the mid-1990s, the company had a fleet of four 747-400s, four 747-200s, five 767-300ERs (249 seats, 850 kph), six 767-200ERs (209 seats, 850 kph), 14 737-200s (113 seats, 790 kph) serving international and domestic routes, as well as SAAB340 (33 seats, 430 kph), Embraer Bandeirante (15 seats, 414 kph) and Fairchild Metroliner aircraft (19 seats, 465 kph) operated by domestic subsidiaries Eagle Air and Air Nelson.

AIRWAYS CORPORATION

Airways Corporation of NZ Limited is a state-owned enterprise established in 1987 to manage and control NZ airspace and also a large area of the Pacific region as assigned to it by the International Civil Aviation Organisation (ICAO). The corporation provides air traffic control services for all civil and military aircraft as well as all the navigational facilities to make this possible. Meteorological services and other information critical to safety in the air is supplied free of charge. Revenue comes from payments by aircraft operators and pilots for the services they use, including radar control, landing charges and for aeronautical charts and official publications. The corporation has gradually upgraded air traffic control technology and has an investment programme in order to keep abreast of rapidly developing systems. Its functions were previously administered by the Civil Aviation Division of the Ministry of Transport.

AKARANA

Akarana is based on the original Maori pronunciation of Auckland, and has been adopted by such organisations as the Royal Akarana Yacht Club.

Akaroa is a township on the shore of French Bay inside Akaroa Harbour, surrounded by Akaroa County, on Banks Peninsula. It was settled in 1840 by French colonists sponsored by the Nanto-Bordelaise Company in France. Captain Jean Langlois, a French whaler, negotiated the purchase of 30,000 acres (12,150 ha) of Banks Peninsula from a group of Maori in 1838, and returned to France to form the Nanto-Bordelaise Company and get French government support to colonise NZ. The settlement was renamed Port Louis Philippe and Captain Lavaud was despatched as an agent of the king in the corvette *L'Aube*. Langlois and 80 colonists followed in the *Comte de Paris* arriving on 17 August 1840. In the meantime Governor Hobson had declared British sovereignty on behalf of Queen Victoria, and hearing of the French intention despatched HMS *Britomart* with two magistrates aboard to Akaroa. There was a long drawn-out dispute about the title to the land the French thought they had bought, but otherwise the settlement existed amicably with neighbouring settlements and nowadays there are only superficial reminders of the town's French origins — the word 'rue', for example, being used on street signs. Although the British comfortably headed off any annexation attempt by the colonists of the Nanto-Bordelaise Company, the French interest in NZ during the late 1830s had been one element considered by Britain when deciding to intervene in NZ. Akaroa is South Island Maori dialect for 'long harbour', the equivalent to Whangaroa in the North Island.

Alamein (also El Alamein), Egypt, is the site of one of the decisive battles of World War Two, in which the British Eighth Army under the command of General Sir Bernard Montgomery defeated German and Italian forces under Field Marshal Erwin Rommel and began the drive which eventually forced the Germans out of North Africa. The NZ Division played a key part, making the initial attack on the night of 23 October 1942 and, reinforced by two British infantry brigades and an armoured brigade, the division made the final decisive breakthrough on 2 November.

ALBATROSSES

```

Albatrosses are the largest members of the petrel family. The wandering albatross (*Diomedea exulans*) and royal albatross (*D. epomophora*) are among the largest of all flying birds with a body length varying from 75 cm to 125 cm. These two birds remain in the southern hemisphere. Some of the other species of albatross move into the northern hemisphere but only in the Pacific region.

The various species that visit NZ are light-mantled sooty albatross (*Phoebetria palpebrata*), Chatham Island mollymawk (*Diomedea eremita*), grey-backed Bounty Island mollymawk (*D. salvini*), shy (white-capped) mollymawk (*D. cauta*), Buller's mollymawk (*D. bulleri*), black-browed mollymawk (*D. melanophris*), grey-headed mollymawk (*D. chrysostoma*), yellow-nosed mollymawk (*D. chlororhynchus*).

The royal albatross breeds only on Otago Peninsula. The other species of albatross breed on Campbell Island, Antipodes Island, the Chatham Islands, the Auckland Islands, Macquarie Island and the Bounty Islands.

```

Albertlanders was the name given to members of a colonisation group which settled at Port Albert, on Kaipara Harbour, north of Auckland, in late 1862 and during 1863.

William Rawson Brame, an English journalist, conceived the idea of a Nonconformist settlement in NZ as a bi-centenary celebration of the expulsion from the Church of England of the non-conformists. He formed the Albertland Christian Colonisation Movement, named after Queen Victoria's Consort, Prince Albert. Land for the settlement was bought at Oruawharo, on the Kaipara, and about 3,000 settlers joined the movement. The Albertland scheme failed because of the poor quality of much of the land, lack of transport into the area with inadequate roading and tidal harbour, and because of dissension among the colonists themselves, mostly concerning the disposal of the township sections which Brame claimed was his right.

Relics of the settlement in the Port Albert area are the Albertland Museum, and the Minniesdale Chapel built in 1867 for colonists remaining there.

Surrounding Port Albert today is farmland, some orchards, a limeworks and some sawmilling.

ALBRECHT, Gretchen

Gretchen Albrecht (1943–) was born in Auckland, attended the Auckland University School of Fine Arts, gaining a diploma with honours in 1964. During 1972–73 she returned to the school as a teaching fellow in painting and then painted full time. She was the Frances Hodgkins Fellow at Dunedin in 1981, and has travelled in Europe, the US and Australia. She has had many solo exhibitions, been represented in several important touring shows, and has undertaken commissions. She lives in Auckland.

ALCOHOLIC LIQUOR

(see Liquor Licensing)

ALDRED, John

John Aldred (1818–94) was born in Suffolk, ordained in the Wesleyan ministry at Bristol in 1839, arrived at Hokianga in 1840 and later that same year became the first resident Wesleyan minister at Wellington. In 1842 he was the first clergyman to visit the Chatham Islands. He established Wesleyan congregations in several parts of NZ and in the 1860s travelled widely throughout the Central Otago goldfields as a missionary.

ALEXANDER TURNBULL LIBRARY

```

}
```

Alexander Turnbull Library is an historic library within the National Library of NZ. It is based on the collection of 55,000 volumes bequeathed to the nation by Alexander Horsburgh Turnbull on his death in 1918.

Turnbull was born in Wellington in 1868, educated locally and at Dulwich College in England, and worked in the London office of his father's firm, W & G Turnbull, General Merchants, until the family returned to live in NZ in 1892. Turnbull began collecting books at the age of 17 and as his wealth increased he further indulged his hobby. For some years he also collected Maori artefacts and coins but donated these to the Dominion Museum in 1913 to make room for his books. In 1916 he moved into a brick house in Bowen Street, Wellington, near the Cenotaph, and after he died, the government bought the house from the estate so that the books he had bequeathed to the nation could remain there. The library was opened to the public in June 1920 and was taken over by the National Library of NZ by act of parliament in 1965. The brick building, although still occupied, was considered unsuitable for further use as the library, so the \$200 million collection was moved to temporary premises for a decade before being transferred to the new National Library building in Molesworth St in 1987.

Turnbull's original collection centred on NZ, the Pacific and Antarctica, with special emphasis on James Cook, and on 17th-century English literature, with a John Milton collection which is internationally known. The Alexander Turnbull Library now has more than a quarter of a million volumes, as well as thousands of manuscripts, maps, original paintings and drawings, and the best collection of historic photographic prints and negatives in the country (about 600,000), as well as thousands of reels of microfilm.

Alexandra, a town in Central Otago, about 200 km north-west of Dunedin, with a population of about 4,500, is the centre of a sheepfarming and stone fruits district. It was named after Princess Alexandra of Denmark who married Britain's Prince of Wales (later Edward VII) in 1863, the year the town was established.

```

Alfonsino (*Beryx splendens*) is a slender fish, 30–50 cm long, weighing 1–1.5 kg, and is brightly coloured with a brilliant scarlet back, red flanks touched with silver, and bright red fins. This fish is common around NZ at depths from 200 to 800 m and is caught mainly by trawling. Catches are exported, mostly to Japan.

ALGAE

```
{ewc
MVIMG,
MVIMAGE,
[HOTMACR

"A0510PG",
TOPIC")] !
a0510pas.dib
}
```

Algae is the general term for the groups of photosynthetic plants that lack the defined plant body and organisation of higher plants and are therefore sometimes called thallophytes.

The best known groups are the green, red and brown algae, with the larger species familiar to all as the seaweeds of the coastline. Several groups have mostly microscopic members and one of these, the diatoms, has a skeleton (frustule) of silica; their fossil deposits are mined commercially as diatomaceous earth.

As well as their immense importance as the basis of marine and freshwater food chains, many algae are of specific commercial value in providing such products as algin, agar and carrageen which are used in a wide range of food products. There is some harvesting of seaweed for agar in New Zealand.

Algae populations may peak sometimes when conditions are especially favourable to them and provide algal blooms which can change the colour of large areas of oceans and lakes.

Because they are extremely widespread and adaptable, algae are found in almost all forms of habitat. The patches of green and orange in thermal pools and the orange felts on old telegraph poles are examples of algal colonies.

ALL BLACKS

```
{ewc
MVIMG,
MVIMAGE,
[HOTMACR
O=MVJump(
"A0520PG",
TOPIC")] !
a0520pas.dib
}
```

All Blacks was the name given to the NZ touring rugby team in Britain in 1905 and it stuck. The first NZ team to go overseas (to Australia in 1884) wore dark-blue jerseys with a gold fernleaf on the left breast, dark-coloured knickerbockers and stockings. From 1893 to the end of the century NZ teams wore black jerseys with a silver fernleaf but white shorts. From 1901 the playing uniform was all black with a silver fernleaf, but the name, 'All Blacks', was not used until the 1905 team toured Britain. The inspiration for the soubriquet would seem to be self-evident, but according to one member of the team, W J Wallace, the name is derived from a printer's error. The 'l' was dropped in by mistake when a journalist referred to the team as being so fast that they were 'all backs'.

James Allen (1855–1942) was born in Adelaide, South Australia, educated at St John's College, Cambridge, and the Royal School of Mines, before settling in Dunedin where his father had invested in real estate. Allen became Minister of Defence, Finance and Education in the first Reform government of 1912 and, during the absence of Massey and Ward at the Imperial Conferences of 1917 and 1918 and the Peace Conference of 1919, he was acting Prime Minister. He resigned his seat in 1920 on appointment as NZ High Commissioner in London where he served for two terms.

He was later to be appointed to the Legislative Council.

Stella Henderson Allen (1870–1962) was a pioneer law graduate and an ardent champion of women's rights. The sister of Christina Henderson and Elizabeth McCombs, she won a scholarship to Christchurch Girls' High School at the age of 12. After gaining honours in political science and an MA in Latin and English, she entered law school and completed an LLB degree. This led to her campaign for the removal of obstacles against women in the legal profession.

In 1905, Allen became a parliamentary correspondent, one of the first women to do so.

Rewi Alley (1897–1989) was born in Springfield, Canterbury, won the Military Medal in World War One and, after farming near Waverley from 1920–26, walked off the land and a few months later sailed for China as radio operator on a tramp steamer. He worked at first for the Shanghai Municipal Council as a fire brigade and factory inspector and began agitating for better conditions in the city. Alley continued to live in China and was famous for his industrial co-operatives. He never married but adopted two Chinese sons. He published dozens of books of poetry.

One of his brothers, **Geoffrey Alley**, was an All Black in 1926 and 1928, and was National Librarian from 1964–67. He was author of a NZ Centennial publication with D O W Hall, *The Farmer in New Zealand*. Another brother, **Philip Alley**, became an outstanding engineer. A sister, **Joyce Alley**, was for many years an instructor at the Post-Graduate School for Nurses in Wellington.

ALLIANCE

Alliance is a political coalition party formed in December 1991 by the Democratic Party, the Green Party, New Labour and Manu Motuhake. (See Anderton, Jim.)

Sir John Andrew Charles Allum (1889–1972) was a pervasive influence in Auckland politics for 40 years and a driving force behind the campaign to have the Auckland Harbour Bridge built.

Allum was born and educated in London, emigrated to NZ as a young man and in 1922 founded the Allum Electrical Co in Auckland. He served on the Auckland City Council from 1920–29 and again from 1938–41 when he was deputy mayor. He was Mayor of Auckland from 1941–53.

Allum served for 30 years as Auckland Employers' Association president and he was associated with a large number of other commercial, educational, cultural and charitable organisations. He will be remembered mainly for his unremitting campaign over many years to have the bridge built over Waitemata Harbour.

ALPERS, Antony Francis George

Antony Francis George Alpers (1919–) was born in Christchurch, the son of Supreme Court judge O T J Alpers. He worked as a journalist and a publishing editor in NZ (except for a period in England from 1947 to 1951) until 1966. He then joined the staff of the English department at Queen's University in Kingston, Ontario, Canada, and became associate professor of English. Alpers wrote the first definitive biography of short-story writer Katherine Mansfield (published in 1953). His revised and expanded Mansfield biography issued in 1980 was virtually a separate work. Other books include *Dolphins* (1960), *Maori Myths* (1964), *Legends of the South Sea* (1970) and *Confident Tomorrows* (1992).

```

America's Cup, yachting's major international trophy, was won by NZ for the first time in 1995 after several impressive attempts which had, however, stalled late in each contest. The cup was held by the New York Yacht Club for more than a century before an Australian entry won it from the US boat skippered by Dennis Connor in the mid-1980s and took it back to Perth. A NZ bid, led by merchant banker Sir Michael Fay, on behalf of the tiny Mercury Bay Boating Club, took part in the elimination series in Perth and performed well until near the end when they were knocked out of the competition by Australia which was in turn beaten by the San Diego Yacht Club entry skippered by Connor. NZ challenged the San Diego club head to head in 1988 but lost, and lost again in 1992 in the final of the elimination series, going down to the Italian boat. The Americans, again led by Connor, retained the America's Cup against the Italians.

A 'Team New Zealand' campaign was mounted to sail for the cup in 1995. The Royal New Zealand Yacht Squadron's 'Black Magic' boat, with world match-racing champion Russell Coutts at the helm and round-the-world race victor Sir Peter Blake in charge of the campaign, lost only one race in the Louis Vuitton Cup sail-off series to find the challenger, and then won the America's Cup easily, five-nil. Peter Blake was not on board when 'Black Magic' lost its only preliminary race, against Australia, and the absence of his lucky red socks was blamed for the defeat. In one of the most successful promotions ever staged in NZ, red socks were sold for \$10 a pair with the profit going to the 'Team New Zealand' campaign. Over the few days during which the final was sailed, hundreds of thousands of NZers throughout the country sported red socks to show their support for their sailors.

AMON, Christopher

```

Christopher Amon (1943–) was the third of a trio of MZ ‘Formula One’ grand prix drivers who were among the best in the world during the 1960s. The other two were Denis Hulme, the only one to win the world drivers’ Formula One championship (in 1967) and Bruce McLaren who died in an accident in 1970.

Amon was still a teenager when he established himself as one of the top drivers in NZ and at 19 was competing on the International Grand Prix circuit. His most successful year was 1967, when he was third in four of the grand prix — the Belgian, Monaco, British and German races. Also that year, he returned home to win the NZ Grand Prix. In sports car racing he won the 24–hour Le Mans in France in 1966, and the Daytona 24–hour event in the US in 1967. He came home again to win the NZ Grand Prix in 1968.

Amon retired from Formula One racing in 1974 and during the rest of the 1970s worked as a test driver in Europe and the United States.

In 1980 he began farming in NZ. He has also been involved in television acting and has appeared in a number of commercials.

AMPHIBIA

(see Frogs)

AMURI

Amuri is a region within Nelson Province. The name is a corruption of the Maori word, haumuri, meaning 'north wind' in some districts, 'east wind' in others. Amuri Bluff is near the mouth of the Conway River in Marlborough.

Amuri is also the name of a variety of an early-maturing oat bred by the Crop Research Division of the DSIR, specifically for early green feed production in North Canterbury, and released in 1967.

Anakiwa, 11 km by launch and 24 km by road from Picton in Queen Charlotte Sound, Marlborough, is the site of the Cobham Outward Bound School, opened by Lord Cobham, then the Governor-General, on 1 September 1962. Anakiwa means literally ‘the cave of Kiwa’ (a Maori god).

ANAU AKO PASIFIKA

Anau Ako Pasifika provides tutors to work with Pacific Island families in their homes in a bid to improve nutrition, general health and parenting skills. The tutors visit families to discuss issues concerning childcare, health and education. The development of the project, which began operating in Auckland, Wellington and Tokoroa, involved the former Department of Education, the Pacific Island Polynesian Education Foundation and the Pacific Women's Council. 'Anau' is a Cook Island word for family, 'aku' a Niuean and Tongan word for learning and 'Pasifika' means the Pacific Island way.

Anchovy (*Engraulis australis*) is a small, herring-like fish, 8 to 12 cm long and characterised by an undershot jaw. It is a pale silver-green above and silver-white below. Anchovies are common in surface waters all round the North Island and on the north and west of the South Island, forming dense schools, particularly during the spring and summer spawning season. An important food for foraging species, anchovies are used as bait for longline and pole and live bait fisheries.

Johannes Carl Andersen (1873–1962) was born in Denmark, arrived in Christchurch with his family at the age of two, and became the first librarian at the Alexander Turnbull Library in 1918, a post he held till his retirement in 1937. Andersen was a noted scholar, writer and lecturer on literature, Maori life, bird song, and many aspects of NZ history and geography. He either wrote or contributed to 20 books.

ANDERSON, Barbara

Barbara Anderson (1926–) was born in Hastings, educated at Otago University, became a medical technician and secondary school teacher and her first book of fiction, short stories entitled *I Think We Should Go into the Jungle*, was resoundingly received by critics when it was published in 1989. She won the Goodman Fielder Wattie Book of the Year award in 1992 with the novel, *Portrait of the Artist's Wife*.

ANDERSON, John

John Anderson (1820–97) was born in Scotland, served an apprenticeship as a blacksmith, and worked in Edinburgh and Liverpool before sailing for Christchurch where he arrived in 1850 with his wife and one son. He set up a foundry in Christchurch and, with the help of his two sons (both sent home to Scotland for training as engineers), established a firm that built ploughs, boilers, engines, bridges, dredges and even railways (Rakaia-Ashburton, Te Kuiti-Mokau River) and viaducts (Makatote and Mangatera).

Anderson became the first mayor of Christchurch in 1868, and was so popular a figure that before he left for a visit to Britain in 1875, the citizens of the city presented him with a sum of money to have his portrait painted by Britain's leading artist of the day, A Glasgow. He was a founder of the NZ Shipping Company and an original director of the *Christchurch Press*.

ANDERSON, Mona

Mona Anderson (1910–) was born in Christchurch and wrote *A River Rules My Life*, which became a best seller in 1963, a fecund time for NZ writing. It has seldom been out of print. Among her work since are: *The Good Logs of Algidus* (1965), *Over the River* (1966), *The Water Joey* (1976), and *Home is the High Country* (1979).

ANDERTON, James Patrick (Jim)

James Patrick (Jim) Anderton (1938–) was a longtime member of the NZ Labour Party, who became a fulltime fund-raiser in 1976, a national executive member in 1978, president 1979–84, MP for Sydenham 1984–89, and then broke away to form New Labour after steadily opposing what he considered were policies too far to the right. He then helped form a coalition of disparate political groups and weld them into a force called the Alliance that beat the Labour Party and went close to ousting National in a 1994 byelection for Selwyn. Easily the most popular and successful politician from outside the two main parties since World War Two, Anderton then shocked the country by resigning as head of the Alliance at the end 1994 and announcing he would retire from parliament at the following election for personal reasons.

He was succeeded as Alliance leader by able but relatively inexperienced Sandra Lee. Within six months the party had diminished in influence and popularity, and, in May 1995, Anderton again surprised the country by announcing his return to the Alliance leadership, with the acquiescence of Lee.

Anderton began working life as a teacher, became a child welfare officer and a fulltime organiser within the Catholic Church, before entering business and founding a light engineering company, with his brother, in Auckland, and working as sales manager and then managing director. He was elected to the Manukau City Council (1965–68), the Auckland City Council (1974–77) and the Auckland Regional Authority (1977–80), and was twice unsuccessful in campaigns for the Auckland mayoralty. At the height of the Alliance power, Anderton was consistently the most popular politician in the country according to public opinion polls.

```
{ewc
MVIMG,
MVIMAGE,
[HOTMACR
O=MVJump(
"A0720PG",
TOPIC")] !
a0720pas.dib
}
```

George French Angas (1822–86) sketched and painted some of the earliest illustrations of NZ life, mostly round the Taupo region. Many of these illustrations appeared in *The NZers Illustrated* and *Savage Life and Scenes in Australia and NZ*, both published in 1847. Angas was born at Newcastle-on-Tyne, studied lithography and painting under natural history painter, Waterhouse Hawkins, and sketched Mediterranean landscapes before travelling to South Australia where he met Governor George Grey and accompanied him on some of his explorations. He was aged 22 when he arrived first in NZ and spent three months exploring the central North Island. His attitude towards the Maori was overly sentimental, highly romanticised, as is reflected in his portraiture, but his representations of Maori carvings, artefacts, canoes, villages and fortifications are regarded as accurate. He was an enthusiastic amateur scientist and for seven years from 1853 was secretary to the Museum of Australia in Sydney.

ANGLICAN CHURCH

}
```

Anglican Church (Church of England) has the highest professed membership of any religious denomination in NZ. It hovered around 900,000 or about one-third of the population for many years, until the close of the 1970s when it dropped to about 800,000. Numbers had declined to 730,000 by the mid-1990s. Clergy number about 500 and parishes and pastorates 350.

The Anglican Church made its first appearance in 1814, with the arrival of the Rev Samuel Marsden at the Bay of Islands, where he preached the first sermon in the country on Christmas Day. The Bishop of Australia, Bishop Broughton, arrived in the Bay of Islands for a visit in 1838 and held confirmations in both English and Maori. The Anglican Church became officially established in NZ after the proclamation of British sovereignty which enabled the appointment of a Bishop of NZ by Royal Letters Patent — George Augustus Selwyn in 1841.

For the first four decades of the nineteenth century, the Church in NZ was a Maori Church. Founded by the Church Missionary Society, it was the only Church of England presence until the bishopric of NZ was offered to Selwyn in 1841. The Anglican Church in NZ became autonomous in 1857 with the establishment of its own constitution.

A revised constitution (1991) provided for a church of three tikanga — cultural streams — in which Pakeha, Maori and Polynesian Anglicans have an equal partnership in church structures and practice.

The seven NZ dioceses are Auckland, Waikato, Waiapu, Wellington, Christchurch, Nelson and Dunedin; the Bishopric of Aotearoa has full responsibility for Maori Anglican affairs, and has four bishops in regions of Aotearoa. The Diocese of Polynesia, a former missionary diocese, became an equal partner with the NZ dioceses in 1990.

The governing body of the church is the General Synod/Te Hinota Whanui. It meets normally every two years. This body elects the Primate (Archbishop). Diocesan bishops are elected by the diocesan synods. All synods meet as representatives of the three houses of laity, clergy and bishops.

The church is in full communion with the Archbishop of Canterbury and 28 other provinces of the Anglican Communion.

ANGUS

}
```

Angus is the most popular beef cattle breed in NZ, representing about 75 per cent of the total national herd. It is a black, polled, stocky animal from north-eastern Scotland, noted for its early maturity and hardiness in rough country and variable weather. Aberdeen Angus, as they were known at the time, were the third most numerous breed immediately after World War One (behind Hereford and Shorthorn), but caught up during the 1930s and 1940s, and by 1950 outnumbered the other two breeds combined.

The first Angus were imported in 1863 and early herds were built up in Southland and North Otago. The NZ Aberdeen Angus Cattle Breeders' Association was formed in Hastings in 1918, and the name of the breed and the association was changed to simply Angus in 1969. Bulls from this country have been exported round the world.

ANGUS, Rita

Rita Angus (1908–70) was born in Hastings and studied painting at the Canterbury School of Art in Christchurch, and for a short time at Elam. Together with Wollaston and McCahon she helped give NZ painting a sense of its own direction during the 1930s and 1940s, although she is quoted as saying in 1947 that she hoped with her work ‘to sow some seeds for possible maturity in later generations. I am colonial, several generations, and for me NZ is, in essence, medieval’. In landscapes she tried to capture the distinctive colour of NZ with its hard light, and she strove for a truly indigenous feel in her portraits of both Maori and European NZers.

ANNIVERSARY DAYS

Anniversary Days, which are statutory holidays, fall as follows in each provincial district: Wellington, 24 January; Auckland and Northland, 29 January; Nelson, 31 January; Otago and Southland, 20 March; Taranaki, 14 March; Hawke's Bay, 21 October; Marlborough, 31 October; Westland, varies but usually 1 December; Canterbury, 11 November; the Chatham Islands, 28 November. The holiday is adjusted to meet certain circumstances: in some cases it is held on other dates to match a local show day or other event; in Taranaki it is held on the second Monday each March to avoid any clash with Easter Monday; and in the other provincial regions it is observed on the preceding Monday where it falls early in the week, and the succeeding Monday where it falls on the Friday or the weekend.

Ansett NZ first entered the domestic aviation market with scheduled services on trunk routes in July 1987, and for the first time in decades two primary carriers were competing head-on. The affect on the NZ traveller was immediate and beneficial. Ansett built its own modern terminals at major destinations, including frequent flyer facilities, and forced Air New Zealand to rebuild or upgrade its own facilities. Inflight meals were introduced and became standard on all flights. Ansett introduced an inflight bar service in 1990.

At first the company was half-owned by Ansett Australia with the other shareholding by Brierleys and Newmans. Ansett Australia took over full ownership in February 1988.

The airline flew Dash-8s and 737s (100s and 200s) in the beginning but now serves its 14 destinations with nine BAe 146 'Whisper Jets' (90 seats, 780 kph) and two Dash-8s (40 seats, 460 kph). In association with feeder carriers flying under the Tranzair banner, Ansett carried 1.9 million passengers in 1994. The company employs just over 1,000 staff nationwide.

Exploration

Antarctic Treaty

Climate

Antarctica has been closely associated with NZ ever since Captain Cook, early in the 1770s, sailed south to investigate the existence of a legendary southern continent. He sailed along 60° S Lat. and penetrated as low as 71° S without sighting any land mass. The first known sighting was by Fabian Gottlieb von Bellingshausen in 1819. James Clark Ross sighted the Great Ice Barrier, Victoria Land, Ross Island and McMurdo Sound in 1840. NZer Alexander von Tunzelmann was probably the first person ever to step on to the continent, at Cape Adare, on 24 January 1895.

Exploration on the land began at the end of last century. NZers were involved in major expeditions led by Englishmen Captain Robert Falcon Scott (1901–04) and Sir Ernest Shackleton (1913–16) and Australian Sir Douglas Mawson (1911–14).

In 1923 a British Order-in-Council claimed all islands and territories lying between 160° E Long and 150°W Long. and south of 60° S Lat, proclaimed them a British settlement called the 'Ross Dependency', and placed it under the administrative authority of the Governor General of NZ.

A British-Australian-NZ Antarctic Research Expedition in 1929–31 and exploration of the Antarctic from the air by American Admiral Byrd excited interest and the NZ Antarctic Society was formed in 1933. NZ has had bases on the continent since 1957, first near Cape Adare and since 1964 at Scott Base, in McMurdo Sound.

A group of five NZers under the leadership of Sir Edmund Hillary travelled overland by tractor to the South Pole in conjunction with a transpolar expedition led by Britain's Dr Vivian Fuchs (later Sir Vivian) during an International Geophysical Year in 1957–58. Hillary was to lay supply bases for the Fuchs party coming from the far side of the continent but because they were well ahead of their schedule they pressed on to the Pole, a controversial move at the time, but the first overland visit to the Pole since Scott's, almost half a century before.

Since 1956 NZ has maintained a permanent base at Scott Base and the leader is vested with the powers of Justice of the Peace and Coroner, has jurisdiction over all NZ nationals in the region and is responsible for the carrying out the scientific research programme. NZ parties wintering over since 1958 have explored and mapped huge areas of the Ross Dependency, under the aegis of the Antarctic Division of the DSIR, set up in 1959, until 1992 when the NZ Antarctic Programme was taken over by the Ministry of Foreign Affairs and Trade.

ANTARCTICA - Antarctic Treaty

Antarctic Treaty — ensuring the use of Antarctica for peaceful purposes only and the continuance of international harmony and promoting freedom of scientific investigation and exchange of information — was signed in 1959 by 12 nations: NZ, Argentina, Australia, Belgium, Chile, France, Japan, Norway, South Africa, Russia, Britain and the US. Poland joined the treaty in 1977, and signatories numbered 40 by the mid-1990s. Treaty parties have, since 1980, signed a convention for the protection and proper exploitation of Antarctic marine living resources. The treaty provisions are enforced on NZers by the Antarctic Amendment Act 1970.

In October 1991 NZ and most other nations involved signed a Protocol to the Antarctic Treaty on Environmental Protection which aimed to ban mining for at least 50 years and imposed environmental protection restrictions on all other human activity in Antarctica.

ANTARCTICA - Climate

Scott Base (78° S) is only a few kilometres from the American base, McMurdo, on the western side of Ross Island. Summer temperatures at Scott Base are generally around freezing-point but extremely low humidity makes this less oppressive than mid-winter in some countries with continental climates. Low humidity results in low rainfall, about 17 cm a year. Winter temperatures drop as low as -27°C. Blizzards driven by 100-knot winds and the winter darkness severely limit outside activity in winter.

ANTIPODES

Antipodes are a small group of islands located at Lat 49°41' S, Long 178°43' E, directly opposite England on the globe, hence the name defined by the *Heinemann NZ Dictionary* as 'any two points directly opposite each other on a globe, such as the North and South Poles.' The Antipodes Islands are 800 km south-east of Stewart Island, bleak, windswept, with little vegetation. NZ and Australia are often collectively called the Antipodes because they are in the general region opposite England on the globe.

Ants in NZ belong to 33 species, 10 of which are regarded as native to this country. Five of the other species also occur in Australia and it is not known whether they are here because of accidental introductions or were native to both countries. The remaining 18 species are of either African or Asian origin and have been introduced since European settlement.

The best known and probably least loved ant is the whitefooted house ant (*Technomyrmex albipes*), an exotic species which is widespread throughout the country and invades houses in search of food, mainly sweet substances. It is about 3 mm long, and it nests in the ground or in rotting wooden piles and occasionally in the timber framing of a house. Another exotic house-invading species found mainly in North Island urban areas is Pharaoh's ant (*Monomorium pharaonis*), which is smaller than the whitefooted house ant. The oriental ant (*M. orientale*), smaller still, is found in the Auckland region only.

The southern ant (*Chelaner antarcticus*) is the most common of the indigenous species, found both in the bush and in open country, nesting in rotting logs or undergrowth, or even down as deep as 40 cm in the ground. It measures 3 to 4 mm, and is black but often with an orange tint. Slightly bigger is the striated ant (*Huberia striata*) which has much the same habitat as the southern ant and ranges from amber to black.

Another native ant, *Mesoponera castanea*, is reddish in colour, is found in both country and urban areas and is armed with a sharp sting.

}
```

ANZAC is an acronym for the Australian and NZ Army Corps which was formed in Egypt from the Australian and NZ Division immediately before the landing on Gallipoli in World War One. At first the name was abbreviated to A and NZAC. but was quickly cut down to the single word, Anzac. Two men later claimed the distinction of first coining the word — the Anzac commander in Egypt, General Birdwood, and the campaign commander-in-chief, General Sir Ian Hamilton. 25 April 1915, the day on which the corps landed in what came to be known as Anzac Cove, on Turkish-held Gallipoli, is still observed as a public holiday on which NZers honour the dedication and gallantry of their soldiers in all the nation's wars. The word 'Anzac' is still frequently used to describe any combined Australian and NZ endeavour.

ANZUS PACT

ANZUS Pact is a tripartite security treaty signed by Australia, NZ and the US on 29 April 1952. It came under threat after the NZ Labour government in 1984 decided to ban all nuclear-powered or nuclear-armed vessels from NZ ports. The US government responded by claiming that treaty partners could not fulfil their obligations if one party did not allow full co-operation among the armed forces of the three nations, including the deployment of nuclear arms. Anzus exercises, meetings and intelligence arrangements involving NZ were cancelled as a result.

ANZ BANKING GROUP (NZ) LTD

ANZ Banking Group (NZ) Ltd is one of the largest listed companies, with antecedents which go back to 1835 in Australia and 1840 in NZ.

The Union Bank of Australia opened its first NZ branch at Petone (then called Britannia) at the time of the original settlement, in 1840. Between 1842 and 1856, Union branches were opened at Nelson, Auckland, Lyttelton, Dunedin and Christchurch.

In 1951, the Union Bank of Australia and the Bank of Australasia (formed in 1835 under a charter from King William IV) merged and became the Australia and NZ Bank Ltd. In 1970, the company merged with the English, Scottish and Australian Bank, in Australia, and the Australia and NZ Banking Group Ltd was formed, still with its headquarters in London. The domicile was changed to Melbourne in 1976.

ANZ Banking Group (NZ) Ltd bought Postbank (formerly the Post Office Savings Bank) from the government after it was split from the Post Office which was corporatised as New Zealand Post. Other ANZ subsidiaries or associated companies include the UDC Group, Allied Mortgage Guarantee Co, Databank Systems Ltd and New Zealand Bankcard Associates Ltd.

Aorere Valley is a 5-km wide valley extending inland from Collingwood, Nelson, that has been filled to a considerable depth by river gravels and sands and young rocks. The foundation (or geological 'basement') of the valley is composed of hard old rocks and these also form the hills to the south-east. About 350 to 300 million years ago, and again about 120–100 million years ago, granites were intruded into the Ordovician and other rocks. The heat emanating from the granites altered many of the rocks, to form metamorphic rocks. Intrusion of the granites was also accompanied by widespread mineralisation, with the formation of silver, gold, copper, zinc, lead, iron, nickel and tungsten in many areas of north-west Nelson. Mineralisation of the Ordovician rocks is the source of much of the alluvial gold found in many of the streams flowing out of inland Golden Bay. The Collingwood goldfield was discovered in 1856.

AOTEA

Aotea was one of the great ocean-going canoes in which, according to Maori mythology, a wave of Maori settlers arrived from Hawaiki around the middle of the 14th century (*see Maori Canoe Traditions*). The Maori tribes all trace their ancestry back to one of these canoes.

Aotea means literally 'white cloud'. It is the Maori name for Great Barrier Island and for a settlement on the shore of Aotea Harbour, an inlet about 10 km north of Kawhia Harbour, where the canoe is said to have arrived after its journey from eastern Polynesia.

A variety of wheat developed in NZ was named Aotea and at its peak, at the beginning of the 1960s, it represented 80 per cent of the national crop. It remained the most popular variety throughout the 1960s but has since succumbed to the rise of new types.

AOTEAROA

Aotearoa is the Maori name for NZ, although originally it was used only for the North Island. It is commonly accepted to mean 'Land of the Long White Cloud' and its origin is attributed to Hine-te-Taparangi, wife of the legendary Maori navigator, Kupe. She is said to have called out 'He, ao!' ('A cloud!') on sighting land at the time of first arriving here and Kupe decided to enshrine this declaration in the name of the new land. Other interpretations of the meaning are 'long white world', 'long bright world' and 'long lingering daylight'.

APEC

APEC, an acronym for Asia Pacific Economic Co-operation, which met for the first time in 1989 in Australia, is a forum for countries in the region to promote regional growth through economic integration and policy co-ordination. The countries attending the first meeting were: NZ, Australia, the United States, Canada, Japan, Malaysia, Korea, Singapore, Indonesia, Thailand, the Philippines and Brunei. China, Taiwan and Hong Kong have joined since. NZ's exports to APEC countries represents two-thirds of its total export trade and the volume is growing yearly. In 1994, APEC nations agreed to move towards free trade within the region.

Aphids — major horticultural pests — are members of about 80 recorded species but only six are generally accepted as native. The others have been introduced accidentally with imports. The most common are the exotic ones such as the grape phylloxera aphid (*Dactylosphaera vitifoliae*) which last century devastated grape vines in many countries, including NZ, until a resistant vine was found; the cabbage aphid (*Brevicoryne brassicae*) which is a scourge of home gardeners, thriving on brassica as its name suggests; the woolly apple aphid (*Eriosoma lanigerum*) with its white fluffy-looking excretion; the black bean aphid (*Aphis craccivora*) which lives on legumes; and many others which inhabit almost every type of commercial crop.

The aphid is subject to a number of predators — from other insects to fungi and birds — but is a prolific and determined pest that requires the attention of anyone producing fruit, flowers, vegetables or cereals in NZ.

APPLE AND PEAR MARKETING BOARD

```
{ewc

a0930pas.dib
}
```

Apple and Pear Marketing Board, set up in 1948, is the sole exporter of apples and pears grown in NZ, selling a range of pipfruit varieties to 60 countries, under the ENZA brand. The board is a co-operative, owned and controlled by growers, and net profits from overseas sales are returned to suppliers. Of seven directors, four are nominated by the Fruitgrowers' Federation and three are nominated by the board itself (for their special business expertise) in consultation with the federation. ENZA Commercial Holdings Ltd is a fully owned subsidiary which is the board's commercial arm, and which, in turn, has wholly owned subsidiary companies: ENZA Processors Ltd which produces industrial quantities of juice concentrates and solid apple products; ENZA Products Ltd which manufactures and sells a range of fruit juices on the local market; and ENZA Fresh Ltd which supplies fresh pipfruit to the domestic market.

The largest markets are Continental Europe, with sales in excess of four million cartons, and the United Kingdom, Eire, Scandinavia and the Middle East, which take nearly three million cartons. Total annual sales are around 12 million cartons, less than 200,000 of them pears. Total revenue is around \$142 million, and the net operating surplus before tax in excess of \$8 million.

Apples dominate the trade with five varieties especially popular: Braeburn, Royal Gala, Red Delicious, Granny Smith and Fuji (in that order). The board and its growers consider dozens of new varieties each year in a bid to develop new products.

Some very large private growers have challenged the sole right of the board to export. The argument for continuing the single-seller structure is the board can operate more successfully against large competitors in world markets if it is itself a big organisation with international clout. The argument in favour of private orchardists being able to export is that such competition would make the board a more efficient operator.

APPRENTICESHIPS

Apprenticeships, the traditional method of trade training in NZ, typically meant a trade trainee would apprentice himself or herself to a fully qualified trades person employer for three or four years before being awarded trade qualifications, using a contract registered with the Labour Department; but rapid changes have seen all vocational training merging with the education system.

The Apprenticeship Act of 1983 — which has been effectively superseded by the Industry Training Act of 1992 — acknowledged the basic principle of serving and learning which was a feature of both the English guild schools of the 14th century and the chivalric education of the 12th. The old European guilds protected their members as well as transmitting to future generations of workers the skills of their various trades. The 1983 Act defined the obligation of an employer and employee to take all reasonable steps to ensure the employee was taught and acquired the knowledge and skills of an industry; made provision for all or most of that knowledge and those skills to be acquired by the employee by means of practical training received in the course of employment, but with the possibility of it being augmented by formal instruction from outside the job; provided for a period of employment whose length is related to the extent of the knowledge and skills to be acquired; and insisted on the formal recognition of the skills and knowledge the employee acquired at the end of the prescribed period.

The Industry Training Act 1992 was set up Industry Training Organisations (ITOs), designed to take over apprenticeship and primary industry cadetship training from the Education and Training Support Agency (ETSA). The ETSA had taken over responsibility for the administration of apprenticeships from the Labour Department in 1990. Apprenticeship contracts have declined in recent years as young people interested in vocational training have turned increasingly to full-time education at polytechnics.

APRA

APRA — an acronym for the Australasian Performing Rights Association Limited — was incorporated in Australia in 1926, as an association of authors, composers, music publishers and other musical copyright owners. Members of APRA assign to the association the broadcast, public performance and diffusion rights in their works. Through a system of licensing, and by arrangement with similar performing rights societies throughout the world, APRA collects copyright fees (set according to a schedule of tariffs) from users of copyright material. It then distributes these fees to its members in accordance with the frequency of use of each copyright item, as established by its various sampling techniques.

In practice, APRA functions in a far wider capacity than that of a fee-collection agency. Specifically in NZ, through its variously-constituted NZ music committees (established from 1956), it has subsidised commercial recordings and music publications, provided financial assistance for the performance and commissioning of NZ music, established an annual award for song writing (the APRA Silver Scroll Award), and generally supported a variety of projects aimed at furthering the music of New Zealand composers.

Aramoana is a small seaside village at the mouth of Otago Harbour, 27 km north-east of Dunedin, and 13 km along the harbour-shore road from Port Chalmers. Plans in the 1970s to build an aluminium smelter there were defeated by protestors who wanted the locality to retain its natural and peaceful character. Ironically, it later became a scene of carnage. On 13 November 1990 **David Gray**, a resident of Aramoana, earned the horrendous distinction of becoming NZ's most prolific killer when he shot 13 of the small town's men, women and children and then was himself cut down by the police anti-terrorist squad 22½ hours after he fired his first shots.

```

Arapuni, a township on the Waikato River, 54 km upstream from Hamilton and 14 km west of Putaruru, is the centre of a farming community and houses staff from the nearby Arapuni hydro-electric power station. The station went into production in 1929, generating 15 MW. After water seepage was reported in 1930, the station was closed for two years while fissures in the rock were sealed and it re-opened in 1932 with four machines installed. It has operated continuously since then, even during a period when four more machines were added, and now generates 160 MW. The dam is 64 m high.

Lake Arapuni, behind the dam which was built across what was formerly Paturuahine Gorge, covers 13.7 km and is a popular centre for fishing and water sports.

ARATIATIA RAPIDS

}
```

Aratiatia Rapids are on the Waikato River, 12 km north of the town of Taupo. The water falls 28 m here in 1 km. The rapids were preserved for their scenic interest when the Aratiatia hydro-electric station was built (completed in 1964).

The station has a capacity of 84 MW, but unlike the other hydro-electric stations, there is no dam because of the rapid natural drop. The rapids' narrow entrance is controlled by a concrete spillways block.

```

Arawa is a federation of Maori tribes based in the region extending from Rotorua to Maketu on the eastern coast of the Bay of Plenty. The tribe claims descent from the Arawa canoe which, according to tradition, brought early settlers from east Polynesia.

Arawa is also the name of a variety of wheat developed in NZ and released in 1955. For two seasons it enjoyed spectacular success as the most popular variety grown in the country but then faded into disuse.

ARAWATA

}
```

Arawata is the name of a river that rises in the Barrier Range of the Southern Alps and flows into Jackson Bay, South Westland. It is also the name for a locality adjacent to the lower reaches of the river, home of 'Arawata Bill', hero of a sequence of poems by Denis Glover based on the life of gold prospector William O'Leary. Arawata is a corruption of ara-whata, meaning 'bridge' or 'ladder', which is the spelling used for a farming locality 10 km from Opunake, in southern Taranaki.

ARBITRATION TRIBUNALS

Arbitration Tribunals to deal with industrial disputes existed in NZ from 1894, long before any compulsory state arbitration was introduced in any other country, until the Employment Contracts Act 1991. The Arbitration Court was established under the Industrial Conciliation and Arbitration Act during a remarkably progressive burst of legislative activity by the Liberal government at the end of last century.

The Act sought to give official sanction to trade unionism and security to workers. The author of much of the legislation was William Pember Reeves, under whom a Department of Labour was set up by the government to supervise the administration of the new laws.

Development The Arbitration Court was long regarded by reformers round the world as an exemplary institution for the fair solution of disagreements between employees and employers. It was, however, also the centre of much controversy at different times over the years as one side or the other considered it was suffering from court decisions, or as other factions felt decisions were adversely affecting the national economy.

The role of the court was bolstered by the first Labour government when it came to power in 1935 and with new legislation after World War Two when Labour tried to reinvigorate its egalitarian policies.

The court was abandoned by the unions themselves during the 1960s when they decided they could do better in their bid for better wages through direct bargaining with employers. Legislation in 1973 and 1977 altered the role of the court and adjusted the machinery of conciliation and arbitration procedures in attempts to modernise them.

Union Membership Membership of a union became compulsory within most industries in NZ in 1936, but in 1962 the National government tried to move the decision on compulsion to individual unions with a law that effectively resulted in the retention of compulsory unionism anyway. A union which voted in favour of an 'unqualified preference' clause in its award could still prosecute any worker in the industry not a member (with the exception of anyone getting court exemption on grounds of conscientious objection).

Functions of the Court A number of changes were made to industrial law during the 1980s, but the most complete revision since the 1930s was embodied in the Employment Contracts Act 1991, which moved the responsibility away from unions to individuals to negotiate their own contracts with employers. It set up the Employment Tribunal to mediate and adjudicate on contracts, and the Employment Court to hear appeals against tribunal decisions and to adjudicate on breaches of the Act.

ARCHAEOLOGY

```
{ewc

m1480pas.dib
}
```

Archaeology has lacked glamour in NZ because of the early, firm assumption that the country's history of human habitation is brief even compared with other islands in Polynesia.

For many years after settlement, the language and legends of the Maori themselves were used almost exclusively as a substitute for a written history of the nation. For this reason and others possibly associated with the use of wood rather than more durable materials by the earliest arrivals in a NZ almost completely covered with trees, the search for archaeological sites was long left to private fossickers and a few museum anthropologists.

Academic Approach In the 1930s and 1940s, however, a new, more methodical, academic approach to the problem was adopted by archaeologists such as Roger Duff. The origin of the moa-hunters' culture was investigated at such sites as Wairau Bar and Kaikoura. Earlier postulations that the moa-hunters — who lived predominantly, according to the evidence, on the eastern plains of the South Island — were of Melanesian origin were discounted and the history of the settlement of NZ put on a more scientific basis.

Interest has grown among the anthropology departments of the universities, particularly Auckland and Otago, in recent years, in researching archaeological sites of Maori settlements.

Techniques of site detection, excavation and recording, including the use of carbon-dating, have been developed and refined in recent years and many early pas, pits, middens, caves and rock shelters identified and explored. Computers have also made the collection and analysis of information more effective.

The NZ Archaeological Association was founded in 1955 to co-ordinate research and promote public interest. The Historic Places Act 1980 makes it necessary for any person to get the consent of the Historic Places Trust before damaging or modifying any archaeological site or even before undertaking a scientific excavation thereon.

The Antiquities Act 1975 is also a basic safeguard against the non-disclosure of valuable sites by claiming ownership for the Crown of all Maori artefacts found after 1 April 1976, by controlling the sale of all such artefacts within NZ and by placing export controls on a wide range of historically significant artefacts, chattels and materials. Given the interest and protection of the government, NZ archaeologists in increasing numbers are using excavations within this country and in other parts of the Pacific region to build up a picture of Polynesian life in earlier times. Recent work has also begun to detect the pattern of the epic Polynesian migrations.

ARCHERY

Archery on an organised basis began in NZ in 1870, when a club was formed at One Tree Hill in Auckland. Clubs were soon afterwards formed in Wellington and Dunedin, but the NZ Archery Association was established as late as 1943.

NZ's greatest archer was J Hinchco of Auckland, who won a total of 32 national titles during the 1950s and 1960s. M Wright of Auckland became British Empire women's champion with a postal shoot in 1953. In 1982 Neroli Fairhall won a gold medal at the Brisbane Commonwealth Games. A full range of clout, flight and field shoot events are held for men and women on a national basis each year.

Maori Architecture grew from the necessity of the original Polynesian immigrants for warmth and protection from the wind and rain in a new climate unlike the tropical islands from which they had come. They developed the style of large, rectangular meeting houses made from wooden planks with thatched, gabled roofs and doors recessed behind deep verandahs. Their living quarters or whare were built in a similar but smaller style, reflecting their communal life. The functions of cooking and food storage were kept separate from the whare.

Food houses were built like miniature whares on the top of poles to protect stores from the depredation of the Maori rat or dog.

The pioneers on arrival usually lived in primitive, temporary shelters under raupo thatches or calico tents, and moved quickly into timber-framed weatherboard cottages, the timber pit-sawn, with verandahs or lean-tos for washing and changing boots and outer clothing. In parts of the South Island where timber was less plentiful, the use of cob, rammed earth or stone was common; cob and rammed earth particularly also gave better insulation against the more severe South Island winters. The settlers, eminently practical people, built their houses to the road with standard villa or bungalow windows, usually ignoring the sun, prevailing winds or any site advantages.

Until World War Two NZ houses reflected English styles almost entirely, with the weatherboard and either corrugated, galvanised iron or tiled roofs. In the past 30 years more has been made of light and space in houses, appropriate to the NZ climate and lifestyle.

Earthquake risk tended to keep timber popular for domestic dwellings. Earlier, heart kauri, matai and totara were the preferred timbers for house construction, but as native timber became scarce and since techniques have been developed to preserve exotic pine softwoods, almost all building timber now comes from the renewable radiata pine forests.

Commercial and public buildings tended to be two or three storeys and made in either brick covered by plaster or in timber. National chains of banks, insurance companies and post offices mostly used similar designs in all towns, varying only in size, and usually imitating the stolid, squat appearance of far larger buildings in Britain.

The early days of public building in NZ did produce a few remarkable monuments to imaginations inspired mainly by European ideas. Among them are Cyril Mountford's provincial Council Chambers built in Christchurch in 1865, and Frederick Thatcher's 1865 Old St Paul's in Wellington, both in the Romantic tradition; and Francis William Petre's Cathedral of the Blessed Sacrament built at the turn of the century, more in the style of Classicism. Perhaps the most celebrated building in what is a Maori style — described by some commentators as a NZ classic — is the Chapel of Futuna in Karori, Wellington, designed by John Scott and built at the end of the 1950s.

One city which has celebrated its architectural style and dressed it up into a tourism attraction is Napier, rebuilt after its disastrous 1931 earthquake in the Art Deco style of that time.

Over the past 25 years advances in building technology have enabled architects to design a wide variety of high-rise buildings even in regions such as Wellington, where earthquake risk is high — in fact, especially in Wellington where the earthquake risk posed by older large buildings has seen their demolition and the virtual rebuilding of the central city in the modern, square, concrete and glass idiom.

The skyline in Auckland, Wellington and Christchurch has soared since World War Two to around 40 storeys in the tallest buildings. There has been little if any inspired design and some monstrosities — rather the same kind of functional development common in small to medium-sized cities throughout the Western world.

ARIKI

Ariki are the paramount chiefs of the Maori tribes. The role is hereditary and the ariki take precedence over rangatira and kaumatua.

ARMED FORCES

(see Defence)

ARMYWORMS AND CUTWORMS

Armyworms and cutworms are the caterpillars of noctuid moths (that is, they belong to the Noctuidae or owl-moth family). Many species, both native and exotic, are common. The armyworms particularly sometimes flourish to such a degree they destroy large areas of pasture or cereal crops.

The adult moths are 15 to 20 mm long, mostly fawnish or greyish or darker in colour, and will often invade houses at night if lights are left on and windows or doors open. The globular eggs of the moths are laid either singly or in clusters on food plants which host the caterpillars. These caterpillars can measure 25 to 45 mm at maturity.

The most common armyworm in the North Island and the north of the South Island is *Mythimna separata*, which produces three generations a year. Of all the armyworm and cutworm species, it is the one which most frequently reaches epidemic levels and thus becomes a major agricultural pest. In the South Island, below the Nelson and Marlborough provinces, the most prevalent species is *Persectania aversa*.

A common and very destructive native form of cutworm is *Graphania mutans*, and a common pest among the exotic species is *Argotis ipsilon aneituma*, usually known as the greasy cutworm.

ARNDT, 'Mina'

'Mina' Arndt (1885–1926) (Mrs Leo Mannoy Hermina) was born in Queenstown, and studied at Wellington Technical College. She went to Europe where she studied etching under Herman Struck and painting under Louis Corinth in Berlin. Corinth's influence is very evident in her painting 'Girl in a Blue Blouse'. She was a member of the Société des Beaux Arts. She returned to NZ after the outbreak of World War One and settled in Wellington, painting in a studio and holding small exhibitions of her work. In 1917, after her marriage, she moved to Motueka where her style developed further, becoming lighter in tone and brighter in colour. She died suddenly in 1926 and it was not until 1961, as a result of a large retrospective exhibition of her work, that the public became more aware of her as an artist and her place in the development of NZ art.

ARNETT, Peter Gregg

Peter Gregg Arnett (1934–) began working as a reporter on the *Southland Times* at the age of 17 and rose to become one of the world's top foreign correspondents, both in print and for television. He was born in Riverton, educated at Waitaki Boys' High School and worked as a journalist in Invercargill and Wellington before joining the *Sydney Sun* in 1957. He was associate editor of *Bangkok World* in Thailand from 1958–60, editor of the *Vientiane World* in Laos (1960), Associate Press (AP) correspondent in Jakarta (1961–62) and in Vietnam (1962–70). Arnett worked at the AP head office in New York before scripting and conducting interviews for a television documentary on Vietnam, called *The 10,000 Day War*, for Canadian Broadcasting in 1980–81. Since then he has acted as foreign correspondent in many of the world's trouble spots for CNN (Cable News Network), becoming a world news figure himself during the war in Iraq when he reported live from Baghdad. He has won a number of prestigious international awards for journalism, including a Pulitzer Prize (1966).

ARNEY, Sir George Alfred

Sir George Alfred Arney (1810–83) was born in Salisbury, England, and gained a BA (1832) and MA (1833) at Oxford where he was a noted Classics scholar. He was called to the Bar in 1837 and after practising for 20 years was appointed Chief Justice of NZ. He was knighted in 1862 and was for a few months in 1873, administrator of the government. He retired to England in 1875.

Arnold River flows into the Grey River at Stillwater, having run down from Lake Brunner in Grey County, Westland. It is believed to have been named after the Rev Dr Thomas Arnold, famous headmaster of Rugby school in England and father of the poet Matthew Arnold.

On the river, 26 km south-east of Greymouth, near Kaimata, is the smallest hydro-electric station in the national network. It generates 3.6 MW and supplies the energy requirements of about 3,200 households on the West Coast. The station was built on the Arnold River by the Grey Electric Power Board in 1932 and bought by the government in 1938.

ARNOLD, Thomas

Thomas Arnold (1823–1900) was a son of Dr Arnold of Rugby school, graduated from Oxford in 1845, accepted a position with the Colonial Office and came to NZ in 1848 to take up land in the Wellington district bought by his father. He started a school in Nelson but after about a year moved on to Tasmania. He wrote *Passages in a Wandering Life*, published in 1900, which gives an account of his stay in NZ.

Richard Arnst (1883–1953) was born at Taitapu, near Christchurch, and became a champion cyclist before taking up sculling in 1906. Within three years he was world champion, remaining undefeated until beaten by Englishman Ernest Barry on the Thames in 1912. He briefly regained the title in 1921 but lost it again the following year. He later became an international marksman.

Arnst was the son of a German immigrant and was christened Jacob Diedrich but adopted the name Richard as a youth and was widely known as Dick.

AROHA

Aroha is the Maori word which is usually loosely translated as 'love' or 'caring'. Originally it had a meaning which involved kinship as much as friendship and affection, and it does not apply to erotic love. In *The Maoris of New Zealand* Joan Metge wrote that the word 'retains a number of meanings that are not covered by love'. It is appropriately used to express both sympathy and sorrow in the context of bereavement, gratitude on receipt of a gift or service, yearning for an absent kinsman or friend, pity and compassion towards someone in trouble and approval for a person or action.'

Arrowtown, a town on the western bank of the Arrow River, 21 km north-east of Queenstown, in Central Otago, is a tourist centre with a museum and reconstructed commercial area recalling the township's colourful history during the goldrush days. The town grew overnight when prospector William Fox found gold nearby in 1862 and it had some of the character of an American Wild West town when notorious blackbirder and criminal Bully Hayes opened a hotel there. The town was constituted a borough in 1867 and, after the goldrush ended, it became the centre for a farming area.

Early Colonial Period

Maori Portraiture

Between the Wars

After the War

Art in NZ has its origins in Maori culture centuries before European settlement, and especially in the later Classic Maori period as kumara cultivation and storage techniques gave them more leisure in their busy, practical lives. Although carving was their most complex artistic expression, the forms that evolved from spiritual values decorated a range of artifacts that had functional or ceremonial uses well integrated into Maori life.

Men worked in the hard materials such as wood, stone and bone, and women crafted flax fibre into clothing, mats and baskets, and they were all competent to produce functional goods. Specialists evolved extraordinary skills which were revered as a communal gift even though it was mainly dedicated to the adornment of artifacts for the use of high-ranking tribal chiefs.

The first European style of art expressed in NZ were the pen drawings by Isaac Gilseman who accompanied Abel Tasman in 1642. The skirmish between the Dutch and Maori in Golden Bay is captured in a dramatic sketch that's been widely published in historical volumes since.

Draughtsmen who accompanied Captain Cook on his three voyages to make scientific records — Sydney Parkinson, William Hodges and John Webber — also recorded their impressions of the country and its people.

The first European settlers' lives were also dominated by the practical business of carving a life for themselves out of the wilderness of their new country. Most of them were too busy to have any time or enthusiasm to express any artistic impulse they may have had, except for those few who had the education and the money to indulge mostly a nostalgic sense of a culture left behind. The majority of immigrants were working class or lower middle class whose intellectual passion, if they had one, was for scientific or technical learning they sought from mechanics' institutes of the sort booming in the newly exploding towns and cities of industrial Britain.

The first of the curious, artistic Europeans to come here was Augustus Earle, 'the wandering artist', whose water-colours of Maori during a visit in the late 1820s depicted them as proudly independent living in harmony with their natural environment. This pattern of extended visits was followed by others, the most notable being the three months spent by George French Angas in the North Island during 1843–4 drawing and painting the Maori, their activities,

buildings and artifacts. After his return to England he published *The NZers Illustrated* (London 1846) with its numerous lithographs.

ART - Early Colonial Period

}
```

Many of the early artists were transitory figures who recorded their impressions of the new country for a British audience. Draughtsmen during this early colonial period were often employed by the NZ Company, or similar enterprises, and usually returned after no more than a few years here and produced lithographs for wide distribution. *Pictorial Illustrations of NZ* (London 1847) by Samuel Charles Brees is an example. Others are the four lithographs by T Allom, after water-colours by soldier-artist Charles Heaphy, used to promote the company's settlement scheme; Charles Meryon's etchings of 1863–6, based on drawings he produced in 1843 while in the vicinity of Akaroa; and the carefully observed, topical, but often chatty pictures done by William Strutt during his stay of 1855–6 in the Taranaki district.

Of greater eventual value were the delineators of landscapes involved in the country's exploration or aspects of its settlement which, though largely conditioned by topographical interests, reflect a sense of identification with the land. This can be observed in the lyricism of Heaphy's Mount Egmont from the Southward (1839) or the watercolours of Bream Head, Whangarei (1850s), in the broader, more earthy landscapes of William Fox, the primeval rhythm captured by John Buchanan in his *Milford Sound, Looking North-West from Freshwater Basin* (1863), the gentler realism of the Rev John Kinder, the concise townscapes of Edward Ashworth, in the grand panoramic views of western Otago by John Turnbull Thomson, or the variety of views from Charles Decimus Barraud. The work of amateur artists like politicians James E FitzGerald and Frederick Weld, and Emily Harper and Captain E E Temple also pictorially recorded the opening-up of land for grazing and agriculture.

In his small, full-length portraits of Maori, Joseph Jenner Merrett continued that documentary line of painting with its quasi-scientific justification that was, in a different way, taken up by some of the soldier-artists during the Maori-European conflicts of the 1860s. Lieutenant Horatio Gordon Robley sympathetically portrayed the Maori in battle or in everyday living and made a study of the moko. Gustavus Ferdinand von Tempskey revealed a more romantic view in picturing the skirmishes between Maori and Forest Rangers.

Towards the end of the 1860s and into the 1870s the conventions of romantic realism began to acquire informality, gently dramatised by the luminosity of atmospheric light in which nature acquired a rough-hewn contemplative aspect. This was most apparent in the paintings of John Gully and William Mathew Hodgkins who, working in the less troubled south, used the natural grandeur of the Southern Alps. Other outstanding 19th century painters were Alfred Sharpe, John Hoyte, Charles Blomfield, James Nairn and Petrus van der Velden.

In February 1870, the Otago School of Art, opened in Dunedin, the first public art school in the country, with David Con Hutton (1843–1910) as Master. In April that year a society of

artists was formed in Auckland. In 1876 the Otago Art Society came into being, followed by the Canterbury Society of Arts in 1880, and in 1882 the Fine Arts Association of NZ was established in Wellington (but in 1889 changed to the NZ Academy of Fine Arts). The Canterbury School of Art opened in 1882, the Wellington School of Design in 1886 and late in 1889 the Elam School of Art was established in rooms provided in the Auckland Municipal Art Gallery — the country's first permanent art gallery — which had opened early the previous year.

In the opening years of the 20th century, the luminaries were Nairn and van der Velden, Girolama Nerli and Wilson Walsh. And a predominance of landscape and portraiture began to bloom on the brushes of Nerli, Frances Hodgkins, Raymond McIntyre, Sydney L Thompson, Mary Elizabeth Tripe, Walter Bowring Archibald F Nichol and others.

People, either in landscapes or interiors or in their own right, became an important image in works by George E Butler, Dorothy Kate Richmond, James F Scott, Frances McCracken, Robert Procter, Maud Sherwood, H Linley Richardson and G K Webber. In the graphic media, the human figure dominated illustrative work such as that by Leonard H Booth and in the caricatures of A V Hunt and David Low. There was also a growing interest in animal painting. In this William Greene led, but its heyday came later in the 1920s, especially in the paintings by Violet E Whiteman.

ART - Maori Portraiture

Maori portraiture was a continuing preoccupation with the famous replica-like work of Gottfried Lindauer and then the reconstructions of Maori life by L J Steele. Around 1900, as Maori numbers dwindled and fears spread that they were a dying race, the portrayal of their life gained some urgency among artists. The implications of this impregnated the Maori portraits by Charles F Goldie, but were countered by the personalised portraits from Fristrom and others. The paintings of contemporary Maori life by D K Richmond and Walter Wright were set against reconstructions of ancient ways.

During World War One, Mina Arndt returned after studying in Germany, but the sombre expressionistic trend in her paintings was not always appreciated. In Wellington, Len Lye, as a result of his interest in motion, made wooden constructions with moving parts, but within a few years he too had joined the expatriates. On the Western Front, G E Butler and N Welch were commissioned official war artists.

ART - Between the Wars

By 1922 W S La Trobe, as superintendent of Technical Education, had in operation his scheme whereby British trained artists were brought out to improve the level of art instruction. Among the arrivals were Robert Donn, Roland Hipkins, Archibald J C Fisher who, in 1924, took over the directorship of the Elam School of Art, Vivian Smith, William Henry Allen , Robert N Field who, at Dunedin Art School had considerable influence as a teacher, and in 1929, Christopher Perkins.

In 1924 the National Art Association of NZ was founded on the basis that artist members controlled its organisation. The issue of control set a pattern for other breakaway groups over the next 25 years. The most important were The Group, Christchurch (1929–77), the NZ Society of Artists (1933–36) and the Rutland Group, Auckland (1935–58). Other important factors relating to art were the publication of *Art in NZ* (1928–46), the opening of the Robert McDougall Art Gallery in 1932 and the National Art Gallery in 1936, and in 1940 the National Centennial Exhibition of New Zealand Art.

Modest contacts with Modernism came with work brought back from England by Edith Collier in the early 1920s, in work sent back from Europe by Rhona Haszard, with the return in 1929 of John Weeks and his polite Cubist works, with the arrival of Perkins and the exhibiting of Field's paintings such as *Christ at the Well of Samaria*. Then, in the early 1930s, Flora Scales returned from Europe and exhibited work that showed ideas acquired while studying at Hans Hofmann's school in Munich.

The interest in specifically NZ landscape during the 1930s and 1940s also asserted itself in the paintings of Perkins, Jenny Campbell, Ida Eise, John Weeks, John and Charles Tole, Myra Kirkpatrick, M T (Toss) Woollaston, Juliet Peter, Doris Lusk, Elise Mourant and, in a more symbolic way, in the early landscapes of Colin McCahon.

Between 1920 and 1950 portraits came from H L Richardson, A F Nicoll, Elizabeth Wallwork, Elizabeth Kelly, Ida Carey, Ivy Fife, M T Woollaston, to reach a climax with Rita Angus's *Portrait of Betty Curnow* (1942) and, by contrast, *Characterization in Colour* (1941) by May Smith.

During World War Two, Peter McIntyre, Russell Clark and Alan Barns-Graham became official war artists. In contrast with McIntyre's popular action paintings, a more pointed statement about war was *Guadalcanal* (1946) by William J Reed.

ART - After the War

Artists worked in isolation, committed to the cause of Modernism, a new language not all could read. Among those who could were Gordon Walters, Colin McCahon and Milan Mrkusich. It was, however, a 1948–9 public controversy in Christchurch over the McDougall Art Gallery's rejection of Frances Hodgkins's *Pleasure Garden* that brought modern art into the open.

By the late 1950s some older artists felt that their world was threatened, but while change and uncertainty were to dominate art from then on, there was greater freedom of stylistic choice. The expressionism introduced by Rudolf Gopas and his eventual influence on younger artists reflects this opening up of attitudes.

In 1958 Colin McCahon visited the United States and on his return painted the *Northland Panels* in which his contact with American painting was distilled into his experience as a NZ painter. This was followed by his *Elias* series in which words predominate. Such combinations of old and new forces were typical of this transitional period when NZ painting caught up with the Western world. In 1959 Jackie Fahey painted pictures about the frustration of women living in suburbia. A number of young Maori artists, including Cliff Whiting, Para Matchitt and Ralph Hotere made use of Western art styles but retained allegiance to their Maori heritage.

Throughout the 1960s abstract art gained acceptance. Patrick Hanly, returning from Europe, brought back a new attitude to figurative painting, best illustrated in his *Figures in Light* series (1964). Don Binney created a semi-symbolic regionalism with his paintings of birds. A similar regionalism appeared with Michael Smither and Robin White.

By the 1970s the realism apparent in their work became more assertive in the paintings of Brent Wong, Grahame Sydney, Peter Siddell and Glenda Randerson. At the same time an expressionistic type of figure painting was practised by Tony Fomison, Philip Clairmont and Jeffrey Harris, John Lethbridge and Denys Watkins. Abstract painting from the mid-70s emphasised the repetitive motifs as in Allan Maddox, Ian Scott, Robert McLeod, Philippa Blair and John Hurrell.

Since the early 1970s sculpture has undergone radical changes and considerable energy has gone into environments such as Leon Narbey's work, the conceptual art of Billy Apple or performance art by Jim Allen, Bruce Barber and Andrew Drummond.

Recent trends are a tendency towards expressionistic idioms, a greater consciousness of women's role in art, the contribution of Maori artists and, for contemporary NZ art and traditional Maori art, a modest sense of international recognition.

Within and beyond NZ, Colin McCahon, through paintings such as *Victory of Death 2*, is being seen as the country's major modern artist.

Art galleries and museums number more than 250 and range in size from the national complex in Wellington to a number of one-room cottage museums in small settlements with historic backgrounds.

The Museum of NZ Te Papa Tongarewa, constructed on a superb waterfront site, was founded in 1992 as the national museum of art, history, Maori culture with a pronounced focus on Aotearoa NZ and its place in the world. The museum incorporates the National Art Gallery, established in the capital city in 1936, in line of succession from an NZ Academy of Fine Arts, established in 1889, which opened as the Wellington Public Art Gallery in 1906.

The ten most prestigious art galleries in the country are:

- Auckland City Art Gallery, the oldest (opened in 1888), and the possessor of the largest and most varied permanent collection.
- Bishop Suter Art Gallery, opened in Nelson in 1898, and then partly demolished, renovated and extended in the 1970s, re-opening in 1979.
- Dowse Art Museum, opened in Lower Hutt in 1971.
- Dunedin Public Art Gallery, founded in the late 1920s, in a building at Logan Park originally put up for the NZ and South Seas International Exhibition in 1925–26. Dunedin's art society, founded 1884, is NZ's oldest.
- Govett-Brewster Art Gallery, established in New Plymouth in 1966, in a former movie theatre which was altered and renovated and re-opened in 1970. The project was originally endowed in 1962 by Monica Brewster (née Govett).
- Manawatu Art Gallery, in Palmerston North, opened in an altered and renovated house in 1960, and moved to a new, specially designed and built gallery with 1,000 m² of exhibition space in 1977.
- Robert McDougall Art Gallery, opened in Christchurch in 1932, following an endowment by local businessman, R E McDougall.
- Sarjeant Gallery, opened in Wanganui in 1919 as the result of an endowment by a local farmer, Henry Sarjeant, bequeathed on his death seven years before.
- Waikato Museum of Art and History, Te Whare Taonga O Waikato, in Hamilton, founded in 1948.

Arthurs Pass over the main divide of the Southern Alps is named after Arthur Dudley Dobson who heard of the existence of the mountain pass from a Maori chief, Tarapuhi. Dobson and his brothers, George and Edward, became the first Europeans to cross it in 1864. The township of Arthurs Pass is 5 km south of the pass, virtually on the border of Canterbury and Westland. Dobson (then Sir Arthur) wrote later that the gold rush on the West Coast hastened interest in a pass through from Canterbury and by 1866 the highway was built, by more than a thousand men.

Arthurs Pass National Park, 99,270 ha, established in 1929, is a beautiful wilderness area, sharing a common boundary with Westland National Park, established in 1960 over 117,547 ha. Between them the two parks contain a number of spectacular Southern Alps peaks, the Tasman, Franz Josef and Fox Glaciers, and large areas of luxuriant rain forest. (*See National Parks.*)

ARTS COUNCIL

Arts Council of NZ Toi Aotearoa was established in 1994 by legislation which abolished the Queen Elizabeth II Arts Council, the northern central and southern regional councils and Te Waka Toi, the council for Maori and Pacific Arts. The new council, with seven members appointed by the government, is charged with policy formation and two other seven-member boards were set up: an arts board and a Maori arts board (a new Te Waka Toi). Operationally, the council establishes the funds to be distributed and the arts boards undertake the detailed distribution through professional community arts organisations and individuals. The changes were made, according to the government, to recognise more fully the bicultural nature of NZ society and to strengthen public participation.

Most of the council's money comes from the government through the Minister for the Arts, to whom it also acts as adviser, and the Lotteries Board.

The predecessor, the Queen Elizabeth II Arts Council, was set up in 1964 to promote higher standards in the arts in this country and to expand interest by participants and by audiences. It worked specifically through regional arts councils, community arts councils, and the council for Maori and South Pacific Arts. In 1991 the council took over distribution of grants to writers and, in 1992, the Authors Fund (a public lending right), functions the new council retained.

ASBESTOS

Asbestos, that is chrysotile asbestos, mainly associated with serpentines, is found in significant deposits of favourable economic quality in Otago. The size of the deposits in Otago and other parts of the South Island is under investigation. The commercial value of asbestos has been reduced by its carcinogenic effects on those working with it.

ASHBRIDGE, Bryan Trevor

Bryan Trevor Ashbridge (1926–95) was principal male dancer with the Royal Ballet from 1958 to 1965, and has been an important influence in NZ and Australian ballet for 20 years. He was born in Wellington and educated at Auckland Grammar School where he captained the cricket and soccer teams and was high jump champion. During his time with the Royal Ballet he partnered Alicia Markova, Margot Fonteyn, Moira Shearer, Beryl Grey, Nadia Nerina and fellow NZer Rowena Jackson, as well as other leading ballerinas of his time. He danced in many European countries and was the first British male dancer to perform behind the Iron Curtain.

After leaving the Royal Ballet, Ashbridge was a producer for the BBC and the NZBC, and Channel 9 and ABC (in Australia), and was heavily involved in ballet stage production and films.

Ashburton is the main centre in mid-Canterbury, 76 km north-east of Timaru on the main South Island state highway. The area was originally known as Turton after the first European settlers there, Mr and Mrs William Turton, but when the town site was surveyed in 1864, it was renamed after the 2nd Baron Ashburton, one of the founders of the Canterbury Association. Population is now in excess of 14,000.

Sylvia Ashton-Warner (1908–84) was one of NZ's top novelists who also had an international reputation as an educationist. She was one of ten children of an invalid father and a forceful teacher mother. She herself trained as a teacher, married a teacher (Keith Henderson) and for many years taught in Maori schools. Her first novel, *Spinster* (1958), won international regard and was a commercial success, being made into a film starring Shirley MacLaine, Jack Hawkins and Laurence Harvey. Later novels included *Incense to Idols* (1960), *Bell Call* (1964), *Greenstone* (1966) and *Three* (1970). During her years of teaching very young children at Maori schools, she developed what she called 'organic teaching', explained in the book, *Teacher* (1963), which provoked interest among educationists in other countries. An autobiography, *I Passed this Way*, was published in the US in 1979 and in NZ in 1980, and in 1986 a feature movie, based on her life, was produced in NZ.

ASHWELL, Benjamin Yates

}
```

Benjamin Yates Ashwell (1810–83) was an impetuous and eccentric Church Missionary Society lay missionary, who was remarkably successful with the Waikato Maori in the early days of NZ settlement.

Ashwell was born in Birmingham, served first in Sierra Leone but had to leave because of his frail health, and arrived in NZ in 1835. He was at first considered temperamentally unsuited for work with the Maori and, until he opened his own mission house at Taupiri, in the north Waikato, after more than two years in the country, he failed to establish any firm relationships either with fellow missionaries or the Maori. But at Taupiri he was an immediate success and over the following 15 years established a powerful influence throughout the Waikato, even being called upon by Maori groups to settle disputes. He was ordained in Auckland in 1848 after attending St John's Theological College.

In the 1850s Ashwell's school at Taupiri was considered an example to others throughout the country. He retreated to Auckland during the land wars and, although he returned to the Waikato in the late 1860s, he found most of his former Maori associates had dispersed. He spent the last 15 years of his life in Auckland.

ASIAN DEVELOPMENT BANK

Asian Development Bank, of which NZ is a member, is designed to enhance the economic development of the region. NZ's initial contribution to the capital stock of the bank was US\$22.56 million, half of which was callable. Of the paid-in portion, half was paid in convertible currency and the balance in NZ currency. ADB is owned by 37 countries in the Asia Pacific region and 16 Europe and North American countries. NZ has contributed more than \$51 million since 1974, and holds 27,170 shares in the bank, about 2.6 per cent of the voting share.

Two special funds to which NZ also contributes are: the Asian Development Fund (ADF) and the Technical Assistance Special Fund (TASF).

Astrolabe was the name of the vessel in which Frenchman Dumont d'Urville explored the NZ coast in 1827, and which gave its name to Astrolabe Roadstead, Astrolabe Bay and Astrolabe Island, all near Motueka, and Astrolabe Rock, near Auckland. The vessel, previously named *Coquille*, was renamed by D'Urville.

ATHFIELD, Ian Charles

Ian Charles Athfield (1940–) has left a distinctive creative mark on NZ architecture. He was born in Christchurch, educated at Christchurch Boys' High School, the Christchurch Technical Institute, the Ilam School of Fine Arts and the University of Auckland School of Architecture, where he graduated in May 1964.

After a brief spell in Auckland with the architectural firm of Stephenson and Turner, Athfield went to Wellington and spent five years with Structon Group before setting up as principal of Athfield Architects in 1968.

He achieved international success out of 476 design teams from around the world, winning the Manila Housing competition in the Philippines, in 1976. Athfield's influence on NZ architecture comes from a romantic-regionalist style. He has been a consistent winner of national design awards for architecture since the 1970s.

Athletics, or track and field as it is mostly now known, began on an organised basis in NZ with the formation of the Wellington Amateur Athletic Club in 1875, only 25 years after the foundation of the first known club in the world, the Exeter College Athletic Club at Oxford University. The first championships here were held in 1888, the year after the formation of the NZ Amateur Athletic Association (NZAAA), and only 22 years after the first national championships had been held in Britain. For the first 40 years, the NZAAA also controlled cycling, and most clubs in NZ were called amateur athletics and cycling clubs.

NZ athletes at first had successes at sprints and hurdles events, but international competition was confined mainly within Britain, Australia and NZ. Since international interest spread with the expansion of the modern Olympics during the first two decades of the 20th century, athletics has become second only to soccer in the number of participants worldwide.

NZ gradually established itself as the outstanding producer of middle-distance runners in the world on a population basis — along with Finland and Scandinavia — with remarkable performers in races from the half-mile (804 m) to the six miles (9.654 km), and the equivalent metric distances (800 m and 1500 m). Among a large number of competitors in the top international class, the greatest have been Jack Lovelock, Peter Snell, Murray Halberg and John Walker.

Athletics in NZ tended to be a sport which attracted moderate interest except for heightened attention every two years for Olympic and Commonwealth festivals. During the second half of the 1960s and in the 1970s, however, a huge spread of interest in jogging and competitive distance running intensified public attention following the international success of Snell, Halberg and Walker.

Atiamuri is a settlement on the Waikato River, 25 km south-east from Tokoroa and 30 km east from Mangakino, and near the site of Atiamuri hydro-electric power station.

This station is the third in a chain of eight hydro-electric power stations downstream from Lake Taupo. Construction began in 1953, power was first produced in 1958, the station was completed in 1962 and it has a generating capacity of 84 MW.

Upper Atiamuri is a locality 6 km to the north-west, on the banks of a tributary of the Waikato, the Mangaharekeke Stream. The name Atiamuri is said to be in memory of a famous Maori woman, Tia.

a1360pbs.dib
}
```

Sir Harry Albert Atkinson (1831–92) was born in Cheshire, England, son of an architect and engineer, John Atkinson. Accompanied by a younger brother, Arthur, he followed an elder brother, William, to New Plymouth where he arrived in 1853 and took up land. He was elected to the Taranaki Provincial Council in 1857 and the following year won a commission with the Taranaki Rifle Volunteer Company. He was an outstanding soldier during the wars with the Maori during the 1860s, for a while being commander of the Forest Rangers. He became deputy-superintendent of Taranaki, was elected to Parliament in 1861, and became defence minister in Frederick Weld's administration three years later.

In 1874 he joined Vogel's ministry and served in the House over the following 16 years in a number of ministries, and as premier from September 1876 to October 1877, and for two further terms, in 1883 and from 1887 to 1891. He became Speaker of the Legislative Council in 1891.

Atkinson was a brusque man, never popular, but he embraced a number of radical causes, most notably a national insurance scheme he introduced to provide for the aged, the sick, the widowed and the orphaned. It was to be financed partly by compulsory contributions and partly by the state. It was greeted with laughter and Sir George Grey described it as a blow at Christianity. Atkinson's brother, Arthur, became a lawyer in Nelson.

ATUA

Atua is the Maori word for spirit or god. In the traditional Maori religion, most atua were the spirits of fairly recent ancestors. They sometimes guided and protected their descendants but they often punished them with illness, especially if they had broken the laws of tapu. To secure their goodwill, offerings were made to them and karakia (incantations) were recited. Atua were thought to be immaterial, but sometimes to assume certain forms. They were especially feared when they appeared as lizards. With the introduction of Christianity, the word atua came to be used of the Christian God. Figures in Maori mythology, such as Rangi, Papa, Tane and Maui, were not formerly known as atua, although this word is sometimes used of them now. These earliest, mythical ancestors, who had a different role in Maori religion, were known instead as tangata (people) or tupuna (ancestors).

Mary Joseph Aubert (1835–1926) was born near Lyons, France, where she studied chemistry and medicine before serving as a nursing sister in the Crimean War. She was among five nurses who were brought to NZ by Bishop Pompallier in 1861. She nursed at an orphanage in Auckland and among the poor and sick in Hawke's Bay, and established homes for foundlings and incurables at Hiruharama, on the Whanganui River , in 1890. During the 1880s she founded the Order of the Daughters of Our Lady of Compassion (with six other sisters working under her) which became noted for its tireless devotion in working among the distressed and deprived. The order was formally established by the Pope during a visit to Rome by Mother Aubert in 1914. In 1908 she had opened the Home of Compassion at Island Bay, Wellington, and later opened another home in Auckland.

Maori Settlement

European Settlement

Local Government

Climate

Auckland, NZ's largest urban area, straddles the isthmus between the Hauraki Gulf on the east coast and the Manukau Harbour on the west coast of the North Island. Auckland City Council is one of five municipalities that administer the region which extends more than 30 km from Albany and the East Coast Bays in the north to Papakura in the south, and which accommodates a million people, more than a quarter of the country's population. The other municipalities are Manukau City, North Shore City Council, Waitakere City Council and the Papakura District Council. Auckland is also NZ's leading seaport, airport and commercial and industrial centre, and continues to be the fastest-growing region. It is the most cosmopolitan city in the country and, as the main tourist and trade gateway, it is more metropolitan in tone than many much larger and more populous secondary cities in other countries.

The settlement and later the province were named after the first Earl of Auckland, George Eden, who was Governor-General of India when the settlement of Auckland was founded. Previously the Earl had been First Lord of the Admiralty and had given Hobson command of HMS *Rattlesnake* in which he first visited NZ in 1837.

AUCKLAND - Maori Settlement

There are no figures for the Maori population before this century, but it is certain that — with a large proportion of the Maori living in the region, at least since Cook's arrival — the Auckland provincial region has always been the most populous area in NZ. In fact it is probable that the region centring on the isthmus carried more than 20,000 people even before the first Europeans arrived. A number of extinct volcanic cones made the area attractive for the construction of fortified Maori villages, the main ones being Mt Eden, Mt Albert, Mt Wellington, One Tree Hill, and Mt Hobson, all on the narrow isthmus between the two harbours. The whole isthmus is called after Nga Marama chief, Kiwi Tamaki, who dominated the area from a stronghold on One Tree Hill until the Ngati Whatua from the Helensville district took control during the second half of the 18th century. When Governor William Hobson bought the city site from the Ngati Whatua it had been relatively depopulated because of inter-tribal conflict.

```

The city was established in 1840 by Hobson as the country's second capital, after Russell (then 8 km south of the existing Russell) in the Bay of Islands. Auckland, in turn, lost its capital status in 1865 when Wellington was considered more central in a long country with transport difficulties. It was constituted a borough in 1851, the first parliament assembled in the town in 1854, and in 1871 it became a city.

In 1853 the Province of Auckland was established, the largest of the six throughout the country, with the 39th parallel as the southern boundary, running from Mahia on the east coast through to the Whanganui River on the west. It was the most populous town and province in the 1850s, but its European population was surpassed first by Otago and then by Canterbury during the 1860s and 1870s. It regained the lead just before the end of the century and has held it ever since.

AUCKLAND - Local Government

Auckland was ruled by a proliferation of local bodies for nearly a century from the abolition of the provinces in 1876 until the 1960s. More than 20 boroughs and cities still ruled the region before they were consolidated in 1989 into the four main cities and the Papakura District. An attempt was made in 1903, inspired by the city's mayor, Sir Arthur Myers, to form a Greater Auckland organisation to administer all municipal services over the whole urban region. In 1956 an Auckland Metropolitan Council was formed as a purely advisory body. Parochial in-fighting, however, prevented any regional organisation with administrative capability being formed, until the Auckland Regional Authority Act of 1963 vested responsibility in a regionally representative authority for planning, bulk water supply, sewer drainage, the international airport, passenger transport, reserves, regional roads and civil defence. However, when the small local authorities were amalgamated within the five present municipalities in 1989, the Auckland Regional Council (as it is now called) had its powers curtailed. It now has control over resource management, regional parks, civil defence, pest destruction and noxious plant control, transport services licensing and some transport planning.

The Auckland Regional Services Trust (ARST) was established in 1992 to take over ownership and management of the non-core assets of the Auckland Regional Council (ARC) and to use these to service and repay the ARC's debt. Thus the ARST now owns a number of valuable Auckland City properties, 80 per cent of Ports of Auckland Ltd, regional forests and subsidiary companies that control water services, some public transport services and rubbish disposal.

City and regional councillors and regional trustees are elected every three years during the municipal elections.

AUCKLAND - Climate

Auckland's climate is classified as warm temperate (mean 18°C in summer, 11°C in winter), with good rainfall throughout the year (averaging 90 mm in summer, 140 mm in winter).

AUCKLAND CITY ART GALLERY

Auckland City Art Gallery was opened in February 1888 and is the oldest art gallery in NZ, although Dunedin has the oldest art society.

The building, designed by Melbourne architects Grainger and D'Ebro, cost at that time £21,851 and is still a feature of the central Auckland skyline. The gallery collection was founded on paintings given by James Tannock Mackelvie, Sir George Grey and other citizens including some Auckland artists who donated their own work.

The gallery building originally housed municipal offices, the city library and the art gallery. In 1913, the council staff moved to offices in the new Auckland Town Hall. After interior alterations, the gallery building became a combined art gallery and library. In 1915 an Auckland citizen, Henry Edward Partridge, donated his collection of Maori portraits by Gottfried Lindauer to the gallery on condition that Aucklanders raised £10,000 towards a fund for Belgian refugees from the early fighting of World War One.

The gallery's full collection today includes a few Old Masters; a very fine English selection including Fuseli and Turner and several notable portraits; work by William Hodges from James Cook voyages; a particularly strong 19th century collection including the work of Sharpe, Kinder and Hoyte; and an excellent modern NZ collection including comprehensive holdings of Frances Hodgkins and Colin McCahon. Auckland continues to acquire the work of contemporary artists, both painters and sculptors.

The first stage of a redevelopment programme for the gallery began in 1967 with money from the Edmiston Trust which was established with a £100,000 bequest by Mr P A Edmiston in 1946. This stage took four years. A second stage, costing \$7 million, was completed from 1980 through 1984.

AUCKLAND HARBOUR BRIDGE

```

}
```

Auckland Harbour Bridge spans Waitemata Harbour between Freeman's Bay on the southern side and Northcote on the northern. The bridge took four years to build and was opened with four traffic lanes on 30 May 1959. Two more lanes in each direction were opened in 1969, having been built on the outside of the spans by Japanese contractors, Ishikawajima-Harima Heavy Industries Ltd (hence the nickname 'Nippon clip-on'). The steelwork of the bridge is 1,150 m long with a main span rising 43.27 m above high-tide level across 243.8 m. The bridge carried an average of nearly 27,000 vehicles both ways during its first year of operation. The daily average is now 132,000 both ways, with peaks as high as 160,000. The bridge gave an enormous commercial boost to sleepy North Shore suburbs linked previously by ferries and buses, and it resulted in the mushrooming growth of North Shore City.

AUCKLAND INSTITUTE AND MUSEUM

```

Auckland Institute and Museum was founded and opened to the public in 1852. The first museum building was a small cottage in what is now the grounds of the University of Auckland.

In 1968, the Auckland Institute, a learned society which had been founded the previous year, became affiliated to the newly established NZ Institute, a scientific body modelled on the Royal Society of Great Britain. Among the purposes of the institute was the establishment of a museum, and objects for a collection were presented at its first meeting. In 1869 the Superintendent of Auckland Province formally transferred the old Auckland museum to the control of the institute and the organisation took its present name.

After World War One the citizens of Auckland Province agreed to erect a new building for the museum to act as a memorial to those from the province who had been killed during the war. The Auckland War Memorial Museum was then built on the hilltop site in the Auckland Domain where it stands today. It was officially opened in 1929. It was expanded as the provincial war memorial after World War Two with extensions opened in 1960. The building was completed in its present form with the opening of the auditorium in 1969. A five-year, \$40 million project to refurbish the museum's interior and redesign galleries began in 1995.

The Auckland Institute and Museum members are elected by local authorities and by members of the institute. Operating finance comes from a levy on local authorities in the Auckland region, and from endowments, grants, gifts, bequests and commercial concessions.

The museum concentrates primarily on Maori and general ethnology and NZ and Pacific archaeology, botany, zoology and general natural history, the decorative arts and military history. The museum maintains a major historical and scientific library which is available to research workers and the public. There is also a planetarium.

The museum commands probably the best building site in the city, with spectacular views.

Auckland Islands, a sub-Antarctic group 320 km south of Stewart Island, were named after the same Lord Auckland who gave his name to the city and province of Auckland. The group was discovered by Captain Abraham Bristow in his whaling ship, *Ocean*, in 1806. The group (one large island and five smaller) has been the scene of a number of shipwrecks, the most famous of which was the *General Grant* in 1866. Attempts to retrieve treasure aboard the ship began within a few years of its loss and have continued over the years.

AUCKLAND RACING CLUB

```

Auckland Racing Club dates from 1874 but the first recorded race meeting in Auckland was held in January of 1842, less than eight months after NZ was declared a colony. Early meetings were held at Epsom, either at Potter's Paddock, which became the Alexandra Park trotting course, or on an adjoining property. In 1857 the first meeting was held at Ellerslie, then the property of Mr Robert Graham, and this became the regular venue of Auckland racing from 1867.

Early attempts at forming a racing club were variously named the New Ulster Jockey Club, the Auckland Jockey Club and the Auckland Turf Club. In 1874 the latter two bodies were amalgamated to form the Auckland Racing Club, with Mr James Watt as the first president.

By the 1950s, the Auckland Racing Club was firmly established as NZ's major racing club and the Auckland Cup as the high-stakes glamour event in the country.

AUCKLAND UNIVERSITY

(see University of Auckland)

AUNT DAISY

(see Basham, Maud Ruby)

AURORA AUSTRALIS

Aurora Australis, lights in the southern skies, were first recorded by Captain Cook during his voyage of 1773. They are caused by atomic particles from the sun being deflected by the earth's magnetic field (which makes aurorae most often, but not exclusively, seen nearer the polar regions). In the northern hemisphere, the phenomenon is known as aurora borealis. Intense auroral activity can cause problems for short-wave radio.

**AUSTRALIA NEW ZEALAND CLOSER ECONOMIC RELATIONS
TRADE AGREEMENT**

(see CER)

AUSTRALIAN BELL-MAGPIES

Australian Bell-magpies (Cracticidae) were liberated widely throughout NZ from Australia between 1850 and 1880. The black-backed magpie (*Gymnorhina tibicen*) has not increased at the same rate as the white-backed magpie (*G. hypoleuca*). The black-backed is strongly entrenched in various areas of the country, notably Hawke's Bay and Marlborough, whereas the white-backed ranges more widely. In some areas both species co-exist and sometimes they crossbreed. Magpies live in grasslands with patches of pine and gum trees. They nest during June-July, usually in tall trees, and they lay two to five bluish-green eggs, variably marked.

AUTOMOBILE ASSOCIATIONS

Automobile Associations were born in Auckland on 26 May 1902, when a meeting of seven motor car enthusiasts decided to form a car club named the Auckland Automobile Association. Over the following three years, associations were formed in Christchurch, Nelson, Otago and Wellington.

The early organisations were concerned with transforming public attitudes towards the motor car which was at first regarded as an interesting plaything of the rich and the eccentric, and a nuisance to the normal horse-drawn traffic. The members fought for improved roads, for responsible, licensed driving, and they organised rallies for car-owners (as far as Rotorua from Auckland in 1903).

Associations started up all over the country in the years leading up to World War One. After the war, a South Island Motor Union was formed in 1920, and a North Island Motor Union in 1924, and these were amalgamated in the NZ Automobile Association in 1965.

Early membership was slow in building up. After ten years the Auckland association had only 113 members. There were periods of sharp growth between 1925 and 1930 and between 1935 and 1940, but the real membership boom came after World War Two. Membership in NZ stood at 166,374 in 1950, 326,779 in 1960, 476,528 in 1970 and 567,239 in 1980, and now exceeds 720,000.

As numbers grew, the associations were able to broaden the range of services available to members, which today include: emergency break-down assistance, vehicle inspection, maps and guides for touring, finance and insurance, legal assistance, road signposting, car storage and overseas and domestic travel bookings.

Until 1991, the association was a grouping of individual clubs spread through the country, at one time numbering 15. The clubs amalgamated into one NZ Automobile Association in 1991, with the head office based in Auckland. The motivation was to achieve a greater range of services on a nationally consistent basis. In July 1994, the association set up its own insurance company, AA-GIO Insurance Ltd, in partnership with GIO Australia.

Commercial Aviation

Air Services

Navigation Facilities

Aviation accidents

Aviation got off to an early start in NZ with Richard Pearse of Canterbury getting a home-made aircraft aloft for a brief period at some time not precisely known about 1903 or 1904, and Vivian Walsh achieving the first documented, controlled flight in a heavier-than-air machine in 1911. Walsh and his brother, Leo, designed and built a seaplane and their NZ School at Mission Bay in Auckland trained pilots for service with the Royal Flying Corps during World War One. The Canterbury Aviation Company at Sockburn, near Christchurch, also trained pilots for war service.

The first airmail was carried from Auckland to Dargaville and return in 1919 but there was surprisingly little interest in aviation during the decade following the war, mainly because of a number of fatal accidents. The successful crossing of the Tasman Sea by the Australian aviator Charles Kingsford Smith (later Sir Charles) in September 1928 revived interest and about that time the government began to subsidise aero clubs which set up flying schools around the country.

In 1936 a 26-year-old Auckland woman, Jean Batten, astonished the world with a record-breaking solo flight from England to Sydney, and continued on home across the Tasman Sea in her single-engine plane.

```

The first real sign that commercial aviation might soon end NZ's isolation at the bottom of the world came in March 1937 with the arrival in Auckland of a Pan American World Airways flying-boat under the command of Captain Edwin Musick at the end of a survey flight from San Francisco. By 1940 Pan Am had begun regular airmail and passenger services between the two cities. NZ's first international airline, Tasman Empire Airways Ltd (*see* Air New Zealand) grew out of the first commercial trans-Tasman crossing by an Imperial Airways flying-boat in December 1937.

Enormous advances were made in aviation during World War Two and in 1945 the three companies operating the principal air services in this country — Union Airways (a subsidiary of the Union Steam Ship Company), Cook Strait Airways and Air Travel (NZ) Ltd — were taken over by the government under the NZ Airways Act and became the NZ National Airways Corporation (NAC). The major NZ-based commercial passenger services were conducted by TEAL (which became Air NZ in 1965) and NAC until the two were merged within Air New Zealand in 1978. NAC had a virtual monopoly on domestic passenger services with links among all provincial cities and the larger towns. Mt Cook Airlines, a tourism-orientated service, has become a second-level carrier in recent years. As rising fuel and administration costs forced Air NZ to reappraise its domestic services, a growing number of third-level operators surfaced but most have now been taken over by Air NZ or Ansett NZ as feeder services.

Ansett NZ — at first half-owned by Ansett Australia and two NZ shareholders — entered the domestic market in 1987 and was immediately a front-line competitor for Air NZ. It became a wholly-owned subsidiary of Ansett Australia in 1988 and by then matched Air NZ on all major routes.

AVIATION - Air Services

Because of the long, slim shape of NZ and its rugged topography, air services have long been an important domestic transport link. All provincial cities have domestic airports with passenger terminals and there are international airports at Auckland (Mangere), Wellington (Rongotai) and Christchurch (Harewood). All three international and six of the provincial airports are operated by airport companies with a mix of local government ownership.

NZ has deregulated air services, allowing virtually free access to the country by foreign carriers. Regular international services into Wellington are limited to trans-Tasman flights.

Auckland, the main international gateway, has direct services with Pacific nations and Europe and connections to all major countries. As well as Air NZ, other airlines with services through Auckland are Qantas, British Airways, Cathay Pacific, United Airlines, Korean Air, Japan Airlines, Singapore Airlines, Aerolineas Argentinas, Air Pacific, Air Caledonie, Garuda Indonesia, Mandarin Airlines, Air Vanuatu, Royal Tongan Airlines, Malaysian Airline System, Thai Airways, Polynesian Airlines, Air Nauru and Solomon Airlines. Pan American Airways sold its South Pacific routes to United Airlines in the 1980s and United is now the sole US carrier servicing NZ.

American Airlines has twice since the 1970s tried services between the US and NZ and each time has withdrawn after a brief period. Another major US carrier, Continental Airlines, withdrew in 1993 after 14 years.

AVIATION - Navigation Facilities

Responsibility for all air traffic control services and navigation facilities in the country lies with the Airways Corporation of NZ. These facilities include non-directional medium frequency beacons, very high frequency omni-directional radio ranges (DVOR), instrument landing systems (ILS), primary surveillance radar (PSR), secondary surveillance radar (SSR), precision approach path indicator (PAPI), distance measuring equipment (DME) and very high frequency direction finding equipment ((VDF). The corporation operates the national aviation training centre in Christchurch.

The regulatory authority is the Civil Aviation Authority of NZ (CAA), a Crown-owned entity which reports directly to the Minister of Transport. CAA is responsible for policy advice to government, operator licensing, safety and security and air accident investigation.

Aviation accidents have occurred in NZ since the beginning of flying here, but most have involved either small aircraft or commercial passenger aircraft on training exercises.

The first accident involving a commercial airliner and resulting in a substantial loss of life occurred on 23 October 1948, when a Lockheed Electra airliner operated by National Airways crashed on Mt Ruapehu on its way from Palmerston North to Hamilton. Thirteen passengers and crew died and it was seven days after the crash that the wreckage was finally found — largely because bad weather impeded searchers. Much of the wreckage was buried in snow less than 1,000 m below Ruapehu's summit. The name of the aircraft was Kaka.

On 18 March 1949 an NAC Lodestar, named *Kereru*, crashed 500 m up on a ridge in the Tararua foothills above Waikanae, en route from Whenuapai to Paraparaumu. Fifteen lives were lost.

On 3 July 1963 an NAC Dakota DC3 crashed about 800 m up Mt Ngatamahinerua, in the Kaimai Range, en route from Auckland to Tauranga. All 22 passengers and crew were killed. This was the worst air accident in the history of NZ aviation until an Air NZ DC10 crashed into Mt Erebus in 1979, killing 257 passengers and crew.

Lesser disasters included the death of six people in a Bay of Plenty Airways Aero Commander passenger plane which also crashed into Ruapehu on 21 November 1961; the loss of 11 airmen on 9 June 1942 when an American Flying Fortress crashed soon after taking off from Whenuapai, near Auckland, at midnight. Although the crash and subsequent explosion of armaments aboard the aircraft disturbed a large number of people in the area, official disclosure of the disaster was not made until a year later. Among other wartime accidents which were kept secret were the crash of a Liberator Bomber, also near Whenuapai, in 1943, in which 14 of 16 airmen aboard were killed, and the disappearance off the coast of NZ in August 1944 of two Lockheed Hudson Bombers of the Royal New Zealand Air Force.

The first two accidents associated with loss of life involving regular passenger services occurred in 1942. In May a Wellington-Nelson aircraft crashed into Mt Richmond near Nelson with a crew of two and three passengers, all of whom were killed; and in December four passengers were drowned in an aircraft which crashed into the sea en route from Westport to Nelson. The pilot was rescued by a passing ship.

The number of small aircraft (including micro-lights) operating in NZ has grown hugely since 1980 and this has led to a generally increasing number of accidents, some of them fatal. Helicopters, extensively engaged in a variety of commercial operations — from rescue work and supply delivery to carrying tourists on spotting trips through South Island scenic regions

— are involved in occasional fatal crashes (one death in 1992, for example, and seven in 1993). Small fixed-wing aircraft on private journeys or commercial and training operations are also involved in accidents each year (six fatalities in 1992, for example, and 13 in 1993). Three passengers and a flight attendant were killed when an Ansett NZ Dash-8 aircraft crashed on approach to Palmerston North airport in June 1995.

Aviemore hydro-electric power station was the third hydro-electric plant built on the Waitaki River, with work starting in 1962 and generation starting in 1968. It has a capacity of 220 MW. It is 19 km downstream from the Benmore hydro-electric station and 6 km upstream from the Waitaki station.

Lake Aviemore, artificially created by the power station dam, is the second largest lake of its type in NZ. It is 29 km², in area and extends 19 km all the way back to Benmore dam.

AYLMER, Isabella

Isabella Aylmer was an Englishwoman who wrote the second NZ novel, *Distant Homes; or the Graham Family in NZ* published in 1862, and described 100 years later by NZ critic Joan Stevens as ‘an artless story, thick with sentiment, comically inaccurate, stuffed with cliches, yet revealing here and there tantalising glimpses of the truth’. Mrs Aylmer never visited NZ but corresponded with the Rev William Joseph Aylmer and his family, who had arrived in Canterbury in 1851 and was the first minister in Akaroa.

Ayrshire cattle comprise two per cent of the national herd, the third most common dairy breed in NZ, behind Holstein-Friesian and Jersey. The Ayrshire Cattle Breeders' Association of NZ claims the breed produces a higher ratio of protein to butterfat than others, but the growth in population is declining very slightly each year in comparison with the two major breeds. It is most favoured by South Island farmers where it makes up three per cent of herds. Ayrshires first arrived in NZ from Scotland in 1848, and they have been a significant part of the national dairy herd since the turn of the century.

ADAMSON, Thomas

Thomas Adamson (1847-1913) was born at Wanganui, joined the militia aged 16, became an expert bush fighter and was awarded the New Zealand Cross for gallantry in 1876 for an action at Ahikereru in May 1869. He was seriously wounded in the clash. He later farmed near Taihape.

ALLEN, William Robert (Jim)

William Robert (Jim) Allen (1922-) was born in Wellington, educated in the Wairarapa and later at Wellington Technical College before World War Two intervened. After serving with the NZ forces in Egypt and Italy, he attended Perugia University and the Istituto della Artisti in Florence before returning to NZ and completing a Fine Arts degree at Canterbury School of Fine Arts in 1948. He was awarded the New Zealand Art Society Travelling Scholarship and attended the Royal College of Art in London, graduating with honours in sculpture. On returning to NZ he was appointed to the Elam School of Fine Arts in 1960.

AUSTIN, Samuel

Samuel Austin (1829-1903) was born in Ireland and came to NZ as a professional soldier with the 65th Regiment. He took his discharge as a sergeant in 1859 and settled in Wanganui. While serving with the Wanganui Native Contingent in 1866 at the capture of Putahi Pa, he rescued Lieutenant-Colonel McDonnell, who had been seriously wounded, and carried him to safety under heavy fire. He was awarded the New Zealand Cross.

BADMINTON

Badminton was first played in NZ about the turn of the century, when the Auckland Badminton Club was formed. It went into recess after a few years, and the game did not become popular again until the end of World War One, when a club was formed in Auckland. In 1921 the game was played for a while in Nelson, and during the 1920s it spread through most major and provincial cities in NZ.

Badminton became a national sport with the formation of the NZ Badminton Association, and the staging of national championships at Wanganui in 1927. NZ became one of the nine countries which formed the International Badminton Federation in 1934. But the game has never been a major sport here as it is in some Asian countries.

The dominant personality in NZ badminton history is J E Robson, who won nine men's singles titles between 1948 and 1960. His wife also won singles titles, and between them they won numerous doubles titles including three mixed doubles championships as a partnership. Another badminton family affair involved the Pursers, B R and R H, who were at the top nationally for a number of years and won a bronze medal in the men's doubles at the Edmonton Commonwealth Games in 1978.

Mrs R L Denton and S J Wilson won a bronze for the mixed doubles at the Brisbane Commonwealth Games.

BAG MOTH

```

Bag moth (*Liothula omnivora*), or case moth, caterpillars feed on a wide variety of shrubs and trees and are a familiar sight to most home gardeners as they drag their cumbersome cases around, often turning up inside houses or on telephone wires.

The long tapering case can be up to 80 mm long and is open at both ends. It is made chiefly of silk spun by the caterpillar as it grows, to which is added pieces of twig, leaf and bark. When mature, the case is firmly attached to a twig and the pupa forms within.

The male moth is black, extremely active, with a wingspan of about 30 mm. The moth cannot feed and spends its brief existence seeking the wingless female moth, a white grub-like creature which remains within the larval case. In spite of their impressive protection inside the case, the caterpillars suffer heavily from insect parasites.

BAILLIE, William David

William David Baillie, (1934–) was one of NZ's most versatile track and field stars who won NZ titles over 880 yds (804 m), one mile (1.6 km), three miles (4.8 km), six miles (9.6 km) and ten miles (16 km) (road), and became one of the early sub-four-minute milers in 1964. He first represented NZ in 1954 and for the last time in 1966. He never performed as well at international meets as his NZ form suggested he would and during the 1960s was overshadowed by the brilliant duo, Peter Snell and Murray Halberg.

BAILLIE, William Douglas Hall

William Douglas Hall Baillie (1827–1922) was born at New Brunswick, Canada, of a Scottish family which had lived in Ireland for many years. He won a commission in the British Army and served in India for six years before resigning in 1857 to come to NZ, where he settled on a sheep station at Wairau. Experienced in provincial politics, he was appointed to the Legislative Council in March 1861 and remained a member until his death in February 1922, making him the longest-serving member of the council in its history. He was also the last of the life members of the council. Although troubled by failing eyesight from the 1890s, Baillie regularly sat on the council until 1919.

BAKER, Erin

Erin Baker (1964–), NZ's most successful triathlete, totally dominated the triathlon scene from the late 1980s to the early 1990s. She entered and won her first triathlon at the age of 20, and at 21 convincingly won the world middle-distance championship in Nice, the venue for further world titles in 1986 and 1988, although she was controversially disqualified from the 1986 contest. She won the triathlon short-course championship in 1987, 1988 and 1989, Ironman in 1987 and in 1990 and the World Cup in 1988 and the world duathlon championship in 1991. She was named NZ Sportsman of the Year in 1989 and Triathlete of the Decade by US magazine *Triathlete* in 1993.

In 1989 Baker set her sights in becoming a 10,000 m or marathon runner due to the lack of recognition for the sport of triathlon. She failed to make it to either the Commonwealth or Olympic Games.

She is part of a sporting family with three other champion sisters: Philippa won single and double sculls world rowing titles, Kathy was a national backstroke and freestyle champion; and Maureen is a national aerobics champion.

BAKER, Louisa Alice

Louisa Alice Baker (1858–1926), née Dawson, lived in Dunedin and for some years contributed to the *Otago Witness* under the pseudonym ‘Alice.’ She went to England in 1894 where her first novel, *A Daughter of the King*, was published under the pseudonym ‘Alien’. She had another 15 novels published in London between 1894 and 1913, some of them becoming popular enough to be reprinted. She had advanced social views. Her work has been described by critic Joan Stevens as ‘earnest, feminist and religious, in spite of a mildly erotic flavour’.

BAKER, Richard St Barbe

Richard St Barbe Baker (1889–1982) was an English-born silviculturist who was educated at the University of Saskatchewan, Cambridge and Oxford (where he undertook post-graduate forestry study) and became assistant conservator of forests in Kenya from 1920–23, and in Nigeria from 1924–29. After a world lecture tour on the conservation of trees in 1931, he founded ‘Men of Trees’ societies in many countries and gave support to other conservation groups. He retired to NZ in 1964 but continued travelling widely for a few years promoting conservation. He settled at Lake Tekapo but died in Canada on a visit to the University of Saskatchewan.

BAKER, Shirley Waldemar

Shirley Waldemar Baker (1836–1903) was born in London and trained for the Anglican ministry. After emigrating to Australia, he joined the Wesleyan church and was sent as a missionary to Tonga. Ten years later, he became premier and chief adviser to King George of Tonga. He was responsible for many reforms to the old tribal system and these were embodied in a constitution. There was some opposition to his regime, however, and after an assassination attempt, he was deported by the British High Commissioner for the Western Pacific and lived for some years in Auckland. He later returned to do religious work in Tonga and died there.

BALCLUTHA

Balclutha is a South Otago town of 4,100 people that straddles the Clutha River, 85 km south-west of Dunedin. It is situated on alluvial river flats and is a servicing town for a sheep farming region, with some dairying nearby. The first settler was James McNeil in 1852. Five years later a ferry service was set up, giving the settlement its first name, Clutha Ferry, but a bridge was built across the river in 1868 and the town declared a borough in 1870. The name 'Balclutha' is from the Gaelic, meaning 'town on the Clyde', after Glasgow on the Clyde in Scotland. It was first suggested in an article in *The NZ Journal*, published in London in 1846, but not applied in general until the settlement grew past its river ferry days. Balclutha is administered by the Clutha District Council whose head office is in the town.

James Melville Balfour (1831–69), a cousin of the author, Robert Louis Stevenson, was born in Edinburgh and had wide experience as a marine engineer and lighthouse builder in Britain before coming to NZ in 1863 under a three-year contract to the Otago Provincial Government. In 1867 he was appointed marine engineer to the colony and designed lighthouses for Farewell Spit and Cape Campbell, planned the harbour works for Timaru and carried out a marine survey of the coast of Taranaki. He drowned landing at Oamaru. Balfour, a settlement on the Waimea Plains, 43 km north-west of Gore, was named after him.

BALL, Murray

Murray Ball (1939–) is NZ's most successful strip cartoonist — the creator of 'Footrot Flats' and its celebrated inhabitants, 'Dog' and 'Wal'. Born in Feilding, he attended secondary school in South Africa but returned to NZ as soon as he left school and joined the *Dominion* as a cadet reporter. Later, he moved to his birthplace, Feilding, and after submitting some cartoons to the *Manawatu Times*, he was hired as staff cartoonist.

His first published strip, 'Stanley', appeared in the *NZ Listener* in the late 1960s and in 1969 he went to London where the cartoon was accepted by *Punch*. Ball had arrived. During five years in Britain, he had a number of strips published and he illustrated comic papers. 'Stanley' was syndicated in several countries and over the years became *Punch's* longest-running strip.

On his return, Ball settled in Gisborne. He began 'Footrot Flats' in 1975 and after it had been turned down by the *Gisborne Herald* it was accepted by the *Evening Post* in Wellington. It became syndicated through more than 120 publications worldwide. Sales of 'Footrot Flats' books are in the millions.

The strip was translated into a stage musical which was a resounding success in both NZ and Australia. It was also made into a cartoon feature film for the cinema, in collaboration with master playwright Roger Hall. However, Ball announced in 1994 that he had decided to stop the strip.

He has written three satirical novels, *Fifteen Men on a Dead Man's Chest*, and *The Peoplemakers*, both published between 1965 and 1969, and *Quentin Hankey — Traitor* in 1986.

Ball's father was an All Black three-quarter during the 1930s and the cartoonist himself was a brilliant attacking mid-field back. He represented Manawatu and Wellington and played for the NZ Junior All Blacks against the touring Lions in 1959. He was a final trialist but failed to make the All Black team which toured South Africa in 1960. He gave up serious rugby in the early 1960s.

BALLANCE, John

```
{ewc

b0120pas.dib
}
```

John Ballance (1839–93) was Prime Minister of NZ for less than three years but is remembered as a kindly, progressive leader who set the course for the country's journey of legislative discovery over the following half-century. He was born in County Antrim, Northern Ireland, the son of a farmer. He served an apprenticeship as an ironmonger, and from the age of 18 to 27 worked as an ironmonger in Birmingham where he attended history and politics classes and earned a reputation as a speaker and journalist.

He migrated to NZ in 1866, settled in Wanganui and, because he could not afford to buy land to begin farming, opened a jeweller's shop.

Within a year of his arrival in Wanganui, Ballance and a partner, A D Willis, started the *Wanganui Herald*, a tri-weekly newspaper which he later owned himself. He helped to form the Wanganui Cavalry in 1868 and, although commissioned, acted as war correspondent for his own newspaper. He was so heavily critical of government policy in the war against the Maori that he was arrested and threatened with court martial, but he apologised and charges were withdrawn and so was his commission.

He was elected a member of the House of Representatives for Rangitikei in 1875 and became the member for Wanganui in 1879. He was defeated in 1881 because of his sympathy for the Maori pacifist Te Whiti, but regained the seat in 1884 and held it until his death.

Ballance's first cabinet posts were as Colonial Treasurer, Commissioner for Customs and Minister of Education in Sir George Grey's administration in 1878; and he held the portfolios of Lands, Defence and Native Affairs in the Stout-Vogel administration, 1884–87. After three years in opposition, Ballance became Prime Minister, Colonial Treasurer and Commissioner of Customs in the Liberal government elected to power in 1890. This administration was full of tyro legislators, many of whom are now substantial names in NZ history — Richard Seddon, John Mckenzie, William Pember Reeves, Joseph Ward and James Carroll — and this ministry was responsible for some of the most advanced social legislation in the world.

Ballance was a rare politician in that he was kindly and gentle but also determined and sincere. He became seriously ill during 1892 and died in April the following year.

Ballance is the name of a farming locality in the northern Wairarapa, 11 km north-west of Pahiatua, which was one of a number of special village settlements designed by the Liberals during Ballance's term as Minister of Lands to get more people on the land and reduce unemployment.

BALLANTRAE, Brigadier Lord

Brigadier Lord Ballantrae (1911–80), formerly Sir Bernard Fergusson, was a soldier, a writer and Governor-General of NZ from 1962–67. He was the third generation of his family to be either Governor or Governor-General of NZ, the younger son of General Sir Charles Fergusson (third Governor-General) and grandson of Sir James Fergusson (eighth Governor). Sir Bernard was educated at Eton and Sandhurst, joined the Black Watch and served with distinction in the Middle East, India and Burma during World War Two. His writings included verse, *Lowland Soldier* (1945); history, *The Watery Maze: The Story of Combined Operations* (1961); and biography, *Wavell: Portrait of a Soldier* (1961). He also wrote hundreds of articles. When he was made a life peer in 1972, he took the title Brigadier Lord Ballantrae of Auchairne and the Bay of Islands (NZ).

Ballantyne and Company, a department store building in Colombo Street, Christchurch, was the scene of one of NZ's most disastrous fires late in the afternoon of 18 November 1947. All the 41 who died were members of the staff. Damage was put at \$1 million. The company is still trading today.

BALLANTYNE, David Watt

David Watt Ballantyne (1924–86) was born in Auckland, educated in Gisborne and, when he was only 24, his first novel, *The Cunninghams*, became a celebrated addition to serious NZ literature. Other novels were *The Last Pioneer* (1963), *A Friend of the Family* (1966), *Sydney Bridge Upside Down* (1968), *The Talkback Man* (1978) and *The Penfriend* (1980). A collection of short stories, *And the Glory*, was published in 1963. Ballantyne was a journalist in Auckland, Wellington and London where he lived from 1955–63. He also wrote successful television plays.

BALLET

```

b0160pas.dib
}
```

Ballet in NZ, like most of the performing arts at professional level, was almost entirely imported from overseas until after World War Two.

Dance performances of varying degrees of artistry and sophistication were given by local amateurs, mostly children, in recitals held annually in many NZ towns from relatively early days of settlement, and dancing was part of many theatrical performances, both by amateur and visiting professional companies.

The first full-length ballet of international professional standard was performed here in 1926 when the world famous ballerina, Anna Pavlova, backed by a full company of international dancers, was brought to NZ by J C Williamson Theatres, the organisation that was behind most NZ professional theatrical tours in the years between the world wars. The choreographer was the internationally acclaimed Michel Fokine, and among the soloists with the Pavlova company was an NZer, Thurza Rogers. The performances were a revelation to NZers, as they had been to Australians during the first part of the company's South Pacific tour.

The success of the tour ensured that J C Williamson Theatres would sponsor future visits from international companies although it was not for another ten years that Colonel de Basil's Ballets Russes de Monto Carlo came. This was not his premier troupe but two years later, in 1939, his first company, the Covent Garden Russian Ballet came here.

After World War Two, interest quickened with tours by the Borovansky Ballet and the Australian National Ballet and the government began making bursary grants to promising NZ dancers to enable them to study and gain experience overseas.

The NZ Ballet Company was formed in 1954 by Poul Gnatt, a former principal *danseur* with the Royal Danish Ballet. At the time he was conducting a ballet school in Auckland for the Regional Council for Adult Education. The company was helped by a national tour in 1959 of the Royal Ballet headed by Dame Margot Fonteyn which attracted huge and enthusiastic audiences. The government-sponsored Arts Advisory Council — forerunner of the Queen Elizabeth II Arts Council and the present Arts Council — was set up in 1960 and began funding the company that year.

The result was the NZ Ballet Company's first national tour starring Sara Neil, an NZer who had been a soloist with the Royal Ballet, and Russell Kerr, home after ten years with Sadlers Wells Ballet, Ballet Rambert and the London Festival Ballet. Among the NZ dancers were Graeme Pickering and Gloria Young, who later became successful international dancers. Kerr was soon to become artistic director of the NZ Ballet Company and, with Gnatt, devised new ballets performed by the company along with the repertoire of standard works.

The 1960s were a golden era for ballet on a national scale with the company touring most years. The interest it stimulated gave strength to smaller companies such as the Wellington City Ballet and Auckland's Ballet Workshop and United Ballet Company.

Petone-born Jon Trimmer, a brilliant world-class dancer, revitalised NZ ballet in the 1970s and continued as the head of the company until the 1990s. He first danced for the Royal NZ Ballet in his late teens in 1958 before attending the Royal Ballet School in London and later touring with the Australian Ballet and other international companies

Even for the most experienced and skilled professionals, ballet has always been a precarious living in NZ, with a small widely spread population. The most famous dancers from this country are Rowena Jackson who became a principal dancer with an international reputation, and Alex Grant and Bryan Ashbridge. All three were members of the Royal Ballet.

The Royal NZ Ballet Company, as it came to be called, had varied success artistically and financially, but faced a number of serious financial crises during the 1970s and 1980s as the cost of touring climbed and the competition for arts funding increased. It toured Fiji, Australia and China in the mid-1980s, as well as NZ, but its activities have been severely constrained by lack of finance.

Since the late 1970s, modern dance has captured the attention of NZ audiences and many dancers. Performances are much less costly to stage than the traditional ballet repertoire which requires larger companies, substantial musical support, full theatrical facilities and expensive sets and costumes. The Auckland dance company, 'Limbs', performed in many parts of the country and also in Australia, the United States and other countries.

BALLOONING

```
{ewc
MVIMG,
MVIMAGE,
[HOTMACR
O=MVJump(
"B0170PG",
TOPIC")]!
b0170pbs.dib
}
```

Ballooning was a major source of entertainment for NZers for 25 years before World War One, from the time a ‘Professor’ Baldwin first ascended from the Caledonian sports ground in Dunedin. This was in 1889 — only 49 years after the signing of the Treaty of Waitangi — and for NZ it was the beginning of the age of aviation. Some were ‘Professors’ and some called themselves ‘captains’, but these men were all essentially showbiz. They came from many parts of the world and used their balloon carriages as stages, running through a repertoire of tricks.

The balloons were filled with hot air from a fire under the bag or with coal-gas from the local gas works. Either way, the pursuit was a dangerous one from the beginning of the inflation until the descent at the end of the show.

Despite the dangers, accidents were not common. But in 1899, a ‘Captain Lorraine’ lost control of his balloon after his parachute accidentally tripped and became hopelessly fouled on take-off in Christchurch. The balloon disappeared over the Port Hills as the young man wrestled to bring about a controlled descent. He came down off the shore and was drowned as he attempted to swim to land. ‘Captain Lorraine’ was actually a young Auckland named Mahoney.

Once the novelty of ballooning wore off and fixed-wing aircraft took over any transport potential, it became more of a sport which has bursts of popularity from time to time. The first registered balloon in NZ was owned by Jack Hanlon of Dunedin with ZK-FBA, ZK signifying a NZ balloon, FB a free balloon, and A the first on the register.

A NZ altitude record was set in 1975, when Roly Parsons took his balloon, named ‘West Wind’, to 4,724 m in a flight over Westland National Park. Co-pilot was Rolf Dennler of Switzerland. The previous year, Parsons and co-pilot Neil Munro crossed the Southern Alps in a 100-km flight from Aickens on the West Coast to Waipara in Canterbury. In 1976, Parsons and co-pilot Rex Brereton made the first Cook Strait crossing by balloon, and also crossed over the summit of Mt Cook — with 300 m to spare.

BALNEAVIS, Henare Te Raumoa Huatahi

Henare Te Raumoa Huatahi Balneavis (1880–1940) was an outstanding Maori administrator, from 1909 until 1940 private secretary to all Ministers of Maori Affairs.

On his father's side, Balneavis was related to Henry Colin Balneavis, son of a Belgian-born former Governor of Malta, who came to NZ with the British Army in 1845 and spent the rest of his life here.

Henare Balneavis was educated at Te Aute College where he was an outstanding athlete, and he was later club champion at both the Hutt and the Miramar Golf Clubs. From 1922 until 1929 he was a member of the council of the NZ Golf Association.

He was for many years secretary of the Maori Purposes Fund Control Board, a member of the council and executive of the Polynesian Society and secretary of the Board of Maori Ethnological Research.

BANKING

```

}
```

Banking in NZ began with the establishment in 1840 of two trading banks, first the Union Bank of Australia at Britannia, Port Nicholson (near the mouth of the Hutt River), and later the NZ Banking Corporation at Kororareka in the Bay of Islands. The Union Bank survived not only the demise of Britannia but merged with the Bank of Australasia in 1951 to form the Australia and NZ Banking Group Ltd (ANZ). The NZ Banking Corporation failed after several years. The Bank of Australasia, with its head office in London, like that of the Union Bank, opened in NZ in 1864 with branches in Auckland, Christchurch and Dunedin. Other banks, such as the Colonial Bank of Issue, started in the colony but quickly fell into oblivion.

The Oriental Banking Corporation opened offices in the 1850s, then decided to withdraw just before gold was discovered and the Bank of New South Wales came in and took over Oriental's business in 1861 — the same year in which the Bank of NZ (BNZ) was founded in Auckland by local businessmen. In fact, it was the news that the Bank of New South Wales was to move in that prompted the patriotic response to Thomas Russell's proposal to start a NZ bank. In July 1861 the NZ Banking Act was passed and the new business, with a paid up capital of £100,000, opened up soon afterwards.

The National Bank of NZ opened in Dunedin in 1873, taking over the business of the Bank of Otago. The Commercial Bank of Australia Ltd (CBA) opened its first branch in Wellington in 1912. The Commercial merged with the Bank of New South Wales in 1981.

The first major crisis faced by the embryo banking system was an acute currency shortage during its first two decades. Governor FitzRoy attempted to fill the gap by issuing debentures but the British government disapproved. Local merchants stepped into the breach, however, issuing their own debentures and easing the situation for a time.

The banks did well during the gold rushes and the massive gold reserves at one stage were double the value of the note issue. It took the banks a long time to adjust to conditions in a country without secondary industry or any money market and they tended to get dangerously over-involved in advancing against land purchase and development. The National Bank of NZ and the BNZ both got into serious difficulties in 1895 and the government averted a disaster by going to the help of the BNZ. The Colonial Bank, based in the South Island, foundered.

The most substantial finance houses, apart from the trading banks, were the stock and station agents, who for many years acted as de facto bankers to farmers throughout the country.

For many years, there were only five trading banks: BNZ, ANZ Banking Group, National Bank of NZ, Bank of New South Wales and the Commercial Bank of Australia. (The Bank of NSW and the Commercial Bank merged in 1982 to form the Westpac Banking Corporation.) They were protected and highly regulated until 1987 when the government allowed other

banks to register.

The removal of controls saw 20 banks registered by the mid-1990s. The four trading banks had been joined by former savings banks like ASB Bank, Trust Bank, Countrywide and by a range of foreign banks.

Before the deregulation of the 1980s, the financial sector had been gradually expanding with an increase in the number of trustee savings banks in 1957, the establishment of private savings banks in 1964, the abolition of capital issues control on finance houses in 1962, the growth of merchant banking since 1971 and the general growth of building societies for a period in the 1970s and 1980s.

As a small country, NZ quickly adopted a national computerised clearing house system through Databank, a joint subsidiary company, that cleared cheques and credit cards. Most of the banks now have their own clearing-house operations, but with the swift adoption of automated teller machines (ATMs) in the early 1980s, and Electronic Funds Transfer at Point of Sale (EFTPOS) in 1984, NZ remains one of the most efficiently banked countries in the world. The banks integrated their EFTPOS services in 1990 and the use of the system began to accelerate then.

The Reserve Bank was established in 1933 as a privately owned institution, but three years later became a fully state-owned central bank with gradually expanding powers of control over the financial system.

The role of the bank has changed over the years and at present operates under the Reserve Bank of NZ Act of 1989. A board of directors includes the governor, the deputy governor and between four and seven non-executive directors, and its main functions are spelt out under the legislation as: acting as the country's central bank; formulating and implementing monetary policy to achieve price stability and keep inflation below two per cent a year; maintaining a sound financial system (including monitoring the prudential soundness of registered banks); and managing the note and coin issue.

Other important functions are: providing policy advice to the Minister of Finance; collecting data on the business of financial institutions; acting as a lender of the last resort; and implementing exchange rate policy. It also acts as a banker to settlement banks.

BANK OF NEW ZEALAND

```

b0200pas.dib
}
```

Bank of New Zealand was formed following a meeting in Auckland in June 1861 attended by leading businessmen from Auckland, Wellington and Dunedin, with Auckland's Thomas Russell in the chair. A prospectus was issued immediately providing for capital of £500,000 in £10 shares, half of the capital to be paid up. Russell, who was the MP for the City of Auckland East, introduced the NZ Bank Bill into the House of Representatives that same month. The private bill was passed and received the Royal Assent at the end of July.

The first offices were opened in Queen Street, Auckland, on 16 October 1861. Before the end of the following year branches were opened in New Plymouth, Nelson, Wellington, Picton, Blenheim, Christchurch, Lyttelton, Kaipoi, Timaru, Oamaru, Napier, Wanganui and Dunedin; and in London.

In 1865 the bank sponsored the launching of the NZ Loan and Mercantile Agency Co Ltd, a finance house and stock and station agency that had a solid influence on the development of the country over the following century.

The bank survived its first crisis — a run on gold in the Otago goldfields — in its first year, but generally it expanded.

During the 1880s, the bank went into a long period of turbulence. NZ's export prices slumped and the bank's profits were in decline, especially as a result of substantial losses in Australia, mainly in Adelaide and Sydney. Further losses because of over-valued securities led to the appointment of a committee of shareholders in 1888 to investigate the bank's position.

But it wasn't until 1894 that the bank went into severe crisis and it was saved only by one of its customers, the government. From the beginning of the year, the price of its shares had plunged because there was general knowledge that the bank was in trouble, but on 29 June the Bank of NZ Guarantee Bill was introduced into the House of Representatives as urgent legislation to rescue the foundering enterprise.

The government was empowered to take up shares worth £2 million and in January 1896 appointed its first director. In 1895 the bank had absorbed the Colonial Bank but the same year a Parliamentary committee of inquiry was set up to look into the conduct of the affairs of the BNZ since 1888. The inquiry lasted nearly six months and the president, William Watson, was arraigned before the Bar of the House of Representatives and then fined £500 for refusing to answer some questions on the grounds of confidentiality concerning clients' business. (Watson's association with the bank persisted, however, until his retirement as a director in 1939 at the age of 91.)

The committee's report was hard on senior employees and led to legislation in 1898

reconstituting the management structure and appointing some government directors.

There was a move immediately before World War One by shareholders to regain control and expand the private shareholding because the bank had weathered its prolonged storm but the bid was resisted by the government.

The Labour government nationalised the bank in 1945. There was a determined attempt after the change of government in 1949 to reverse the decision and revert to private shareholding, but no action was taken. It was privatised in the 1980s.

In its heyday at the end of the 1970s and beginning of the 1980s, BNZ did 40 per cent of the nation's banking business.

In 1987 the government sold the first parcel of its shareholding and the issue was over-subscribed. However, huge losses were reported later in the year and the share price slumped to less than half the par value. In July 1989 the government sold 30.6 per cent of the bank to Capital Markets. In November 1992 the National Australia Bank completed the privatisation of the BNZ by acquiring all the shares.

BANKRUPTCY

Bankruptcy occurs officially in NZ when a person is adjudged to owe more money than he or she can reasonably be expected to pay according to the value of his or her assets and income.

Proceedings begin when either the debtor or a creditor files a petition for bankruptcy in the High Court under the provisions of the Insolvency Act of 1967 and the Insolvency Regulations of 1970. Most years one-half to two-thirds of the bankruptcies in NZ are the result of debtors filing on their own behalf.

Once a person is declared bankrupt, the Official Assignee has a range of powers he may exercise. He or she may claim debts due to the bankrupt estate, sell the bankrupt's property in part-payment of debts, divide the property among the creditors, carry on the business of a bankrupt until it may successfully be wound up, or arrange for the bankrupt to carry on business on behalf of the creditors. Creditors may accept payment of a proportion of the amounts owed and if this is approved by the court, the bankruptcy is annulled.

Under normal circumstances, a bankrupt is discharged three years after the declaration of bankruptcy, unless the clearance has been made sooner by the court. On application, the court may grant a discharge from bankruptcy by an order which may be absolute, suspended or conditional. An application for discharge before the three years is up may be opposed by the Official Assignee or any creditor.

Company liquidation is carried out under provisions in the Companies Act 1955, the Companies (Winding Up) Rules 1956 and High Court Rules. If appropriate, a receiver may be appointed who controls the company, exercising the powers of the directors he automatically replaces.

Sir Joseph Banks (1743–1820) was an English botanist who travelled with James Cook on his first exploration of the South Pacific in 1769–70. His observations of life in NZ constitute among the most important early historical records. Banks was educated at Harrow and Eton and Oxford, and had travelled as a naturalist to Labrador, Newfoundland and Portugal aboard the *Niger* in 1766, before joining D C Solander, a Swedish botanist, on the first Cook voyage to the South Pacific. He and Solander collected specimens wherever the 1769–70 expedition paused and went ashore in NZ, Australia and various Pacific islands. His journal supplemented the observations of Cook in general and noted many details that only a naturalist would have observed. He became President of the Royal Society in 1778, a post he held for 42 years until his death.

Banks Peninsula emerges from the northern end of the Canterbury Bight. It was called Banks Island by James Cook (after the botanist Joseph Banks) when he concluded on his arrival off the coast there in February 1770 that it was cut off from the mainland. Cook's chart showing Banks Island was accepted until a new survey was done by the ship, *Pegasus*, in 1809. The peninsula is a steep, broken piece of land, once two offshore volcanoes that had erupted and left two large craters — occupied now by Lyttelton Harbour on the northern side and Akaroa Harbour to the south. Its coastline was used extensively by whalers in the 1830s and it was the centre of the earliest planned settlement in the South Island in the following decade.

BAPTIST CHURCH

Baptist Church membership in NZ is slightly more than two per cent of the population making it the fifth most numerous religious denomination, although it comes in as the sixth largest group in the census behind 'Christian' with no denomination named. The number of Baptists climbed from 68,000 in 1986 to 70,000 in 1991, but the percentage of the population remained the same. The Rev Decimus Dolamore, a Baptist minister from Yorkshire, established the first Baptist Church in the country at Nelson in 1851 and the church was firmly established in most settlements by the 1880s. A Baptist Union of NZ was formed in 1882 and has an annual assembly at which all branches may be represented according to their membership numbers.

BARKER, Alfred Charles

Alfred Charles Barker (1819–73) was a ship's surgeon on the *Charlotte Jane* which arrived in Lyttelton in 1850 with the original Canterbury settlers. He was a skilled artist and one of the country's first serious photographers. His sketches and photographs are preserved in the Christchurch Museum.

BARKER, Lady Mary Anne

```

Lady Mary Anne Barker (1831–1911) was born in Jamaica, the daughter of the Island Secretary, W G Stewart. She married Captain (later Sir) George Barker, a British Army officer serving in India, in 1852, and after his death in 1861, married Frederick Napier Broome, a Canterbury sheep farmer, in 1865. Broome was a writer and encouraged his wife to describe her experiences in NZ, after they had sold their property in 1869 and returned to England. Her *Station Life in NZ* was published in 1870, and was followed by *Travelling Over Old and New Ground* (1871), *A Christmas Cake in Four Quarters* (1872), *Station Amusements in NZ* (1873), *Letters to Guy* (1885) and *Colonial Memories* (1904). From 1875 Broome, accompanied by his wife, served in British colonial posts in Natal, Mauritius, Western Australia and Trinidad.

Lady Barker was one of the two or three most stylish early writers about NZ and is still anthologised in any collection of writing which includes early work. The critic, J C Reid, wrote that Lady Barker's *Station Life in NZ* was 'A charming book still extremely readable and showing taste, breeding, courage and humour.'

BARLEY

}
```

Barley is believed by some authorities to be the first cereal crop cultivated by man, and it has been grown in NZ since the earliest days of European settlement. When Charles Darwin visited the Waimate mission station in the Bay of Islands aboard the *Beagle*, in 1835, he noted ‘on an adjoining slope fine crops of barley and wheat were standing in full ear.’

Barley is harvested for the manufacture of beer, gin and whisky, and for processing into stock food. A very limited amount is used for direct human consumption, mostly as pearled barley. There are also small-scale plantings for use as a green feed for stock during periods of low pasture growth.

The area in barley hovered around 100,000 ha from about 1880 until World War One, then declined during the Depression. It is now around 68,000 ha, 48 per cent of the total area in grains and peas. Yields per hectare have fluctuated but have gradually improved over time. The biggest jump in barley production came between 1961–62 when it was 77,467 tonnes and 1971–72 when it was 260,000 tonnes. Annual production settled around that figure until 1980–81 when it jumped to its present level of around 320,000 tonnes. More than half the annual production comes from Canterbury, with Wellington, Otago, Southland and Hawke’s Bay the next largest producers.

Barnacles are common in NZ. The small acorn barnacles — enclosed in their grey-white shellcases and densely massed on any hard surfaces between the tides — are the most abundant sessile (permanently attached) animals of the seashore.

Although limpet-like in general appearance, they are true crustaceans of the sub-class Cirripedia. Once covered by the tide, the scutes at the apex of the cone open and the animals begin to feed by wafting small particles into their mouths using their modified legs.

Apart from the encrusting barnacles, of which there are many species, there are also stalked, or goose, barnacles which may be found attached to floating driftwood.

BARNICOAT, John Wallis

```

```

John Wallis Barnicoat (1814–1905) was born in Devonshire, qualified as a civil engineer and emigrated to Nelson in 1841, where he became a surveyor and was one of the few in the party to escape the Wairau massacre. In 1844 he was with Frederick Tuckett when the south-eastern coast of the South Island was surveyed to find a suitable site for the Dunedin settlement. He later settled on his own land near Nelson, was a founder of Nelson College and sat on the Provincial Council throughout its existence.

His daughter, **Constance Alice Barnicoat**, was a graduate of Canterbury University College, a linguist of distinction, and a journalist who served for a number of years as a foreign correspondent for English and NZ newspapers.

BARR, James

James Barr (1820–85) was born in Glasgow and arrived in NZ in 1849. He farmed for a few years in partnership with his brother, spent five years in New South Wales, and then established himself successfully as a businessman in Dunedin, launching some of the early building societies. He wrote many articles for Dunedin newspapers but is remembered mainly for his book, *The Old Identities* (1879). It is an historical look at the very early days of the Dunedin settlement and still reads well today.

BARR, John

John Barr (1809–89) was born in Paisley, Scotland, and emigrated to NZ in 1852, settling in Dunedin. He became a well-known poet and songwriter, contributing to the *Otago Witness* and *Saturday Advertiser*. His *Poems and Songs* was published in 1861 and revised and reissued in 1874. He inaugurated the Burns Club.

Barracouta (*Thyrsites atun*) is a long (up to 1 m), slim, edible fish widely spread through the southern hemisphere and, within NZ waters, most abundant off the South Island. It is a surface-schooling predator with needle-sharp teeth, noted for the frenzy with which it attacks its prey.

BARRATT-BOYES, Sir Brian Gerald

Sir Brian Gerald Barratt-Boyes (1924–) is a thoracic surgeon. He gained an international reputation as a pioneer in the field of heart repair, especially for children with congenital heart defects. He was born in Wellington, educated at Wellington College and Otago University, and during the 1950s was a visiting fellow at the Mayo Clinic in the US and Bristol University in the UK. He was for many years surgeon-in-charge of the cardio-thoracic surgical unit at Green Lane Hospital in Auckland, as well as a consultant surgeon, and honorary professor of surgery at Auckland University. Barratt-Boyes has himself undergone heart surgery.

Charles Decimus Barraud (1822–97) was the most accomplished artist in NZ during the pioneering period. He was born in England and trained as a pharmacist. He arrived in NZ in 1849, and opened a chemist's business in Lambton Quay, Wellington. He took an interest in philanthropic matters, and became the first president of the NZ Pharmacy Board. He travelled widely through the country industriously sketching and painting the landscape, including the Pink and White Terraces, and also completed a number of portraits of Maori chiefs. In 1875 he visited England for the publication in 1877 of a portfolio of lithographs in colour and black and white, entitled *NZ: Graphic and Descriptive*. The text was written by W T L Travers. Barraud was a foundation member and the first president of the NZ Academy of Fine Arts established in Wellington in 1889. He remained president until his death eight years later.

BARRETT, Richard

Richard Barrett (1807–47), known widely as ‘Dickie’, was a famous personality of early NZ. He arrived in this region in 1828 as the mate on a ship trading between Sydney and New Plymouth. He married Rawinia Waikaiua, of Taranaki's Ngati-te-Whiti tribe, settled on the west coast of the North Island and helped his wife’s people to repel an invasion by the powerful Waikato warriors in 1831.

He then became a whaler based on the shores of Tory Channel, Marlborough. When Colonel Wakefield and Edward Jerningham Wakefield arrived in Ship's Cove on their way to Port Nicholson with the first NZ Company settlers, Barrett accompanied the party as interpreter and helped negotiations for the Wellington land purchase, although this transaction was soon to cause Maori-European tensions.

Barrett Reef in Port Nicholson and Barrett Lagoon near New Plymouth were named after him. The lagoon is about 5 km south-west of New Plymouth within a 36 ha wildlife reserve which was donated to the state by a Mr Honeyfield, said to be a descendant of Barrett’s.

Barrett Reef, near the entrance to Wellington Harbour on the western side, and separated from the shore by Chaffers Passage, claimed the trans-Tasman passenger ship, *Wanganella*, in 1947, and the inter-island ferry vessel, *Wahine*, in 1968. The reef was named after the pioneer, Richard Barrett.

BARRY, Anne

Anne Barry (1952–) became the first NZ woman firefighter, in 1981, following a long battle against male prejudice. After seven years working in Fire Service control, she gained her diploma of fire engineering, but her application for transfer to the operational section was rejected on the grounds that she was under 5 ft 7 in and had sub-standard eyesight. However, her initial eye test had been faulty, and men had been accepted without height or eyesight standards.

Barry took her case to the Human Rights Commission, won, and became a Senior Firefighter Driver in Auckland. Other women have followed her into the fire service, although not in large numbers. Volunteer fire brigades, however, often include women.

BARRY, William Jackson

```
{ewc

}
```

William Jackson Barry (1819–1907) is believed to have been born in Dublin, to have arrived in Sydney as a convict at the age of ten and been assigned to a butcher there as a servant. At the expiry of his sentence he may have joined a bushranging gang, and then spent some time on the Victorian and Californian goldfields before arriving in Otago in 1861.

Confirmation of facts about Barry's life is not always easy. G H Scholefield's *A Dictionary of NZ Biography* (1940), and other reference works up to that time, contain varying accounts of his life and activities. The government *Encyclopaedia of NZ*, edited by A H McLintock and published in 1966, refers to him as 'NZ's Baron Munchausen'. Barry (or Berry as he once called himself) was an energetic, glib and colourful character who quite clearly did not let facts interfere with a good story.

He sold offal meats on the Tuapeka goldfield, and in Dunstan and Clyde, and in 1863 set up in partnership as a butcher in Cromwell, breaking a monopoly that existed at the time. He forced the price of meat down and was presented with a gold watch by the citizens of Cromwell in gratitude for this. In 1866 he was elected the first Mayor of Cromwell, was re-elected the following year and apparently played host to Sir George Grey during a visit to the town.

It was possibly this period of apparently respectable membership of the establishment that led some historians such as Scholefield to take Barry's own account of his life seriously.

In 1870 Barry gave a public lecture in Cromwell entitled 'Forty Years of Colonial Experience' and it enjoyed such a success that he spent the next ten years lecturing and writing in NZ, Australia and London where his book, *Ups and Downs* (having been edited and revised by Thomas Bracken), was published.

Back in NZ in 1880, Barry became something of a joke, touring with a showbiz lecture group which included 'Maori chiefs', an 'old whaler', and he plagiarised other people's lecture material. According to McLintock, Barry appeared in a boxing ring at the age of 65 and held successful 'farewell' concerts in Sydney (more than once), Melbourne and Adelaide. Another book, *Past and Present and Men of the Times*, was published when Barry was 79. Ten years later he died in Christchurch and Thomas Bracken wrote:

Who told about the wondrous ores

That lie around NZ's shores,

And showed Sir George his Cromwell boars?

Why, Captain Jackson Barry.

Barry was undoubtedly a 'con man', given to hyperbole, but he gave entertainment in return

for what money he may have charged. He was a likeable man with many friends.

BARTON, George Burnett

George Burnett Barton (1836–1901) was born in Sydney, qualified as a lawyer in London, practised law in Dunedin for a brief period from 1860, and in 1868 returned to succeed Sir Julius Vogel as editor of the *Otago Daily Times*. In 1871 he was committed for trial on criminal libel charges after claiming in an article, that appeared in the paper on 3 October 1870, that members of the government and officials of the Telegraph Department had delayed telegraphs addressed to the *Times* until the information had been provided to opposition newspapers that supported the government. The government dropped the prosecution after Barton resigned to attend to his case. He later returned to Australia. His brother, Sir Edmund Barton, was a Prime Minister and Chief Justice of Australia.

Maud Ruby Basham (1879–1963) was a broadcaster who became renowned throughout NZ as ‘Aunt Daisy’, starting her daily programme with a rumbustious ‘Good morning everyone’, followed by a brisk and breathless commentary on anyone and anything, invariably benign, and a ‘positive’ description of the weather in Wellington where she was based.

She was born in London, was brought to NZ at the age of ten, graduated as a teacher in three instead of the usual four years, qualifying with first prize for science. She became an accomplished singer, which gave her her first entrée to radio during an experimental broadcast in Wellington in 1923.

The 1.5 m tall Basham became a full-time professional broadcaster in Wellington with 2YA in 1933 to help support her family during the Depression, presenting musical and children’s programmes. Later she worked for 1ZB in Auckland for C G Scrimgeour (‘Uncle Scrim’) and helped with relief work at the station. In 1936 she began a ‘shopping reporter’ programme in the mornings with 1ZB Auckland and, the following year, moved to Wellington from where her morning programme, starting at 9 o’clock, became national and was listened to by hundreds of thousands of housewives in an era when few married women worked. It remained the most famous radio show in the country for 25 years until her death.

During two visits to the US, in 1935 and 1938, Aunt Daisy drew the attention of the news media as a dynamic radio broadcaster and she was remarkably popular with American servicemen during World War Two.

BASKETBALL

Basketball was originally a Canadian game which has for many years been one of the major professional spectator sports in the US, and an Olympic team sport which attracts teams from around the world.

It was first played in NZ in 1908, introduced in Wellington by the physical director of the Young Men's Christian Association (YMCA), Mr J J Greenwood. The game spread to Christchurch, Dunedin and then Auckland through the YMCA organisation in those centres, and it was successfully introduced to a number of girls' schools. By the early 1920s, there were enough teams to support small competition leagues in the four main centres and Hamilton and Invercargill.

In World War Two American servicemen training in NZ demonstrated the skills of top basketball, and later an increase in the number of Mormon missionaries coming here from Utah popularised the game and provided coaches.

NZ men's teams were chosen from 1947 and one of the outstanding early players was Allan Bruce, eight times in the national team from 1949–59, three times as captain. From 1970–79, John MacDonald was in nine national teams, captain in five years. The outstanding basketball player in recent years has been Stan Hill, first chosen in 1973 and consistently in the team for nearly 20 years then when available, often as captain. The team, now semi-professional, is called the 'Tall Blacks'.

National women's teams have been chosen since 1949 and among the outstanding players has been Lois Muir, six times chosen between 1956 and 1962, captain on three occasions. Later, she was to be the NZ netball selector/coach for many years.

The national basketball league has grown in recent years with a sponsored national men's competition, but not to the extent that may have been expected given the high television exposure of the American game, its famous players and its merchandising.

The game is controlled here by the NZ Basketball Federation which is affiliated to the International Amateur Basketball Federation and the Olympic and Commonwealth Games Association.

Cyril Royston Guyton Bassett (1892–1983), who won the Victoria Cross on Chunuk Bair Ridge, Gallipoli, was born in Auckland, educated at Auckland Grammar and Auckland Technical College and was a bank clerk before joining the army. Bassett was a corporal in the NZ Divisional Signals Company, and was one of the signallers in support of the attack by NZ, Gurkha and British soldiers on Chunuk Bair.

The NZers achieved the ridge despite horrendous losses and after trying to hold it were dislodged. Bassett was the first NZer to win the Victoria Cross in World War One. It was awarded for gallantry on 7 August 1915, when he kept lines of communication open to the men beleaguered by intense enemy fire on the ridge of Chunuk Bair.

Bastion Point (Takaparawhau) is a promontory at the western end of Mission Bay, 6 km east from the Auckland Central Post Office. It was originally Fort Bastion, overlooking as it does the entrance to Waitemata Harbour. It is the site of the Savage Memorial at the base of which lies the vault of Michael Joseph Savage, NZ's first Labour Prime Minister (1935–40). The Ngati-Whatua marae is on the point with an area of adjacent land whose ownership was disputed by the government and a group of Maori activists. Twice in the 1970s and 1980s, Maori groups protested by camping on the disputed land and were evicted by police following tense confrontations; with the result that Bastion Point became a symbol for Maori who resented the treatment their race had received historically on land ownership. The Bastion Point issue was resolved to the satisfaction of Maori by the Labour government during the 1980s.

BATHGATE, Alexander

Alexander Bathgate (1845–1930) came to NZ with his father, John Bathgate, in 1863 and worked in banking until he qualified as a barrister and solicitor in 1872. He helped establish the *Saturday Advertiser* with poet-journalist Thomas Bracken in 1875, became a director of the *Otago Daily Times* and, as an indefatigable writer, published a number of books including *Colonial Experiences, or Sketches of People and Places in the Province of Otago* (1874), *Waitaruna, a Story of NZ Life* (1881), *Far South Fancies* (1889), *The Legend of the Wandering Lake* (1905).

John Bathgate had arrived in Dunedin at the age of 54 as manager of the Bank of Otago was managing-director and, briefly, editor of the *Otago Daily Times*, became a member of parliament, and also had literary pretensions, publishing a book in Edinburgh called *NZ: Its Resources and People*.

BATS

Bats are the only native NZ land mammal. There are two distinct types:

- The long-tailed bat (*Chalinolobus tuberculatus*), which is similar to species in Australia and several Pacific islands and is believed to be a relatively recent immigrant. It has small ears, a wingspan of about 25 cm and a fur colour ranging from deep reddish-brown to black.
- The short-tailed bat (*Mystacina tuberculata*), which is unique to NZ and is believed to represent an ancient family extinct elsewhere but specialised here after a long period of isolation. It has long ears, a wingspan slightly longer than the average for the long-tailed bat, and a fur colour that varies from light grey, through brown, to black. Short-tailed bats on Stewart Island and the southern region of the South Island are larger and more robust than those further north.

The Maori name for both species is pekapeka.

```

Jane Gardner Batten (1909–82) known by her preferred name of ‘Jean’, became a world-famous aviatrix in her early twenties with solo flights from England to India (1933), England to Australia (May 1934), Australia to England, becoming the first woman to fly both ways (April 1935), England to Brazil (November 1935). In October 1936 she made the first direct solo flight from England to NZ in 11 days 45 min, establishing a solo record of five days, 21 hrs from England to Australia, and a solo Tasman Sea crossing of nine and a quarter hours. On her return to England in 1937 she established a new solo record of five days 18 hrs 15 min. International honours were showered on her.

Born in Rotorua in 1909, she was educated in Auckland and from the age of 18 single-mindedly approached the task of flying from England to Australia. Two early failures did not deter her. She was probably the most famous NZer of the 1930s. She lived most of her life abroad as a recluse and, unidentified immediately after her death, was at first buried in a pauper’s grave.

BATTLE OF BRITAIN

Battle of Britain, the crucial war in the air which was the first major reverse the Germans suffered in World War Two, involved a large number of NZ aircrew not only in the Royal Air Force fighter squadrons but in Bomber and Coastal Commands. It was the battle which kept Britain in the war and enabled the Allies to hold out and ultimately defeat Hitler's Third Reich.

When war was declared in September 1939, 550 NZers were in the RAF, including (to give them their later ranks) Air Chief Marshal Sir Keith Park, Air Marshal Sir Arthur Coningham, Air Vice Marshal C T MacLean and Air Vice Marshal F H M Maynard. In April 1940, No 75 (NZ) Squadron, RAF, was formed from a NZ flight using Wellington bombers, the first of which had been on order for the Royal NZ Air Force since 1937 and which had been about to be delivered to this country on the outbreak of war.

But even before the Battle of Britain, NZ airmen had been fighting in France and in fact the first Allied air ace of the war was Kiwi Flying Officer 'Cobber' Kain who had shot down 14 enemy aircraft by the time he died in an accident in June 1940.

The Battle of Britain began in July 1940 and among 'The Few' were 95 NZers, four of them commanding fighter squadrons. Their contribution was heroic but it is not generally known that of the 47 Kiwi airmen killed during the course of the battle, 32 belonged to either Bomber or Coastal Commands.

It was typical of NZ's contribution to World War Two that the main effort went into campaigns in North Africa and Europe rather than in the Pacific. During the remainder of the air war in Europe, the Kiwi involvement grew. As well as No 75 Squadron, among the units formed during 1941, 1942 and 1943 which were mostly manned by NZers were three fighter squadrons, two Coastal Command squadrons and a bomber squadron. And during 1944, NZ, Australian and English squadrons formed the Anzac Strike Wing to attack enemy shipping in the North Sea. Two NZers, Squadron leader Leonard Trent and Flying Officer Lloyd Trigg, were awarded the Victoria Cross during 1943 serving with RAF units.

But most of the RNZAF men were in Bomber Command units and they suffered the heaviest losses overall. Many of them served with No 75 Squadron, which moved from Wellington bombers to four-engined Stirlings and later the famous Lancasters. The unit was involved in bombing missions over Germany and in laying mines in enemy waters. Sergeant-Pilot James Ward won the Victoria Cross serving with the squadron, in 1941.

Nearly 11,000 NZers in total served during the war either directly with the RAF or as RNZAF men attached to RAF units. A total of 3,285 were killed, 138 seriously wounded and 568 captured — an extremely high ratio mainly because of the high percentage of aircrew in relation to ground staff among the serving Kiwis.

Two of the outstanding NZers among The Few in the Battle of Britain were Spitfire pilots Colin Gray, DSO, DFC and two bars, and Alan Deere, DSO and DFC and bar, who fought together as members of No 54 Squadron.

Gray was born at Christchurch in 1914, was educated at Napier Boys High School and began work with a stock and station agent. He had difficulty passing the medical for a short service commission in the RAF but was accepted in 1938 and was trained and ready when war broke

out. He distinguished himself with Fighter Command in action at Dunkirk and through the Battle of Britain and later in North Africa. Gray remained with the RAF until 1961 as a group captain, and among other overseas posts was in charge of air operations in the Far East Air Force during the Malayan emergency.

Deere was born at Auckland in 1917 — one of six brothers, five of whom fought in World War Two. (All survived although two became prisoners of war.) He worked on a sheep station and then as a law clerk in Wanganui before joining the RAF in 1937. He was permanently commissioned in the RAF in 1945, and as a group captain became deputy director of personnel at the Air Ministry in 1961 and was appointed aide-de-camp to the Queen. He was later on the staff at the Imperial Defence College.

BAUCKE, William

William Baucke (1848–1931) was born in the Chatham Islands, son of a Bavarian Lutheran missionary, became fluent in both Maori and what was known as Mori and, after four years at school in Wellington, taught himself French, German, Italian and Greek. When he came to the NZ mainland to live he gained employment as an interpreter in the King Country where he spent the rest of his life. He was a man of extraordinary intellect. His memoirs of the people known as the Mori were published by the Bishop Museum in Hawaii in 1928. Earlier, a collection of articles on Maori life which had appeared in the *NZ Herald* was published in book form as *Where the White Man Treads* (1905).

Blanche Edith Baughan (1870–1958) was a noted poet, journalist and penal reformer who spent most of her life in NZ. She was born in London, graduated from London University with a BA (Hons) in Greek in 1892, joined the English suffragette movement, engaged in welfare work in the East End and then visited many countries before arriving in NZ in 1900.

Over the following years she contributed to many journals in NZ, Australia and London. Her first two volumes of poetry were published in England — *Verses* (1898) and *Reuben and Other Poems* (1903).

Her long article, ‘The finest walk in the world’, about the Milford Track, was published in London in *The Spectator* and her speciality became descriptive articles about NZ scenery, mostly in tourist areas. These were usually published in journals and then republished in soft-covered booklets, and ultimately collected in hardback books. She published three books of verse in NZ — *Shingle-Short* (1908), *Brown Bread From a Colonial Oven* (1912) and *Poems From the Port Hills, Christchurch* (1923).

She was a strong and articulate campaigner for penal reform and wrote *People in Prison* which was published anonymously in 1936.

Frederic Ehrenfried Baume (1900–67) was born in Auckland and educated at Waitaki Boys' High School and in San Francisco (whence his mother came). He was senior music critic of the *Christchurch Sun* at the age of 21, editor of the *Timaru Herald* at 23, and worked in journalism in Sydney and London in the 1920s. He lived the remainder of his life in Sydney. He wrote five novels: *Half-caste* (1933), *Burnt Sugar* (1934), *Mercia Wade* (1947), *Devil Lord's Daughter* (1948) and *The Mortal Sin of Father Grossard* (1953). All his novels were published in Sydney except *Mercia Wade* which was published in London.

Baume was the son of **Frederick Ehrenfried Baume**, a prominent Auckland barrister and MP for Auckland City (1902–05) and Auckland East (1905–10), who had been born in Dunedin and educated at Otago Boys' High School and Otago and Auckland University Colleges and had spent some years in journalism before practising law.

James Keir Baxter (1926–72) is widely regarded as the most gifted poet NZ has produced. Vincent O’Sullivan has written of him: ‘He is capable of uncovering areas of response, and embodying them in poems of such formal rhetorical skill, that no other NZ poet can keep him company’. J W Weir, who edited the posthumous *Collected Poems* (1979), wrote: ‘When he died in Auckland on Sunday, 22 October 1972, at the age of 46, he bequeathed to his countrymen a body of poetry remarkable in its range and achievement’.

Baxter was born in Dunedin, a son of Archibald and Millicent Baxter. The father had been a conscientious objector during World War One and was brutally treated as a result. His mother was a daughter of Professor J Macmillan Brown, teacher of English and Classics at the University of Canterbury, and Helen Macmillan Brown (née Connon), and herself a BA from Sydney University. She later took a tripos in modern languages at Newnham College, Cambridge.

Baxter began to write verse at the age of seven, enjoyed a largely happy childhood, including two years in Britain from 1937. In 1944 he enrolled at the University of Otago but pulled out after a brief period, later writing: ‘My ambitions, then as now, were pudendal rather than academic’. His adolescence was stressful. For several years he worked on newspapers, then as a postman, a freezing-worker, continuing to take occasional courses at university in Christchurch and Wellington, ultimately graduating with a BA. He was an alcoholic, but joined Alcoholics Anonymous in the 1950s. In 1958 he travelled to India and Japan on a Unesco grant, and also that year joined the Catholic Church.

His most productive period as a writer was between 1960 and 1968. He held the Robert Burns Fellowship at the University of Otago in 1966 and 1967. The following year he decided he would devote his time to social work among the alcoholics and drug addicts of Auckland and Wellington, and in 1969 established a commune at Jerusalem on the Whanganui River. The small, sandalled and bearded figure of Baxter became a controversial symbol of leadership for the hopeless and the outsiders of NZ society, both Maori (who lovingly called him ‘Hemi’) and Pakeha, and he was a scorching critic of the country, its mores and materialistic values. But he will be remembered for the profundity and beauty of his verse and criticism beyond anything else.

Bay of Islands is a region surrounding a harbour on the eastern side of the North Auckland peninsula. The bay contains about 150 islands, is geologically a drowned-river system, and once (until just before the arrival of the first Maori immigrants) was a scene of volcanic activity.

It is the long-time home of the powerful Ngapuhi tribe which has been headed by such historically notable chiefs as Hongi Hika, Ruatara and the two Pomares.

The first European arrivals were the party led by James Cook, in 1769. Cook gave the region its name. The second arrivals were the French with Marion du Fresne in 1772. Du Fresne was killed there during a dispute with the Ngapuhi. The first whalers arrived in the Bay of Islands in the last decade of the 18th century, the first missionaries in 1814, and by the 1840s the Bay of Islands harboured the most populous European settlements in NZ — at Kororareka (later Russell), Otuihu, Paihia, Waimate North and Kerikeri.

Because it was the original European settlement, it is associated with a long string of national ‘firsts’ — the first Christian sermon, preached by Samuel Marsden at Rangihoua on Christmas Day 1814; first wheat crop planted, at Rangihoua, in 1812; first European born in NZ, at Otuihu in 1815; first printing press, installed at Paihia in 1835; first flour mill, at Waimate North in 1835; first brewery at Kororareka in 1835; the post office and hotel licence, both at Kororareka, in 1840 — to name a few.

The first symbol of British administration arrived with the newly appointed British Resident, James Busby, who took up residence in 1833 at Waitangi, the site seven years later of the signing of the treaty between Maori chiefs and the new Governor, William Hobson.

As a seaport for whalers, sealers and adventurers, Kororareka became a wild and lawless settlement. When he became governor in 1840, Hobson decided the reputation of Kororareka was unsuitable for a national capital so he bought land a few miles to the south, at Okiato, and named it Russell after the then British Secretary of State for the Colonies, Lord John Russell. When Hobson moved the capital to the present site of Auckland City in 1841, the name Russell came to be associated with Kororareka. The settlement was sacked in the Northern War (or Heke's war).

With the new capital thriving at Auckland, Bay of Islands settlers who had fled there, did not return north and, for years, Russell remained deserted. Recovery was gradual, later in the 19th century, and today the town is a popular tourist and holiday resort.

```

Bay of Plenty is the broad curve of coastline between the base of Coromandel in the north and Cape Runaway to the south-east, and the name refers also to the region east of the Kaimai and Mamaku Ranges and including the central plateau area. Within the region are the lower Thames-Coromandel area and Ohinemuri, Matamata, Taupo, Waikohu, Wairoa and Waiapu.

The main towns and cities are Rotorua, Tauranga and its port of Mt Maunganui, Te Puke, Kawerau and Whakatane. It was named by Captain Cook as he sailed up the coast during October and November 1769, noticing abundant food at numerous Maori villages on the coast, which enabled him to replenish his own supplies — all in contrast to the kind of observations he had made earlier off Poverty Bay.

Today the region remains one of the richest and most plentiful in NZ, supporting tourism (centred on Rotorua), dairying and sheep raising, a forestry industry based on huge plantation pine forests, and a horticultural industry centring on kiwifruit orchards near Te Puke, the self-styled 'Kiwifruit Capital of the World'.

BEAGLEHOLE, John Cawte

John Cawte Beaglehole (1901–71) was a writer and historian with an international reputation as a specialist on the life of Captain James Cook and on the history of Pacific exploration. He was born in Wellington, educated at Wellington College, Victoria University College and the University of London. He won awards for writing and for history in NZ and from universities in Britain and Australia. Beaglehole published a large number of authoritative works, including *Exploration of the Pacific* (1934, and reissued three times since, most recently in 1975), *The Discovery of NZ* (1939, and reissued since), *NZ and the Statute of Westminster* (1944), *The Journals of Captain James Cook* (in four volumes between 1955 and 1967), *Voyage of the Resolution and Discovery* (1967), and *The Endeavour Journal of Joseph Banks* (1962).

Beaglehole still holds a commanding position among historians of the South Pacific. Of the Cook and Banks journals, as edited by Beaglehole, the critic E H McCormick wrote: '[He]... displayed to the full his superb gifts as historian and editor; the scrupulous fidelity to fact and text; the erudition he drew, always with acknowledgement, from numerous experts and disciplines; the wide-ranging imagination and the ever-present compassion; the humour that sometimes seeped from the narrative to enliven his footnotes; and the masterly architectural skill with which he drew the whole work together, shaping it like a symmetrical eighteenth-century mansion.'

BEATTIE, James Herries

James Herries Beattie (1881–1972) was born in Gore and educated at Southland Boys' High School. He worked as a book-keeper for the first 18 years of his working life, then became a newspaper reporter for three years, the librarian at the New Plymouth Public Library for two years, and from 1922 until his retirement in 1939 was a bookseller in Waimate. Beattie completed an ethnological survey of the South Island in 1920, republished in 1993, and indulged in a lifelong interest in NZ history, writing hundreds of newspaper articles and 25 books, most of them based on information he had acquired directly from elderly Maori and early settlers.

BEATTIE, Sir David Stuart

Sir David Stuart Beattie (1924–), the 14th Governor-General of NZ, was born in Sydney, educated at Dilworth School, Auckland, and Auckland University College where he gained an LLB. He represented NZ Services at rugby in 1944 and 1945, was president of the Auckland Law Society in 1964 and a Supreme Court Judge for 11 years to 1980. He was Governor-General from 1980 to 1985.

BEAUCHAMP, Sir Harold

```
{ewc

b0580pbs.dib
}
```

Sir Harold Beauchamp (1858–1939) is remembered mainly for being the father of Katherine Mansfield, one of the most distinguished writers NZ has produced. He was born at Ararat, Victoria, at the time of the gold rush there, the son of a cheerful, nomadic man who later brought his family to NZ. Beauchamp was highly successful as a businessman in Wellington and became sought after as a company director. For 38 years he was a director of the Bank of NZ, and for a lengthy period chairman.

For many years he and his famous (but, in his eyes, aberrant) daughter were alienated, but not long before her death they were reconciled.

BEECH TREES

```
{ewc
MVIMG,
MVIMAGE,
[HOTMACR
O=MVJump(
"B0590PG",
TOPIC")] !
b0590pas.dib
}
```

Beech trees have been in NZ for about 135 million years according to J T Salmon in his authoritative *The Native Trees of NZ*. They belong to a family that includes the oak and chestnut and is represented all over the world outside the tropics. The beeches dominated huge areas of forest throughout the South Island and the lower part of the North Island in pre-European times.

The five beeches in NZ are the silver beech (*Nothofagus menziesii*), hard beech (*N. truncata*), red beech (*N. fusca*), black beech (*N. solandri*) and mountain beech (*N. solandri* var. *cliffortioides*).

The hard beech grows as far north as Kaitaia and as far south as Greymouth. The other four grow through the full length of the South Island, and the mountain beech as far north as the central North Island plateau, the black beech as far up as the southern Waikato, the red beech up to the north of the Waikato and the silver beech to the Coromandel Range. The Maori for silver beech is tawhai, red and hard both tawhairaunui, and black and mountain tawhairauriki.

Frank Newhook in *Our Trees* describes the NZ beeches as follows: ‘Trees to 25–30 m, foliage in characteristically horizontal layers. Flowers on all beeches are monoecious — unisexual flowers on the same plant; male flowers are virtually a cluster of red stamens; female “cupules” 5–10 mm, ripening to a hard nut. Every now and then there is a prolific flowering or “mast” year. Red, hard and black beech flower September/December; silver and mountain beech November/January.’

}
```

Beer has been the favourite alcoholic drink of NZers over most of the period since European settlement. The first brew was put down by James Cook and the crew of the *Resolution*, in Dusky Sound in March 1773, mainly for use as a preventive against scurvy. They mixed unfermented beer they had brought with them for wort, with mollasses and rimu and perhaps ti-tri leaves and bark.

An observer in the early 1900s was able to say that in NZ whisky was the most general alcoholic drink. Wine was rare and seldom drunk. But the *NZ Herald*, in an editorial criticising a new beer tax in 1878, said: 'Beer is the national beverage of NZ. Excepting in the case of teetotallers, beer is used by all classes. But more especially beer is the beverage of the working man. The labourer working in the open air will at noon eat his dry dinner of bread and meat brought with him; and feel he has dined well if he can wash the food down with a pint of good colonial beer... Now this taxing beer is taxing the working-class because it is more especially their beverage than that of any other class, although nearly all use it more or less.'

In the rough days of Kororareka in the Bay of Islands 'grog shops' were a scandal and the first temperance meeting was held in the early days of European settlement there. They mainly sold rum and other roughly distilled spirit, and it was this that prompted Joel Samuel Polack to set up NZ's first brewery beside his store on the beach at Kororareka in 1835. Polack hoped his beer would attract the locals away from the 'deleterious spirits' being consumed at the time. Nelson claims the second brewery was opened there in 1842 by Hooper and Company whose principals were Thomas Renwick, a physician, and George Hooper, a local businessman. Next was probably Aucklander John Logan Campbell in Auckland in late 1842 or 1843.

Until World War One, most provincial centres had their own breweries, in the cities often more than one. But in 1923, ten of the major companies were brought into the group which became NZ Breweries, then Lion Breweries and now the Lion Corporation. The other major brewing company, Dominion Breweries Ltd, was started in Auckland in 1930 and also absorbed a number of smaller operations. It is now a large corporation, second only to Lion in market share.

In the 1990s, about 40 'boutique' breweries increased the range of beers available. The McCashin Malt and Brew House in Nelson set the trend when it was issued with the first brewing licence allowed in NZ since 1930.

But while beer consumption in NZ continued to rise after World War Two it peaked in 1975 at 132 litres per head and then began a steady decline, a trend which has generally continued. By

the mid- 1990s consumption was down ten per cent on the 1975 figure. Spirits consumption has remained fairly steady but there is no doubt that beer has suffered in competition with wine. A changing lifestyle of NZers who now more frequently eat out at restaurants and a vastly improved wine quality have resulted in consumption increasing by around 30 per cent since 1975.

At the same time there has been a marked change in the pattern of beer consumption — away from draught, or tap, beer consumed in hotel bars in favour of canned lagers drunk in homes or outdoors in summer. As the population has become more health conscious and more concerned at the dangers of driving after drinking too much, there has been a growth in the production of beers with a reduced alcoholic content. Few NZ beers have been stronger than 5 per cent alcohol (by volume) and are generally between 2.5 per cent and 5 per cent.

The words beer and ale are now generally regarded as synonymous, with lager as a general description for a lighter (in colour) and more effervescent drink.

BEES

```
{ewc

b0620pas.dib
}
```

Bees belonging to NZ's 40 native species are all small, dull in colour and solitary in their living habits, nesting in burrows in sandy and friable soil, and most often seen in summer feeding and gathering pollen on a variety of native and introduced flowers.

The first hive bees were imported in 1839 from England to Hokianga, with other introductions in 1840 and 1842, and more during the next 20 years from Australia and the US. Traditionally the bees which have adapted best to NZ honey-making methods are Italian strains, with German strains and hybrids of Italian and German strains still common.

Honey is widely valued as a food in NZ but even outweighing this value is the pollination of pasture plants for the pastoral industry. Thus, white clover is the most important source of honey.

Bumble bees were first imported in 1873, but these did not become established; the first successful importation was in 1885. Bumble bees have special importance in the South Island because, although they do not produce honey, they pollinate lucerne and red clover, a function not fulfilled by native or honey bees.

BELL, Sir Francis Dillon

Sir Francis Dillon Bell (1821–98) was the son of an English merchant who lived in Bordeaux, France, where Bell was educated before joining his relative, Edward Gibbon Wakefield, in the service of the NZ Company in London. He arrived in NZ in 1843 and acted as a land buyer for the NZ Company in Auckland, the Wairarapa, Nelson and New Plymouth and was for a while a magistrate in Nelson. He became fluent in Maori and one of the most knowledgeable in the colony on the complicated and emotional subject of land purchase from Maori. He was Minister in Charge of the Treasury, Customs and Native Affairs in the Domett ministry from 1862 and moved to Dunedin to enter business the following year when the government fell. He became deeply involved in city and provincial politics in Otago and entered national politics again in 1871. He visited London in 1869–70 to help raise a loan of £2 million for Vogel's public works programme, became Speaker of the General Assembly from 1871 until 1875, a member of the Legislative Council in 1877. In December 1880 he was appointed to succeed Vogel as agent-general for the colony in London. He revisited NZ in 1891 for six months, and then returned to live in 1896.

Bell was a polished, urbane politician and diplomat. His son, Sir Francis Henry Dillon Bell, became Prime Minister of NZ for a fortnight in 1925.

BELL, Sir Francis Henry Dillon

```

Sir Francis Henry Dillon Bell (1851–1936), was the first NZ-born Prime Minister. He was the eldest son of Sir Francis Dillon Bell, was born in Nelson, educated at Auckland Grammar School, Otago Boys' High School and Cambridge before qualifying as a lawyer and practising in Wellington. He was an outstanding lawyer. He was mayor of Wellington in 1891, 1892 and 1897, served two terms on the Wellington Harbour Board during the same decade, and was a member of parliament from 1893–96. When the Reform Party came to power in 1912, Bell was called to the Legislative Council and between then and 1926 held various portfolios — Internal Affairs, Immigration, Health, Education, Marine, Justice, External Affairs — and the post of Attorney-General from 1919–26. He was virtually the country's leader from the time William Massey took ill in 1924 until his death in May 1925 and was then Prime Minister officially until a replacement could be decided upon, Bell having declined to retain leadership.

Bell represented NZ at the assembly of the League of Nations in 1922, and in 1926 accompanied his successor as prime minister, J G Coates, to an Imperial Conference in London and to a League of Nations assembly in Geneva. At the request of the British Foreign Office and Colonial Office, he went to the Geneva conference on the International Court of Justice at the Hague, at which he was elected vice-president and a member of the drafting committee.

He was a strong supporter of the League of Nations, believing it could be instrumental in bringing peace. He had lost a son aged 33 — William Henry Dillon Bell (1884–1917), a Wellington lawyer and MP from 1911 to 1914 for Wellington Suburbs — in France in 1917.

Bell Block is a suburb of New Plymouth with nearly 10,000 people, 7 km to the north-east of the city, named after Mr (later Sir) Francis Dillon Bell who negotiated the sale for the NZ Company of the 607-ha block in 1848 from Rawiri Waiaua and other Taranaki chiefs despite the staunch opposition of the Ngati Awa chief Katatore. No attempt was made by European immigrants to settle the block until 1853 and the following year Waiaua and some followers were killed by Katatore as they were marking out the boundary. Katatore had previously erected what became known as the FitzRoy Pole, marking the boundary he wanted imposed to hold back European settlement.

```

Bellbird (*Anthornis melanura*) is also known, but less commonly, as korimako, makomako or mockie. It is noted for its song which often sounds remarkably bell-like, particularly at a distance.

The bellbird is a vigorous and lively bird with slender proportions, an arched bill and a shallow forked tail. It is found mainly in forests throughout NZ except around and north of Auckland, although there appear to be colonies at Whangarei Heads and Warkworth. Until 1860 the bellbird flourished but it declined, possibly owing to disease, until about 1910, when numbers began to recover. It eats insects, fruit and nectar.

The Three Kings bellbird (*A. m. obscura*) is a little larger than the mainland species. The Chatham Island bellbird (*A. m. melanocephala*) became extinct in 1906.

BELLINGSHAUSEN, Fabian Gottlieb von

Fabian Gottlieb von Bellingshausen (1788–1852), also known as Faddey Faddeyevich von Bellingshausen, was a Baltic German navigator who led a Russian expedition to the Antarctic from 1819 to 1821 and was almost certainly the first man to sight the Antarctic continent (in 1819).

He visited NZ in 1820, calling into Queen Charlotte Sound. He and the crew of his two ships, the *Vostok* and the *Mirnyy*, met Maori still little affected by the arrival of Europeans. They took back a number of items of Maori clothing and many artifacts which are still held in Russian collections.

The Maori the Russians met were within a few years virtually wiped out by tribal conflicts, so the Russian account of their experiences in the sound are a valuable record. A book on the visit, *Bellingshausen, A Visit to NZ: 1820* by Canadian Glynn V Barratt, was published in NZ by the Dunmore Press 1979.

The Bellingshausen family were among Germans who had long ago settled on the island of Oesel, off the coast of the Russian Baltic province of Estonia and had served the Russian Crown in various capacities. Fabian joined the Russian Navy as a cadet.

In the early 19th century, the Russians were well known in the north Pacific and were enthusiastic to follow in the footsteps of navigators like James Cook in the southern ocean. Von Bellingshausen was a member of an earlier Russian expedition in the Pacific and in 1804 spent 11 days in the Marquesas, his first contact with Polynesian people.

In 1819, his route was to South Georgia, the South Sandwich Group, down along what is now called Princess Martha Land, across to New South Wales, the Tuamotu Archipelago, and after a severe Tasman Sea storm the two vessels laid up for a week in Queen Charlotte Sound, having followed COOK'S charts to get to where Cook himself had been a visitor.

BENJAMIN, ETHEL

Ethel Benjamin (1875–1958) became the first woman in the British Empire to acquire a law degree when she graduated from Otago University in 1897. That same year, Parliament passed an act enabling women to practise law. The second woman to qualify was the outstanding Ellen Melville, who qualified in Auckland in 1906.

Benjamin was consistently denied attendance at the annual dinner of the Law Society; she was allocated a private room in the society's library, and prescribed a regulation dress. She specialised in cases which strongly affected women, such as divorce proceedings. She also wrote and published papers on women and workers, and women and the study and practice of law.

Although women did not enter the law in great numbers for many decades, a big surge developed in the 1970s and by 1983 42 per cent of all students in law were women. In the 1990s the ratio of women settled to about half.

Benmore is the name of the largest man-made lake in NZ (79 km²), a mountain nearby (1,863 m) and a hydro-electric power station whose dam created the lake. The locality is said to have been first named Benmore in the 1850s by pioneer settler Alexander McMurdo after his birthplace in Scotland. Benmore is also the name of a locality in Southland, 51 km north of Invercargill on the road to Lumsden.

The Benmore power station dam is 110 m high from its base to the crest which measures 610 m across from the abutments at each side. Its 540 MW makes it the second largest hydro generating station in the country (after Manapouri). It came into full supply in 1966. A converter station near the power-house changes Benmore current from AC into DC, feeds it into an inter-island cable, and it is changed back to AC for the North Island grid system.

Lake Benmore is at the back of the dam and a smaller artificial lake, called Lake Laird, lies at its foot.

BENNETT, Dr Agnes

Dr Agnes Bennett (1872–1960), one of the most remarkable women of her time, spent much of her professional life in the cause of reducing infant, neo-natal and maternal deaths. Unable to find work in Sydney despite her BSc(Hons), she studied at Edinburgh's Medical College for Women and in 1905 she took over a practice in Wellington, where she was soon the first woman to own and drive a car (she was still driving at 86).

In 1908, Dr Bennett was appointed Medical Superintendent of St Helen's, Wellington, the first state maternity hospital in the world, working closely with Grace Neill, later with Hester MacLean and Mother Mary Aubert. In 1910, she became an honorary physician to Wellington Public Hospital children's ward — the first woman doctor in NZ to join a public hospital's staff.

In 1915, since the NZ army offered no work for women, she became the first woman commissioned officer in the British Army, serving mainly in the Scottish Women's Hospital units in the Balkans, where she performed operations close to the front lines and under fire. An early advocate of birth control clinics and sex education, she strongly defended the education of women and was first president of Wellington's Federation of University Women.

She retired from St Helen's in 1936, learnt to fly and spent a year in the Australian flying doctor service. In World War Two, after founding the Women's Auxiliary here, she did war work in England, serving as ship's medical officer both going there and returning. At the age of 75 she flew to the Chatham Islands to act as relieving doctor.

BENNETT, Sir Charles Moihi Te Arawaka

Sir Charles Moihi Te Arawaka Bennett (1912–) was born at Rotorua, a son of Bishop Frederick Bennett, and became an outstanding scholar and soldier.

He was educated at Te Aute College, Canterbury and Otago university colleges and at Oxford. During World War Two he rose from the ranks to be Lieutenant-Colonel in command of the Maori Battalion. He won the DSO and was seriously wounded in 1943. Bennett was High Commissioner for NZ in Malaysia from 1959–63 and was knighted by the Malaysian government. For six years after his return, he was assistant secretary for Maori Affairs. He served as a director of the Bank of NZ and he was president of the NZ Labour Party.

Frederick Augustus Bennett (1871–1950), a grandson of Dr John Boyle Bennett, was educated at St Stephen's south of Auckland and later, under the patronage of Anglican Bishop Suter, at Nelson College and Bishopdale Theological College. He was ordained a priest in 1897 and worked among Maori in Nelson, Taranaki, Bay of Plenty and Hawke's Bay. In 1928 he was consecrated the first Bishop of Aotearoa, at St John's Cathedral, Napier. He was associated as a young man with Sir Apirana Ngata and Sir Maui Pomare. He was a most able organiser and administrator.

Bennett is as well known for his family as he was for himself. He married twice — to Hannah Te Unuhi Mary, who died in 1909; and to Rangioe Ariki. Seven of his 14 sons served in the armed forces during World War Two, and one of them, Colonel Sir Charles Moihi Te Arawaka Bennett, commanded the Maori Battalion for a period, and later became NZ's first High Commissioner to the Federation of Malaya. Another son, Para Bennett, was the first Maori to obtain a commission in the Royal Navy.

BENNETT, John Boyle

John Boyle Bennett (1808–80) was born in County Cork, Ireland, graduated as a doctor of medicine, then became editor of a religious paper in London, *The Watchman*. He emigrated to NZ in 1849 to edit *The NZer* in Auckland and later became Registrar-General for the colony.

Kimble Bent (1837–1916) was an American-born soldier who deserted from Her Majesty's 57th Foot Regiment to fight with the Maori during the last few years of the land wars. He has been immortalised by journalist/author James Cowan in *The Adventures of Kimble Bent*, and by Maurice Shadbolt in the novel *Monday's Warriors*. He was the son of an American shipbuilder in Maine and a half-caste Native American mother, ran away to sea in the US Navy and went to England when he was deserted by his wife.

Bent joined the 57th Regiment and almost immediately deserted. He was court-martialled and punished and then sent to India where he served for two years before coming to NZ with the regiment in 1861. After being flogged and then jailed in Wellington for an offence against discipline, Bent deserted to Titokowaru's force and for the next 13 years lived behind the Maori lines as a slave (mainly as a cartridge-maker) or, after the land wars, as a bush exile up the Waitara River. He came out of exile in 1878 and lived in Blenheim, where he died.

James Berry (1906–79) was born in London, emigrated to NZ in 1925 and became the best-known designer of postage stamps, coins and medals in the South Pacific region. He worked for some years in advertising agencies and magazines before becoming a freelance designer. He designed more than 200 stamps for NZ, the Cook Islands, Niue, Western Samoa, Tonga and Bermuda; and coins, medals and badges for the NZ, Western Samoan, Cook Islands and Fijian governments, for the Franklin Mint (US), the Royal Society of NZ, the National Commemorative Society of America, the Royal Numismatic Societies of both NZ and Australia and for many other organisations.

```

Elsdon Best (1856–1931) was born at Tawa Flat, near Wellington (where his father had a farm), passed the junior Civil Service Examination and, after a year working in an office, went mustering and bush-felling on the East Coast, serving with the Armed Constabulary for a time at Parihaka during the Te Whiti unrest. He spent three years in Hawaii, California and Texas, mainly working with cattle, and on his return to NZ began to take an interest in journalism and the traditional way of life of the Polynesians.

From 1895 he worked in the Urewera Country for 16 years as a road foreman, interpreter and health and sanitary inspector, diligently observing, listening, discussing and noting the traditional lifestyle and history of the Tuhoe people, whose tribal life was at the time more intact than that of any other major Maori group in the country.

He had a number of articles and monographs published during his stay in the Ureweras, but from the time of his appointment as ethnologist at the Dominion Museum in 1910, he began compiling the bulk of his 25 books, pamphlets and 50 papers on Maori history and lore. The best-known books are *The Maori as He Was* and *The Maori* (both published in 1924), and *Tuhoe, the Children of the Mist* (1925). His contribution to our detailed knowledge of Maori history and traditions is unsurpassed.

BETHELL, Mary Ursula

Mary Ursula Bethell (1874–1945) was a poet who published her first collection, *From a Garden in the Antipodes*, at the age of 55 under the pen-name Evelyn Hayes. Two later collections, *Time and Place* (1936) and *Day and Night* (1939), were published anonymously. Her reputation was small until after World War Two but has been growing without hindrance since.

In his *NZ Literature* (1959), E H McCormick referred to *From a Garden in the Antipodes* as follows: ‘Intimate, earthy, urbane, the poems celebrated the quiet round of horticultural enterprise and domestic incident in the writer’s home on the Cashmere Hills, Christchurch. Some made their impact with the stylised precision of a Chinese ideograph, others achieved their effect of sophisticated humour by presenting a mundane subject in sonorous rhythms and elaborate phraseology.’ Vincent O’Sullivan, in 1970, called her one of the first two NZ poets (RAK Mason was the other) ‘who almost consistently wrote well’.

She was little known when she was alive but those who were her acquaintances say she was a devoutly religious woman of charm, intelligence and wit.

Bidi-bidi (*Acaena novae-zelandiae*) is the commonest of about 15 species of a group of prostrate herbs, members of the rose family, which occur in NZ. The fruit of *A. novae-zelandiae*, and some of the others of the genus, carry little hooks and attach themselves to clothing and to animal skins (diminishing the value of the hides). The local name is a corruption of the Maori name, piripiri.

BIDWILL, Charles Robert

Charles Robert Bidwill (1820–84) was the first man to move a flock of sheep on to the natural pasture in the Wairarapa and thus — with a small group of others who were not far behind him — virtually founded sheep farming in this country.

Bidwill, born in England, followed his elder brother, John Carne Bidwill, to Sydney in 1841, and two years later set out for NZ with 1,600 sheep. He sold some of them at Nelson, took some on to Port Nicholson and, after returning from an expedition into the Wairarapa to investigate its potential for sheep farming, drove a flock of 350 round the Mukamuka Rocks into the southern Wairarapa valley. He was followed soon after by the men with whom he had surveyed the valley: Clifford, Vavasour, Weld, Petre and Swainson.

BIDWILL, John Carne

John Carne Bidwill (1815–53) was born in England and in 1838 sailed for Sydney, accompanied by his sister, Elizabeth, to do business for his father, an English merchant. Although he settled in New South Wales, he made several visits to NZ, in 1839, 1840 and 1848, during which he explored several areas. He was a knowledgeable amateur botanist. He became the first European to climb Mt Ngauruhoe and made the first collection of NZ alpine plants, sending them to Kew. His *Rambles in NZ* was published in 1841. On his last visit, in 1848, he collected plants round the Nelson area. The pine, *Dacrydium bidwillii*, is named after him.

BILLFISHES

Billfishes, or marlins, are large, ocean-roving pelagic fish common off the north-eastern coast of NZ in the summer months. They are much prized as game fish.

- The striped marlin (*Tetrapturus audax*) grows to 3.5 m in length and up to 190 kg in weight, is slender, with an upper jaw protruding to make a bill which is 17 per cent of the total length of the fish and which it uses in the same way as a swordfish to stun its prey. It is a metallic blue-green on the back with a silver belly, dark blue fins and narrow lavender stripes running vertically round the body.
- The blue marlin (*Makaira nigricans*) is the longest of the marlins, often exceeding 4 m in length, but, at around 700 kg, it is not as heavy as the black marlin. It has a shorter bill than the striped marlin, but not as short and heavy as the black marlin, has a bright metallic blue back, silver flanks and belly and pale vertical stripes along its body. It is prized as a game fish for its fighting quality and flesh but is not as common in NZ waters as striped marlin.
- The black marlin (*M. indica*) tends to be shorter and heavier (up to 1,000 kg) than the blue marlin, has a blue-black back and silver-grey belly and very pale vertical stripes along its body which almost immediately disappear when the fish is caught. Like the other marlins, it is a fast-swimming predator that feeds on other fish after stunning them with its bill. It is a hard-fighting game fish that does not visit NZ in large numbers but does arrive in summer months in northern waters. It is a good eating fish.

BILLIARDS AND SNOOKER

```

"TOPIC")] !
b0820pas.dib
}
```

Billiards and snooker were introduced to NZ at the end of the 1880s, and gathered widespread popularity until the 1960s. Many country homes in remote areas in NZ had their billiards room but, because of the expense of buying tables, most players went to public billiard parlours which proliferated in NZ cities and even small towns. People's social attitudes to billiards became ambivalent: it is a perfectly respectable pastime for the landed gentry, but the commercial billiard parlours were regarded as dens of iniquity with a minimum age limit and with women prohibited from attending.

NZ amateur billiards championships were first held in 1908, but the NZ Billiards Association was not formed until about 1927. The emergence of snooker as a competitive sport with national championships came immediately after World War Two. Snooker is now the game which attracts the most attention internationally, with highly paid professionals taking part in peak viewing television contests.

In recent years the game of pool, from America, has gained a large following in NZ, and is played on small tables in hotels and taverns.

NZ's most famous billiards and snooker player was Clark McConachy, who first played in the world championships in 1922, and won the international title in 1951. He was a top world professional billiards and snooker player for more than 50 years from the time of World War One. The most famous contemporary snooker player is Dene O'Kane, who plays as a professional in Britain.

BILLING, Graham John

Graham John Billing (1936–) is a novelist of limited output but enormous ability whose work has won him a number of literary awards in NZ and has been taken seriously by critics internationally.

Billing was born in Dunedin, educated at Otago Boys' High School and Otago University and was for some years a successful newspaper and television journalist. After attachment to the Antarctic division of the Department of Scientific and Industrial Research at Scott Base in 1962, he wrote his first novel *Forbush and the Penguins*, published in 1966. *The Alpha Trip* followed in 1969, and then *Statues* (1971), *The Slipway* (1974), *The Primal Therapy of Tom Purslane* (1980) and *The Chambered Nautilus* (1993).

He won the Scholarship in Letters in 1970, and the Robert Burns Fellowship at Otago University in 1973. For some years in the middle of the 1970s, he worked as a teacher in Australia.

BINNEY, Donald Hall

Donald Hall Binney (1940–), one of NZ's best-known contemporary artists, was born in Auckland, attended the Auckland University School of Fine Arts from 1958–61 and held his first one-man exhibition in 1963. His personal style of painting was immediately noticed and he has remained in the forefront of NZ painting since. He was president of the NZ Society of Sculptors and Painters from 1974–76 and is an amateur ornithologist; but he is innovative and his interests have expanded in recent years. He continues to paint and exhibit and teaches at Elam School of Fine Art in Auckland.

New Arrivals

Birds and the Maori

Arrival of Europeans

Introduced Birds

Migratory Birds

Endangered Birds

Birds in NZ are represented by about 248 species either breeding or known to have bred since the arrival of Europeans, a relatively small number. Of these, 34 have been introduced by people and about 40 regular or occasional visitors have been recorded. Ornithologists in Britain could anticipate sighting about 500 different species and Australian bird-watchers would have more than 700 possibles on their list, of which only 20 were introduced.

NZ's long separation from any other land mass has left strange relics of bygone ages — evolutionary oddities like the tuatara, the kiwi, the kakapo and the weka — and this isolation also accounts for a number of unique biological features of interest to the ornithologist. Many of the sea birds and the migratory waders are common to many regions of the world but the major effect of NZ's isolation is the relatively small number of land birds. For example while there are eight owls and ten kingfishers in Australia, NZ can lay claim to only two owls (one introduced) and one kingfisher (and an occasional kookaburra, also introduced).

The primitive birds — the flightless moas and their relatives, the kiwis — probably arrived here by land before the drifting of the continents broke up the great land mass of Gondwanaland and these islands drifted away and were cut off from the rest of the world about 80 million years ago. These ancient creatures survived for so long because of the absence of predators until people arrived on the scene, a flickering moment ago in historical terms. Three species of kiwi are extant, protected and possibly rescued just in time.

The demise of the moa occurred probably less than 500 years ago after being hunted to extinction by the early migrants from Polynesia. Moas, which came in all sizes over an estimated 25 species, were plentiful and not difficult to hunt down. So for several centuries, the moa-hunters (as these earliest inhabitants of NZ have come to be called) depended on them economically.

Other unique flightless birds in the NZ fauna, the weka and takahe, for example, probably lost the power of flight after they arrived here. With food plentiful on the forest floor and no

major predators to threaten them, they found flying unnecessary.

A number of flying birds endemic to NZ belong to families which have no close relatives anywhere else in the world — which suggests that although they probably flew here they arrived in very early times and, isolated from the rest of the world, adapted and evolved to become unique genera.

The huiia (belonging to the endemic family Callaeidae and now extinct) and the kakapo (Psittacidae, the parrot family) became reluctant to fly, choosing rather to climb upwards in the trees in a series of hops and then jump downwards. Piopio (the NZ thrush, family Turnagridae) rarely flew any distance but made short rapid bursts from tree to tree.

The NZ wrens (family Acanthisittidae, which has no connection with the large family of Troglodytidae found in many other parts of the world) also preferred to clamber among the foliage and today their wings are small and rounded and their feet relatively large and strong.

There are a number of immigrants now established as NZ birds which, caught up in the prevailing westerly winds, probably made involuntary flights across the Tasman in sufficient numbers to be able to breed successfully here. Probably within the last 10,000 years (but certainly before the arrival of man) the harrier, morepork, kingfisher, pipit, fantail, tomtit, robin, grey warbler and some of the rails became established here.

BIRDS - New Arrivals

Birds continue to arrive from across the sea. There are regular migrants, and sometimes windblown vagrants arrive here by mistake. They are mostly only temporary visitors but among those who have taken up permanent residence quite recently are the white-faced heron, the silveryeye, welcome swallow, cattle egret, Australian coot, spurwinged plover and black-fronted dotterel. With the exception of the silveryeye, first reported in 1856, they have all become accepted as NZers this century.

The long coastline and large range of climates and habitats in the NZ faunal area, which includes the outlying islands, provide for the needs of a large number of sea birds. Of a total species on the NZ Checklist, there are 75 albatrosses and petrels, 18 gulls and terns, 14 penguins, 14 shags (Britain has only two) and a large number of wading birds, such as the local oystercatchers and the migratory godwits. Many of these may have had their origins in Australia, particularly the coastal birds and the gannets which regularly cross the Tasman. The penguins and petrels must have come from Antarctica.

BIRDS - Birds and the Maori

}
```

Birds loomed large in the life of the Maori in pre-European times. They were regarded as descendants of Tane, the God of the Forest, and appear frequently in myths, legends and proverbs. In the absence of large animals they were more noticeable than they would be among the fauna of another country and played an important part in everyday life. They provided food and also plumes for decoration and clothing. And because they were valuable, Maori observed them well and were knowledgeable about their habits.

This intimate knowledge was the basis of the characteristics and significance given to the bird figures of legend and proverb. The pigeons which gorged themselves on berries until they were almost too heavy to fly were proverbial symbols of greed. A too talkative chatterer was likened to the kaka because of that parrot's raucous cries, but a skilled orator was compared to a tui whose voice charms all who listen.

The Maori names were often descriptive of the song or cry of the bird — riroriro (grey warbler), kaka, kea, titi (muttonbird); or its behaviour — piwakawaka which conjures up the restless flitting of the fantail.

The native pigeon, kereru, large and not difficult to catch, was important for food. The pukeko, which the Maori brought with them on the ancestral canoes, and the kaka, kakapo, kiwi and weka were all eaten. The inquisitive weka was fairly easy to snare and the flightless kakapo and kiwi were hunted with dogs. Tui were eaten but were also kept as cage birds and taught to talk.

Muttonbirds (the sooty shearwater and related species) were, and still are, a particular delicacy. Birds for food were carefully stored by being preserved in their own fat in gourds or special containers made from kelp and flax.

A number of birds were greatly prized for their feathers, in particular the huia, stitchbird and heron. A feather cloak was a very valuable possession, and huia tail feathers and the plumes of the white heron were worn only by those of high rank and kept in often richly carved special boxes (waka huia).

BIRDS - Arrival of Europeans

The arrival of the Europeans brought about sudden changes which had a marked effect on bird life. The settlers found a land which was heavily forested and they regarded the bush as their enemy to be destroyed as quickly as possible to clear land for the cultivation of food or for grazing.

Birds like the huia, the saddleback and the kokako soon lost much of their habitat and the smaller birds, like the bush wren, also suffered. While the tui, fantail, silvereye and grey warbler were quickly able to adapt and eventually survive among the Pakeha's exotic trees and shrubs, many others could not live without the native bush.

The Europeans learnt from the Maori which birds were good eating and the then plentiful pigeons provided many a good meal to supplement an otherwise meagre diet. Pigeon fat was even used as a substitute for butter.

While the main effect of the land clearing was on the bush birds; those of the mountain and open country also had their lives changed, but not always for the worse. The harrier spread widely after the arrival of the European who opened up large tracts of country and thereby added to its food supply. The pipit survived but tended to retreat to less cultivated areas. But the native quail had no chance, relying as it did on walking and running and seldom flying any distance. The Maori hunted it with snares and nets, and for the Pakeha it was good shooting both for sport and food. Cats and dogs could catch it with ease, so it soon became extinct.

BIRDS - Introduced Birds

To redress the balance, though this was not their intention, the Pakeha brought their own birds with them. Towards the end of the 19th century about 100 species were imported from Europe, North America and Australia and liberated here. About three dozen of them survive. Most of these newcomers were brought in to make the new land more like the old home country. The finches, blackbirds, thrushes and mynas were popular cage birds gladly brought in by immigrants to keep as pets.

Although game birds such as pheasant, quail and partridge were introduced, along with ornamental water birds, the majority were tree-nesters who found conditions to their liking. The blackbird, song thrush and chaffinch have ventured successfully into the native forest and on the whole the native and introduced species have integrated well and live side by side with little competition.

BIRDS - Migratory Birds

The migratory birds are an important and fascinating part of NZ's avifauna. One of the great mysteries of nature is exactly how flighted creatures, some of them very small, can find their way and endure the rigours of travelling vast distances from one end of the world to the other, year after year, in order to breed in one place and winter in another. For many this is essential. Birds do not hibernate and those who breed during the brief summer in Arctic regions must move elsewhere in the winter to survive.

The migratory birds fall into three main groups. The majority, most of which are waders, travel south to avoid the northern hemisphere winter. They come from their breeding grounds in northern Asia and north-west America, arriving about September and leaving again in March and April. They mainly frequent tidal estuaries and wide river mouths, but there are few parts of the coastline they do not visit.

The godwits come in the largest numbers, often accompanied by knots. Turnstones and eastern golden plovers are the next most numerous, but it is estimated that 40 species of waders from the northern hemisphere have been sighted in NZ and ornithologists keep a close watch on flocks of migrants for rare visitors, some of which are hard to identify among the large groups feeding along the shore.

A few, mainly immature birds remain here for the winter but the vast majority embark on the long journey north as soon as the summer here ends, many of them by then showing the brighter colours of their breeding plumage.

The second group of migrants breed here and winter elsewhere. The three larger shearwater (the sooty, or muttonbird, the flesh-footed and Buller's) breed on many of the islands round the coast and then spend the months from May to October in northern and eastern parts of the Pacific. The two cuckoos (long-tailed and shining) usually arrive about October and in February return to their winter homes in the tropical Pacific islands.

A number of waders which migrate within NZ comprise the third group, the most noteworthy being the unique wrybill which breeds only on larger South Island river beds and then moves north to winter in the harbours of the Auckland area. Most South Island pied oystercatchers and pied stilts, which also favour river beds for nesting, tend to winter in the northern parts of the country, and numbers of banded dotterels cross the Tasman annually as well as travelling north within NZ.

Other migrants are the arctic skua, which also reaches NZ from the northern hemispheres, and the young gannets, most of whom spend their first five years in Australian waters before returning to NZ to breed.

BIRDS - Endangered Birds

```
{ewc
MVIMG,

videocam.dib
}
```

According to one estimate, there are more than 50 endangered bird species in NZ, but this figure is debatable for it includes many birds which are not so much endangered as rare. These are exclusively NZ birds which could only become truly endangered if any more of their habitats were damaged, altered or destroyed. This 'at risk' list includes a number of penguins, albatrosses and petrels, some of the shags, the falcon, wrybill, kaka, kea and kakariki, fernbird, brown creeper, whitehead and yellowhead.

The birds whose status is considered critical include the kiwis, two Chatham Island petrels, the brown teal and the Auckland Island teal, blue duck, the Auckland Island rail, the sub-antarctic snipe, the shore plover, the kakapo, black robin, stitchbird, saddleback and kokako. The bush wren has not been seen for some years and is now presumed extinct, as is the NZ thrush, or piopio. But the takahe, or notornis, long considered to be extinct and unnoticed for 50 years, was rediscovered in Fiordland in 1948. Successes include the re-establishment of the black robin, saddleback and stitchbird, and the rearing in captivity of such birds as the takahe.

BIRNIE, Tessa Daphne

Tessa Daphne Birnie (1934–) was born in Ashburton and educated privately in NZ and England before becoming a professional concert pianist with a tour of Europe in 1950. She has toured as a pianist many times since, has made recordings over a wide range of piano music, is a musicologist with an unrivalled knowledge of keyboard literature since the 14th century, and is an accomplished linguist and photographer. She has lived in Sydney for many years.

BISHOP SUTER ART GALLERY

Bishop Suter Art Gallery was built in Nelson in 1898 as a memorial to Andrew Burn Suter, the second Bishop of Nelson (1866–91), who was not only a religious leader but prominent in the city's cultural and educational life. The building was to house valuable works of art he bequeathed to Nelson as the nucleus of a municipal collection. Among Suter's gifts were 26 works by John Gully, one of the most admired of NZ's early watercolourists.

In the years since the gallery was first opened the collection has been regularly expanded through purchases helped by gifts and bequests. It now includes 42 John Gully watercolours; John Webber's 'Cook's Cove' (painted around 1778); the Davies-Woollaston collection of more than 100 drawings and water-colours by Sir Tosswill Woollaston; and many other fine works by top NZ painters from the 1850s through to the present time.

Bitterns (Ardeidae) are now represented in NZ only by the Australasian brown bittern (*Botaurus poiciloptilus*), a large (71 cm long), mottled brown, heron-like bird, with broad rounded wings. It flies with its long neck tucked in, is not easily seen because of its skulking habits, but is widely distributed in both islands in marshy places and reed beds. It is an occasional visitor to offshore islands such as Kapiti and Great Mercury, and is believed to breed at the crater lake on Mayor Island. The female builds a nest which is a firm platform of sedge or rush, preferably in a bed of raupo. She lays 3 to 5 greenish eggs between September and January, and incubates them for up to 25 days.

The little bittern (*Ixobrychus novaezelandiae*), now believed to be extinct, was a secretive little (30 cm long) bird, last reported in Meremere in 1963, but this report was not verified. No reported sightings have come from the South Island since the 19th century.

Blackbird (*Turdus merula*) introduced last century, ranges throughout NZ and also dwells on numerous offshore islands, between the Kermadecs and Campbell Island. It lays between two and five bluish-green eggs, speckled with red-brown, between July and December, in low, ill-concealed nests. It feeds mainly on the ground.

BLACK MOUNTAIN RINGLET

Black Mountain Ringlet (*Percnodaimon pluto*) is NZ's high alpine butterfly, confined to the rock and scree slopes of the South Island mountains.

Velvety-black with faint greyish markings, this sun-loving insect soars effortlessly across steep rocky slopes very close to the surface, riding the updrafts and alighting on the warm stones to bask in the sun. It retreats under the rocks during cold weather. The larva is a nocturnal feeder on a small mountain grass (*Poa colensoi*) and takes 2–3 years to reach maturity. The mature wingspan is between 39 and 54 mm.

```

Peter James Blake (1949–) was born at Auckland, brought up in the seaside suburb of Bayswater, began racing boats at age eight, and has become NZ's most experienced and best-known blue water sailor. He is a veteran of the five Whitbread round-the-world races and has raced and cruised more than a quarter of a million ocean miles.

Blake was on *Burton Cutter* for the first Whitbread in 1973–74 and on *Condor* for the second race four years later. *Burton Cutter* did not complete the race, and *Condor* lost any chance of victory when its mast broke on the first leg. For the 1981–82 race, Blake helped supervise the design and construction of Bruce Farr's 68 ft *Ceramco NZ*, and skippered it under NZ sponsorship. Twenty-four days into the first leg, the mast broke, but its overall placing was 11th. He skippered the NZ-designed, sponsored and crewed boat, *Lion NZ*, in the 1985–86 race and with *Steinlager 2* in 1989-90 won every leg of the Whitbread. He has since completed the fastest circumnavigation of the world in a giant catamaran.

Blake was knighted after Team New Zealand won the America's Cup at San Diego in 1995. He was first involved in the cup in 1992 when he managed Sir Michael Fay's campaign at San Diego. He was placed in charge of New Zealand's America's Cup defence in 2000.

Blake's philosophy seems to be "stay in to win". It took him two attempts to complete a nonstop circumnavigation of the world. He was once quoted as saying: "The winners are the ones who keep coming back — not those who lose and give up. They are the losers."

BLEDISLOE, Viscount Charles Bathurst

```

```

Viscount Charles Bathurst Bledisloe (1867– 1958) was Governor-General of NZ from 1930 until 1935. He was educated at Eton and Oxford, was called to the Bar in 1892 and practised law for 16 years. When he inherited his family estate on the death of his older brother, he took a course at the Royal Agricultural College, Cirencester, was awarded the gold medal, and agriculture became his consuming interest for the rest of his life. He was a member of the British parliament from 1910 until 1928, for a time parliamentary secretary to the Ministry of Food and later parliamentary secretary to the Ministry of Agriculture.

Bledisloe travelled widely within NZ during his term of office and if his enthusiasm for agriculture sometimes made his speeches laborious, it also endeared him to a nation so close to the land. His enthusiasm for the work of many of the societies of which he was patron gave him widespread and positive publicity. During the depths of the Depression, he volunteered a 30 per cent salary cut to match those being made in the pay of public servants.

In 1931 the Waitangi Estate, including the old British Residence where the Treaty of Waitangi had been signed, came on the market. Recognising its importance in the history of NZ, Bledisloe bought the property and presented it to the nation. Bledisloe also contributed to the fund to renovate the Treaty House.

As a president of the Royal Agricultural Society of England, Bledisloe revisited NZ in 1947 and was warmly received. The Bledisloe Cup, symbol of Australia-NZ rugby supremacy is named after him.

```

Blenheim is situated on the Wairau Plain, in central Marlborough, 27 km south of Picton and 330 km north-east along the coast from Christchurch. The population of the urban area is over 23,000, and it is the administrative centre for the Marlborough District Council which has a population of 38,000.

Although sheep farming began in the district in the 1840s, the first established settler of the modern town of Blenheim was Scotsman James Sinclair who opened a store on the site in 1852. The first burst of mass settlement was in 1864 when gold was discovered in the Wakamarina River, 30 km to the north-west.

The province of Marlborough was detached from Nelson Province in 1859, and named by the Governor, Sir Thomas Gore Browne, after John Churchill, the first Duke of Marlborough. The first provincial capital was Picton but this was transferred to Blenheim in 1865. It is assumed that Gore Browne gave the name Blenheim after the famous victory in which the Duke of Marlborough's army had been involved in 1704. The settlement was known as 'The Beaver', however, for some years because the first survey party into the area had been caught in a flood and been forced to squat on the highest bunks in their huts until the water receded.

Blenheim was constituted a borough in 1869. The town is 8 km from the coast (Cloudy Bay) but the Opawa River on which it stands is navigable by small vessels and provides limited port facilities.

The central industry of the region remains sheep farming but the Wairau Plain is now a major wine-growing region. It also produces fruit and vegetables for processing, with some dairying too. Blenheim has on average more sunshine hours each year than any other centre.

BLIND

Blind people in NZ today, and those with seriously impaired sight, total about 11,000 and the national effort towards helping them cope with their disability is centred on the Royal NZ Foundation for the Blind with its head office in Auckland.

In 1889, when there were 214 blind people in the country, a public meeting was held in Auckland to form the Association of the Friends of the Blind. The following year, the 50th anniversary of the colony, the association was incorporated under the name of the Jubilee Institute for the Blind.

The institute gradually assumed responsibility for the blind throughout the country. In 1926 the name was changed to the NZ Institute for the Blind, in 1952 to the NZ Foundation for the Blind, and in 1971 to the Royal NZ Foundation for the Blind. As the years went by, government legislation giving support to the nation-wide services for blind people was updated and consolidated — in 1955, 1959, 1963, 1972 and 1979.

The aims of the foundation have been spelt out officially as:

- to provide for the care, relief, education and training of blind persons, the amelioration of their condition, and the maintenance and promotion of their general welfare
- to provide and maintain such institutions, establishments, accommodation, services and equipment for the benefit of blind persons as may be necessary or expedient from time to time.

Modern policy is to help the blind live normal lives rather than to institutionalise them.

The foundation is divided into four regions, each headquartered in one of the main centres, and each served by a number of district advisory committees.

The Homai Vision Education Centre at Manurewa, 18 km south of Auckland, is a national resource centre for students from birth to age 21. The centre provides a range of educational materials, in-house educational programmes, and support systems for those students in local schools; as well as specialist itinerant teachers, and training programmes for other teachers involved in caring for the visually impaired.

Homai has a pre-school training unit; primary and intermediate school departments and accommodation and special care for secondary school pupils attending Manurewa High School; an adult rehabilitation unit as well as a number of other special units for educating and training the blind to adjust to living in the community.

Social centres are situated in a number of cities, along with hostels for the elderly at Auckland, Wellington and Christchurch. Library services for sound tapes and braille books, and vocational and other counselling services are all available on a national basis.

Charles Blomfield (1848–1926) was a self-taught painter, born in London, who arrived in Auckland in 1863. He travelled widely and is noted for his detailed landscapes of the Auckland area, his many studies of native bush, most notably kauri trees, and for his painting, ‘The White Terraces at Rotomahana’, which he painted in 1897 from sketches he had made on the spot before the Tarawera eruption buried the terraces in 1886.

```

Blue butterflies are a group of small (17–27 mm wingspan) butterflies represented in NZ by two species, one of which is extremely common and has two distinct forms (subspecies).

The common blue (*Zizina otis labradus*) which is also found in Australia, New Caledonia and some neighbouring Pacific Islands, is undoubtedly the most abundant of our butterflies, appearing throughout summer and autumn over the North Island and in Nelson, Marlborough, Westland and the Chatham Islands. At times it could even be considered as a pest of clover on which the green slug-like larva feeds.

The southern blue (*Z. o. oxleyi*), is found in Canterbury and Otago, particularly around the dry foothills of the ranges. It is also a clover feeder but must have relied upon its native foodplant, the broom (*Carmichaelia*), in pre-European times.

Males are bright blue above with a dark brown border; and females are largely brownish with blue only at the base of the wings.

The other blue butterfly is a recent immigrant which was first reported in 1965. It can be distinguished from *Zizina* spp. by two dark spots on each hindwing, between which is a short, hair-like tail. Variously known as the long-tailed blue, or pea blue (*Lampides boeticus*), this rather more active species is migratory and almost worldwide in its distribution.

It is established in North Auckland, Auckland, Taranaki and Nelson. Its main food is the flowers of gorse inside which the larvae live and feed.

Bluenose (*Hyperoglyphe antarctica*) is one of the warehou family, a large heavy-bodied fish between 60 and 80 cm long and weighing up to 20 kg. It is dark blue-grey on the back, paling to silver on the sides and belly. Bluenose is locally common all round NZ near rocky areas in depths of 100 to 300 m and is caught by longline and occasionally in trawls. The flesh is similar to that of the grouper but the fish itself is distinguished by its laterally compressed body, a larger eye and a blunt snout.

Blue reef heron (*Egretta sacra*) lives on rocky coasts, eating fish and crustaceans caught in the tidal zone. Usually solitary or in pairs, a dozen or so may congregate at high tide, particularly those that inhabit northern harbours. It is most common north of a line drawn through the Raglan-Bay of Plenty region. It nests in rocky fissures and caves. Nests comprise mainly sticks. They lay 2 to 3 eggs and both sexes incubate.

```

Bluff is a town 27 km south of Invercargill, situated on the north-eastern side of The Bluff, a knoll at the southern end of Bluff Peninsula which extends out into Foveaux Strait. A trading post was set up there in 1824 by a sailor James Spencer who hoped to do business with the whalers of Foveaux Strait. Later a shore whaling station was established where the town was eventually built. The area was not heavily populated by Maori at the time of the arrival of the first European settlers but there was a pa at Ocean Beach.

Today Bluff Harbour and the adjacent Awarua Bay are the base for a fishing fleet which takes grouper, crayfish and blue cod from Foveaux Strait and which dredges the fat and succulent Bluff oysters, although this work is reduced since the oyster beds were struck by disease. The shipping service to Oban on Stewart Island runs from here. The Tiwai Point aluminium smelter is on the eastern side of Bluff Harbour.

The town of Bluff was named Campbelltown when the settlement was first surveyed in 1856, after the family name of the wife of Governor Sir Thomas Gore Browne. The area had been known as 'The Bluff' since the time of the first trading post set up by James Spencer in 1824, however, and the new name failed to impress itself on the locals.

The Bluff is also the name for a knoll on Ninety Mile Beach, near Mangonui, in Northland.

A residential area, overlooking the main commercial area of Napier City on the one side and the port on the other, is called Bluff Hill.

BLUNDELL, Sir Edward Denis

Sir Edward Denis Blundell (1907–1984), the son of Percy Fabian Blundell, was the 12th Governor-General of NZ, for five years, from 1972.

He was born in Wellington, educated at Waitaki Boys' High School and Cambridge University, played cricket for Cambridge and NZ between 1927 and 1936, was called to the Bar in 1929 (at Gray's Inn) and began practising in Wellington in 1930. He was a successful lawyer, became a prominent sports administrator and was director of a large number of major NZ companies before his appointment as High Commissioner for this country in Britain, in 1968. His term in London was followed immediately by his appointment as Governor-General.

BLUNDELL, Henry

Henry Blundell (1814–78) was born in Dublin, trained there in the printing trade, and became involved in the management of the *Evening News* in Dublin, before emigrating to Victoria and then to NZ where he worked first on the *Lyttelton Times* and then on the *Otago Daily Times*. With an associate, he founded the *Havelock Mail* at the time of the Wakamarina goldrush, and then in 1865 moved the plant to Wellington to found the *Evening Post*, the city's first daily newspaper.

The *Evening Post* was consolidated by his son, Louis Proctor (1849–1934), who was born in Dublin and accompanied his parents to NZ. He continued the reputation for independence and integrity established by his father. The Blundell family maintained control of the newspaper through a nephew of Louis', Henry Percy Fabian, who was a director from 1917 until his death in 1961, and a grandson, Henry Neil who was chairman, until it became a part of the Independent Newspapers Ltd group in the mid-1970s.

John (Jack) Stanley Body (1944–), was born in Te Aroha, graduated M Mus from the University of Auckland and has taught at Victoria University in Wellington since 1980. His music covers most genres, including solo, chamber and orchestral, music for the theatre and for dance and film as well as electroacoustic. A special interest is the music of South-East Asia, especially Indonesia, and this has had a strong influence on his own composition. His *Music Dari Jalan* (Music from the Streets) won first prize at the 1976 Bourges Competition for Electro-acoustic Music. Several of his field recordings of traditional Asian music have been published. He actively promotes the work of other NZ composers, is editor of Waiteata Press Music, the principal published of NZ scores, and was the instigator and artistic director for Asia-Pacific conferences and festivals in Wellington in 1984 and 1992. He is also an experimental photographer of note, with work exploring the relationship between sound and image.

```

James Brendan Bolger (1935–) became the 52nd Prime Minister of NZ, as leader of the Parliamentary National Party, after the general election of 1990. His government was re-elected in 1993.

Bolger was born in Opunake in 1935, the son of Daniel Bolger and Cecelia Dyle, and educated at Opunake High School. He farmed in Taranaki until 1965, when he bought a sheep and beef cattle property in Te Kuiti. He became chairman of the local branch of Federated Farmers and by 1971 was a member of the national executive.

Bolger entered parliament for King Country in 1972 and after a number of Cabinet posts, such as Minister of Maori Affairs, he began to make his mark as an effective Minister of Labour in the Muldoon administration, from 1978–84, and was ranked sixth in the Cabinet when the government lost to Labour in 1984.

He was deputy leader of the party from November 1984 until March 1986, when he gained the top post.

BOLITHO, Henry Hector

Henry Hector Bolitho (1898–1977) was born in Auckland, became a journalist on the *Auckland Star* and, after a period on country papers in NZ and as a freelance journalist, he moved to Sydney and then went to Europe as a correspondent for Australian newspapers. Bolitho settled in London and became the best-known royal biographer of his time, his works including *Reign of Queen Victoria*, *Albert the Good* and *A Century of British Monarchy*. He was also a novelist with *Solemnboy* (1927), *Judith Silver* (1929), both about young NZers, and *The Flame on Ethirdova* (1930) and *No Humour in My Love, and Two Other Stories* (1946). Bolitho became an established writer of non-fiction in Britain with more than 30 books of biography and travel.

BOOK PUBLISHING

Book publishing has been a thriving industry in NZ since the 1950s but its very beginnings go back further than that and, indeed, the first book published about the country was issued in England in 1773. It was *Cook's First Voyage* by John Hawksworth using material from the journals of James Cook, Joseph Banks and others who were aboard the *Endeavour*.

Forty-two years later the first book published here, though it was printed in Sydney, was *A Korao no NZ*, an attempt by the missionary Thomas Kendall to put the Maori language — previously without a written form — into the English alphabet. It was in the form of a grammar and vocabulary book.

William Colenso installed a press at the Paihia mission station and the first book printed and published here was a Maori language version of St Paul's Epistles to the Ephesians and Philippians. That was in 1835 and the following year the same press was used to print the first book in English in this country, although the term 'book' is perhaps flattering a pamphlet noting the formation of the NZ Temperance Society to combat drunkenness among visiting sailors and some of the residents of the Bay of Islands.

In 1861, what is now regarded as the first NZ novel was published in Auckland by W C Wilson, one of the owners of *The New Zealander*, forerunner of the *NZ Herald*. The title was simply *Taranaki*, written by Major H B Stoney. It was a romance in the setting of the preliminary clashes of the Land Wars.

One of the most famous of the early books, *Old NZ*, by F E Maning (using the pseudonym, 'A Pakeha Maori') was published both in Auckland and in London in 1863. For the rest of the 19th century, a number of books were published here by newspaper companies or printers but many of these were merely tracts. The ambition of most NZ writers was to be published in London, and most works of substance were. Without an English market, it was difficult economically to justify a book's publication here.

There was also a problem with plant. Although printers had adequate machinery and expertise for newspaper, magazine and business printing, they did not have enough of a market for books to warrant hiring expert bookbinders or buying appropriate machinery.

According to James Burns's *Bibliography*, 64 NZ works of fiction were published by 1930, 38 of them in London, two in Melbourne and one each in New York and Brisbane. This trend became even more pronounced in the 20th century up to World War Two. Of the 178 works of NZ fiction issued between 1900 and 1939, more than 140 were published by overseas companies, mostly in London or Sydney. Although the printing and bookselling firm of Whitcombe and Tombs (now Whitcoulls) emerged as a force in local publishing before the turn of the century, most of their books were rather primitive products on a wide range of practical, non-fiction subjects.

A H Reed Ltd, a Dunedin bookselling firm founded in 1907, began publishing religious books in the 1920s, and when it moved into general publishing in 1932, the imprint A H and A W Reed was adopted (uncle A H and nephew A W). Some significant books were published in the 1930s but the company began an expanded publishing programme in 1946 that gave it at one stage the largest annual title output in either Australia or NZ. Included were general and educational books for both the NZ and Australian markets.

The post-war period was a golden age of publishing here, when NZers' appetite for books about themselves seemed insatiable. Reed's was the dominant company from the 1950s through the 1970s, producing about 100 new NZ books a year. Other active publishers then were Whitcombe and Tombs, Pegasus Press, Caxton Press, Pauls, McIndoe, Penguin, Collins, Hodder and Stoughton, Heinemann, and the Oxford and Cambridge University Presses.

By the end of the 1970s, 35 or more works of NZ fiction were being published in a single year, mostly locally but some with simultaneous publication overseas. Since then the number has varied widely depending on conditions. With the exception of one or two publishers, most companies now publish little fiction unless it is assessed as having a potential market overseas.

New non-fiction titles over the whole field of general and educational publishing now number more than a thousand every year, most of them aimed solely at the NZ market. And that market is one of the largest in the world, proportionate to the population, if not the largest.

Television and more recently video cassettes have cut into sales and thus into the number of booksellers who offer comprehensive sales and service. NZ-owned publishing houses have diminished in number because of takeovers and book output has declined at a time when affluence has increased.

A lucrative export trade in children's educational and fiction books has developed since the early 1980s.

BORDERDALE

Borderdale sheep were developed in NZ in the 1930s from crossing Border Leicesters with Corriedales. It is a long wool, dual-purpose breed for producing meat and wool on flat land or rolling hill country, and is found mostly on improved or irrigated pastures in Canterbury.

It is a polled, medium to large sheep with white face and legs. Wool fibre diameter is 30 to 35 microns, staple length 100 to 150 mm, fleece weight 4.5 to 6 kg, and lamb production 110 to 130 per cent.

BORDER LEICESTER

```

Border Leicester sheep first arrived in NZ in 1859 when one ram and nine ewes were landed for the Australia and NZ Company of Otago from Britain where the breed had evolved in the region of the England-Scotland border. Last century Border Leicester sires were used over merino ewes for heavyweight lambs and wether mutton, and the breed played a significant part in the development of the NZ halfbred.

Noted for its fertility and good mothering qualities, the breed is used nowadays to increase fertility in commercial Romney and Corriedale flocks. It has been used in recent years to develop the Coopworth breed (with Romneys) and Borderdale (with Corriedales). It is a dual-purpose sheep, large, long-legged with a clear white face and legs and Roman nose, and although it is present throughout most of the country because it is used mainly for crossing with Romney ewes, its numbers are small. The wool fibre diameter is 37 to 40 microns, staple length 150 to 200 mm, fleece weight 4.5 to 6 kg, and lamb production is 110 to 130 per cent. The wool is long and lustrous with individual staples easily separated, and it is used for upholstery, dress fabrics, lining materials and hand-knitting wools.

BORER

```

b1160pas.dib
}
```

Borer insects are not now the destructive agents they once were in NZ's predominantly wooden dwellings because of the standard use of treated timbers in modern buildings. By far the most common of these borers is the European houseborer (*Anobium punctatum*), sometimes called the furniture beetle, which attacks both native and exotic timbers. The dark grey to black beetles are 3–5 mm long and have a hood-shaped thorax that covers the top and front of the head.

The beetles emerge from October through January but mostly during December. Sometimes the beetles lay eggs deep inside the wood they inhabit and don't leave for several generations. When they do fly, eggs are laid within the exit holes in the wood or in nail holes, cracks or in any abrasions on the surface. The cycle from egg to beetle varies according to environmental factors such as temperature and moisture within the inhabited wood.

The pine knot borer (*Ernobius mollis*), about 6 mm long and also with a head-covering thorax, inhabits and attacks growing exotic conifers; and the very similar large wood borer (*Hadrobregmus magnus*), a native called huhu by the Maori, is common in very damp timber. The exit holes are much larger than those of the European houseborer.

Two borers which inhabit sapwood and leave holes similar in size to those of the European houseborer are a native weevil (*Torostoma apicale*) and the exotic European powder post beetle (*Lyctus brunneus*).

Some species of termites, which live in colonies the way ants do, are also present in NZ but they leave no external signs as they destroy the interior of timbers. Their main habitats are dead wood in the bush, but the drywood and subterranean species sometimes invade dwellings where the timber is untreated.

BOULDER BANK

```

}
```

Boulder bank is a bank of cobbles, pebbles and boulders separating the sheltered harbour of Nelson Haven from Tasman Bay and a unique natural feature. The shelter and protection it provides for shipping was the main reason for the establishment of the harbour, and the settlement of Nelson.

Boulder Bank extends for 13.5 km from Glenduan ('The Glen') south-westwards to Magazine Point. Except for its take-off at The Glen it lies approximately 1.5 km offshore. Towards its south-western end the bank is interrupted by an artificial cut ('The Cut') constructed in 1906 to provide better access to Nelson Haven.

Rocks represented in the bank are granite, granodiorite, diorite, syenite and tonalite and range in size from pebbles to boulders up to 800 mm across. It is thought Boulder Bank has built up over the past 10,000 years, since the end of the Ice Age.

Bounty Islands, a cluster of 13 barren rocks, lie at Lat 47° 43' S and Long 179° 5' E, 788 km east of Stewart Island. They were discovered and named by Captain William Bligh in HMS *Bounty* in 1788. Also named after Bligh's ship is Bounty Haven, at the head of Bligh Sound, on the western coastline of Wallace County, in Fiordland.

BOUZOID, Christopher Bernard

Christopher Bernard Bouzoid (1943–) was one of NZ's most successful ocean racing skippers, and virtually launched the sport in this country by winning the One Ton Cup in 1969. Bouzoid was born in Auckland in 1943, educated at Sacred Heart College, Auckland, became a sailmaker and established himself as a successful yachtsman as a young man. When he was 25 years old he sold his home to build a 36-foot yacht, *Rainbow II*. He won the Sydney-Hobart race with the boat in 1967, was second in the One Ton Cup the following year, and in 1969 off Heligoland, Germany, won the cup with an unprecedented four straight wins. Before he sold *Rainbow II* in Bermuda later that year, Bouzoid won a string of other races, including the Channel Race and her class in the Fastnet classic, at Cowes.

It was NZ's first major international ocean racing success. Bouzoid and his crew returned to a motorcade welcome up Queen Street, Auckland, and a civic reception. He was NZ Sportsman of the Year in 1971 and won the One Ton Cup again in 1972 at Sydney in *Wai-aniwa*.

BOWEN, Sir Charles Christopher

Sir Charles Christopher Bowen (1830–1917) was an outstanding first-generation NZer with energy, intellect and the kind of humanistic tolerance that helped give the country a brilliantly liberal tradition. He was born in County Mayo, Ireland, and educated in France for some years before going to Rugby and to Cambridge to study for the Bar. His father, Charles Bowen, was, however, deeply involved with the Canterbury Association and brought the family to Christchurch on the *Charlotte Jane* in 1850 before the son qualified.

The younger Bowen was private secretary to Godley, was appointed at the age of 22 inspector of police and was involved in the capture and prosecution of super sheep-stealer James Mckenzie. At 24 he became the provincial treasurer, and at 26 one of the proprietors of the *Lyttelton Times*, to which he had already been contributing for several years.

In 1860 Bowen travelled to Peru, crossed the Andes, travelled through the US and Canada and on to Britain. On his return he was appointed resident magistrate in Christchurch, but in 1874 became a member of the Legislative Council and Minister of Justice, a post he retained through several brief administrations until 1877. It was his bill that ensured for NZ for nearly 100 years a system of free, compulsory and secular education. He had become the MP for Kaiapoi in 1875 and retained the seat until 1881. He was appointed a life member of the Legislative Council in 1891 and was Speaker from 1905 to 1915.

Bowen read French almost as readily as he did English and was a poet of some talent, delighted in the Greek and Latin Classics and was a lover and student of trees. He was a polished and kindly man according to his contemporaries.

BOWEN, Sir George Ferguson

```

Sir George Ferguson Bowen (1821–99) succeeded Sir George Grey as Governor of NZ in 1867, a time when the country was seriously embroiled in the land wars between Maori and Pakeha, but he was not directly and solely responsible for native affairs as his predecessors had been. It had become a collective government responsibility.

Bowen was born in Ireland, educated at Oxford, became president of the University of Corfu in 1844 and established a reputation as a scholar. In 1859 he was appointed the first Governor of Queensland which had been split from New South Wales.

During the first two years of his term in NZ, Bowen tried to understand the Maori position and took a moderate stance on the issues, advocating a peaceful arrangement with the King tribes who did not support the savagery of the Hauhau. By 1869 the fears of a general Maori uprising had waned. He left NZ to take up the governorship of Victoria in 1873.

Bowen became Governor of Mauritius in 1879, of Hong Kong in 1882, and retired to Britain in 1887 because of ill-health. He was nominated a Privy Councillor in 1886, and in 1887 chaired a royal commission to report on the working of the constitution in Malta.

Walter Godfrey Bowen (1922–) was a world record-breaking shearer whose technique and ability to expound it made him well known among sheep farmers round the world. Bowen was born in Te Puke, began shearing at the age of 16, was a fulltime professional shearer for eight years and in 1953 set a world record by shearing 456 full-wool sheep in nine hours. In 1960 in Wales he sheared 559 Welsh mountain sheep, and the following year, back in NZ, tallied 463 full-wool Perendales in a nine-hour working day. His brother, Ivan, was also a world record-holding shearer.

Bowen worked for the NZ Wool Board as field director for 22 years visiting agricultural shows round the world giving advice and demonstrations on the shearing of sheep. Known more commonly by his second given name, Godfrey, he established a reputation as an extrovert and entertaining speaker who impressed and amused audiences in many countries. He was a driving spirit behind the founding of the Agrodome, an agricultural exhibition centre for tourists at Ngongotaha, near Rotorua.

Bowls on outdoor greens became officially organised in NZ in 1886, when the 12 clubs in Dunedin, Invercargill, Balclutha, Auckland, Lawrence, Christchurch, Oamaru, Milton and New Plymouth met together to form the NZ Bowling Association and hold the first national tournament in Dunedin. The development of the game, which has always attracted a large number of players but has shown little spectator appeal until it became professional in the 1980s, developed on a fragmented basis until 1913 when the Dominion of NZ Bowling Association was formed, pulling together all the bowling groups in the country.

The first bowling club was formed in Auckland in 1861, and games were played in Wellington and in Dunedin during that decade. Clubs were formed over the following years in Christchurch, and the first country club was at Milton, South Otago. The first national men's championships were held in 1914.

Indoor bowls was also introduced to NZ in Auckland, at first as a social game conducted by the friendly societies that were familiar institutions in the first half of the 20th century.

The first women's lawn bowling club was formed in Wellington in 1906 using the greens during the week that the men's clubs used at the weekends. Women's national championships began in 1951.

BOXING

```

TOPIC")] !
m2100pas.dib
}
```

Boxing became an organised sport in NZ with the formation of the NZ Boxing Association at Christchurch in 1902. The association was an all-amateur organisation, but controlled both amateur and professional boxing.

Immediately after its formation, the Boxing Association organised the first NZ championships in Christchurch. Until mid-way through the 1920s, NZ and Australian amateur boxing were very closely related, and for many years inter-dominion tournaments were held. They were revived briefly during the 1930s and again at the beginning of the 1960s, but the cost of holding these championships frustrated them.

One NZer, E J Morgan of Wellington, won an Olympic gold medal as a welterweight in 1928, and light-heavyweight Kevin Barry from Christchurch won a bronze medal at the 1984 Olympics after being knocked down by a late punch from later world heavyweight champion Evander Holyfield. Three NZ boxers who have won Commonwealth Games gold medals are F Creagh of Wellington, a heavyweight, in 1950; W Coe also of Wellington, a welterweight, in 1962; and M Kenny of Wellington, 1990. More recently, Jimmy Peau and David Tua both established themselves as among the best amateur heavyweights in the world and have gone on to successful professional careers.

Amateur boxing was a major NZ sport until the 1950s, when social pressure was applied to stop secondary schools from conducting boxing championships and it is now a minor sport.

Professional Boxing When amateur boxing was strong, a steady stream of top amateurs moved into the professional ranks and gave professional boxing a status as a major sport and crowd attraction. The first recorded professional boxing match in NZ took place in July 1862 near Christchurch, between George Barton, described as a 'navvie', and Harry Jones, a former London prize ring fighter who won the £100 stake, after 30 rounds. Attempts were made by the police to stop the fight, and at one stage they took possession of the ring with revolvers drawn. They were obstructed by the crowd, however, and the fight continued. Summonses were issued but were allowed to lapse, perhaps because it was discovered later that the spectators included the Crown Solicitor, several Members of Parliament, a number of town councillors and even magistrates.

During the last two decades of the 19th century two world champions came from this country — Bob Fitzsimmons at middleweight, light-heavyweight and heavyweight, and 'Torpedo Billy' Murphy at featherweight.

In 1905 the first official professional contest was fought at Wellington between George Keys of Australia and Tim Tracy of NZ. The 1920s and 1930s were a golden age of professional boxing and in 1928, Gisborne fighter Tom Heeney fought Gene Tunney for the world

heavyweight title at Yankee Stadium in New York, losing in the eleventh round. There was a brief resurgence of professional boxing in NZ after World War Two, with two successful competitors being Bos Murphy and Barry Brown. Murphy won the Empire title during the 1940s, and Brown the Empire title in the 1950s. Murphy was a welterweight and middleweight and Brown a welterweight. During the 1950s a Tongan, Kitone Lave, was the first of a long succession of Pacific Island boxers who nowadays dominate the sport in NZ as amateurs and professionals. Tuna Scanlan won the Empire middleweight title in 1964. Professional boxing has been a declining sport with diminishing attendances since the early 1960s.

BOY SCOUTS

(See Scouts)

BOYD

Boyd was an English vessel of about 500 tons under the command of Captain John Thompson which arrived at Whangaroa in August 1809 to take on a cargo of spars for the Cape of Good Hope. Among the passengers were several Maori including a young Whangaroa chief named George. When the captain and some of the crew went ashore to inspect the timber they were set upon by Maori and murdered. The Maori took possession of the *Boyd*, murdered most of the passengers and crew and accidentally ignited a cask of gunpowder which killed 14 Maori and set the ship alight. The Maori explained that the plundering of the *Boyd* and the massacre were in revenge for the flogging of the chief, George, during the voyage. News of the event, reaching New South Wales and England, deterred would-be traders and settlers for some years.

BRACKEN, Thomas

```

Thomas Bracken (1843–98) was the author of NZ's national anthem *God Defend NZ*, and the country's most popular poet in the 19th century. His *Not Understood* was for a period lasting well into the 20th century more widely known among NZers than any poem written here before or since.

Bracken was born in County Monaghan, Ireland, was orphaned by the age of nine, sent to work for an uncle farming near Melbourne, was then apprenticed to a pharmacist in Bendigo, worked as a farm hand and prospector for some ten years, and arrived in Dunedin at the age of 26 in 1869.

He was a tall and extrovert man and quickly became a well-known figure in his adopted city. With Alexander Bathgate he established the *Saturday Advertiser*, in which both *God Defend NZ* and *Not Understood* first appeared, and he encouraged Dunedin writers by making space available for them. At his second attempt, in 1881, Bracken won a seat in parliament, strongly backed by the Dunedin Trades and Labour Council. He was defeated in 1884, then re-elected for less than a year in 1886. When there was a dissolution, he decided not to stand again.

As a journalist and politician, Bracken had solidly supported those he considered oppressed. His parents were Protestants and early in his political career he had strongly opposed religious teaching in schools. He had, however, helped in the founding of the Catholic newspaper *Tablet*, later changed his views on religion and education and became a convert to Catholicism before he died. During the last ten years of his life, his business affairs did not prosper, with failures in both newspaper and book publishing, and his health deteriorated during the 1890s.

Bracken's reputation as a poet has declined since World War One until he hardly rates a mention now when serious poetry is discussed by critics. His techniques were crude and imitative and his tone indulgently sentimental. But E H McCormick has written of him: 'At his best he has some of Longfellow's knack of expressing the plain man's thoughts about life and death and love in simple measures and apt phrases.'

His best-known book, *Musings in Maoriland*, was pretentiously designed and produced (printed in Leipzig) but did not do as well as he had hoped and sales in Australia did not reach anything like the level he had expected. There are many copies extant.

BRAITHWAITE, Henry Warwick

Henry Warwick Braithwaite (1896–1971) was born in Dunedin and educated at Selwyn Collegiate School there, before training at the Royal Academy of Music in London. During an outstanding career in Britain, he conducted the Sadlers Wells Opera (1932–40 and 1960–68), the Covent Garden Opera (1949–53), and the Welsh (1956–60) and Scottish (1943–46) National Orchestras. He also conducted ballet, symphony and opera in Germany, France and Italy; and in 1947–48 and again in 1953–55 spent periods as resident conductor with the Australian Broadcasting Commission Orchestra and the NZ National Orchestra.

BRAKE, John Brian

John Brian Brake (1927–88), a freelance photographer with a worldwide reputation, was born in Wellington, educated at Christchurch Boys' High School, and worked as a cameraman and director with the National Film Unit (1949–54). Brake worked as a freelance photographer in Europe, the US, the Middle East and South-East Asia for magazines and books (*Life*, *Paris-Match*, *National Geographic*, *Horizon*) and directed films for the Time-Life corporation. He was awarded the Order of Merit by the United Arab Republic, and won many professional honours, including the Award of Merit from the American Society of Magazine Photographers. Among his books are *NZ: Gift of the Sea*, *Peking, a Tale of Three Cities*, *The Sculpture of Thailand* and *Monsoon Essay*, photographed over a five-month period in India in 1960.

BRAME, William Rawson

William Rawson Brame (1833–63) was the founder of the non-conformist settlement at Port Albert in North Auckland, the members of which became known as Albertlanders. He had begun to prepare for the Baptist ministry in his father's footsteps as a young man, but health problems led to his apprenticeship to a publisher in Birmingham. He edited a newspaper in the city, then became a foreign correspondent of several English newspapers in Belgium. He wrote a novel, *The Last of the Czars*. He was disappointed by the initial setbacks at Oruawharo, where Port Albert was sited, and died in Auckland in March 1863.

BRANGUS

Brangus is a breed of beef cattle fixed from a cross between the Asian Brahman (3/8) and the Scottish Angus (5/8) in the southern States of the US about the time of World War One. The solid black, polled animal has been present in NZ herds since the early 1970s when they were brought in from West Australia by an American cattleman, David Canning, owner of Koiro Station at Taumarunui. The Brangus was designed to combine the tick-resistant, heat-tolerant qualities of the Brahman with the early maturing and compactness of the Angus which thrives in temperate and cooler climates. The result is said to be a specially hardy animal that does better in desert or semi-desert country than either parent breed.

BRASCH, Charles Orwell

Charles Orwell Brasch (1909–73) was a poet and editor whose taste and opinion had a pervasive influence on NZ literature during the two decades following World War Two. Brasch was born in Dunedin and educated at Waitaki Boys' High School and St John's College, Oxford (where he read modern history). He travelled widely through Europe, worked as an archaeologist in Egypt, then as a teacher at a school for problem children in England and as a civil servant during World War Two in England. He returned to NZ in 1947 and edited the literary journal, *Landfall*, from 1947 to 1966. He wrote poetry all his life, with five collections published, and an autobiography (from 1909 to 1947) was published in 1980. During his editorship of *Landfall*, Brasch's advice, encouragement and high standards left their mark on the development of a whole generation of NZ writers.

BRASS BANDS

```

}
```

Brass bands from NZ established themselves as among the best in the world with consistent winning performances at world championships. Bands have had a solid following in this country since the earliest days of European settlement. They grew from a military tradition. The British regiments or marines units provided the music for ceremonial occasions in the colony and the gap left behind when they went was filled by bands associated with the local militia and volunteer units — the Dunedin Engineers' Band, Dunedin City Guards, Wellington Garrison, Timaru Artillery and others.

The band of the Taranaki Volunteer Rifles formed at New Plymouth in 1859 is believed to have been the first in the country, followed by the Auckland Artillery Band five years later and the Petone Band which started up about the same time.

Gradually the support changed from military units to municipalities as towns felt the need for music on special occasions to bolster civic pride. From the 1880s through until after World War Two, almost every town in NZ had its municipal band, and some of the larger towns had more than one.

The first national brass bands championship was held at Christchurch in 1880 among six bands. It was won by the Invercargill Garrison Band and over the following ten years the national contest was won twice more by Invercargill Garrison and five times by the Oamaru Garrison Band. National competitions have been held regularly since but for a number of years they were organised by different groups in the North and South Islands.

The NZ Brass Bands Association was formed in 1931. Bands which have dominated national championships this century at different periods, chronologically, include: Wellington and Wanganui Garrison bands, Woolston, St Kilda, Kaikorai, Skellerup and Continental. The last two are examples of the modern trend towards naming the bands after their major commercial sponsors.

In 1903 a national band from NZ, called the Hinemoa Band, toured Britain and was popularly received. The National Band of NZ of 1953 was extraordinarily successful during the tour of Britain, winning competitions in England and Scotland and earning a reputation as a very strong musical combination.

In 1978 a National Band of NZ once more travelled overseas to record great success at the world championships held every four years at Kerkrade, The Netherlands, winning three gold medals with fine performances. The following world championship was held in 1981, brought forward to avoid clashing with soccer's World Cup. The NZ champion band, Continental Airlines Auckland Brass, also won three gold medals, again scoring high in the show march, the music and the march. In July 1985, a National Band of NZ again won three gold medals at

Kerkrade.

NZ's A grade bands, youth bands or Salvation Army bands in the last decade have visited Britain and Europe, the US, Canada, Japan and Australia a number of times.

BRATHWAITE, Errol Freeman

Errol Freeman Brathwaite (1924–), a novelist and freelance journalist, was born at Clive in Hawke's Bay, educated at Waipukurau and Timaru, and worked as a NZ Railways clerical cadet until World War Two. He served with the army, and then with the RNZAF and the NZ Corps of Signals until 1959 when he became an advertising copywriter and later an agency creative director. Brathwaite's fiction includes *Fear in the Night* (1959), *An Affair of Men* (1961), *Long Way Home* (1964), and a trilogy on the 19th century wars in Taranaki: *The Flying Fish* (1964), *The Needle's Eye* (1965) and *The Evil Day* (1967).

BREES, Samuel Charles

```
{ewc
MVIMG,
MVIMAGE,
[HOTMACR
O=MVJump(
"B1340PG",
TOPIC")]!
b1340pas.dib
}
```

Samuel Charles Brees (1810–65) was trained as an engineer and surveyor in London, was appointed to succeed Captain W M Smith as principal surveyor to the NZ Company, and arrived in Wellington in 1842. He traced the route from Wellington into the Wairarapa and made some of the best-known maps of Wellington in its early years, including one of the town in 1843, and another of its public reserves in 1844. He is best remembered, however, for his sketches and watercolours which give a detailed topographical depiction of early settlements. After his three-year contract expired, Brees returned to London. The Alexander Turnbull Library holds 34 of his works. A number of his sketches of NZ scenery were published in 1847 in a large portfolio entitled *Pictorial NZ*.

BRETHREN

Brethren assemblies have been held in NZ since the 1850s. The movement is now represented predominantly by three groups — Open Brethren, Exclusive Brethren and Reading (or Stuart) Brethren. The movement began with a Dublin group within the Anglican Church of Ireland, including some clergymen, who wanted to share the Eucharist with other Protestants but felt confined within their spiritually flat church. What evolved in Dublin and quite quickly in other places in the British Isles was a church group which claimed to base its government and practices more firmly on the principles enunciated in the *Bible* and which considered that all believers should share in the priesthood. The result is congregations without clergy and services in which taking part is emphasised rather than leading the flock. Pastoral responsibilities, including the teaching function, are undertaken by the men of the church.

The first split among the Brethren Church occurred in 1848 in England when the Exclusive Brethren broke away. Although the Exclusive Brethren were then the majority of the congregations, the Open Brethren now outnumber the Exclusives in NZ as in most other places.

One of the prominent early members of the Open Brethren was an internationally known hymn writer, James George Deck, a former Indian Army officer who retired to Motueka. In the 1870s, the Exclusive Brethren in England sent one of their most persuasive members to this country to explain the rift that had occurred and the result was that some congregations here changed into Exclusive Brethren. Although Deck went Exclusive most congregations here remained Open.

The total Brethren membership is just over 20,000. About 250 Open Brethren assemblies have a membership of more than 11,000, but they operate in isolated independence without any regional or national organisations. Baptism is by immersion and the Eucharist is celebrated weekly. There are some fulltime pastors and deacons but no ordained clergy.

A group which split from the Exclusives during last century is known as the Reading Brethren (or Stuart Brethren). There are 14 congregations in NZ with a total membership of about 350, and the sect operates in much the same way as the Open Brethren.

BRETT, Sir Henry

Sir Henry Brett (1842–1927) was an influential and innovative newspaperman and publisher. Born in England, he trained as a printer on newspapers owned by an uncle, came to NZ and within a short time established a reputation in Auckland as an energetic and skilled reporter. He became part-owner of the *Auckland Star* in 1870, and sole proprietor in 1876. He published annually for many years the *Auckland Almanac*, *The Colonists' Guide*, the *Gardening Guide* and the *South Pacific Pilot*; and such historical works as *White Wings* and *The Albertlanders*. Brett was politically a supporter of Liberals Ballance and Seddon, and was mayor of Auckland in 1878. He pursued musical and horticultural interests with energy and enthusiasm.

BRIDLE PATH

```

Bridle path is the track across the Cashmere Hills taken by the Canterbury Pilgrims who arrived at Lyttelton (then Port Cooper) in December 1850 in the ships *Randolf*, *Charlotte Jane*, *Sir George Seymour* and *Cressy*. The settlement at Christchurch, on the plain behind the hills, was to be their home. The Lyttelton Road Tunnel now runs through the hills under the Bridle Path.

BRIERLEY, Sir Ronald Alfred

Sir Ronald Alfred Brierley (1937–) founded Brierley Investments Ltd (in 1961 as R A Brierley Investments Ltd) while still in his twenties. He was a maverick figure in the highly regulated NZ financial sector, buying companies whose true value was not represented by share price and then stripping the assets. By the 1970s, he was a major force in NZ business, but still not of the establishment, and his business practices were once criticised by the Prime Minister of the time, Sir Robert Muldoon.

Brierley Investments became a dominant shareholder in many blue chip NZ companies, including, first, Ansett NZ, and then, Air NZ, as well as the Whitcoulls printing and retailing chain, and Magnum, a brewing, accommodation and merchandising corporation. The company became a major influence in Australia and pursued interests in the US, Britain and Asia. Brierley became founder president of the company in 1990 and withdrew from direct involvement. Since then he has taken a controlling interest in Guinness Peat, an investment company based in London but active in Australia and NZ, and listed in all three countries.

His abiding interest outside business is cricket.

BRILL

Brill (*Colistium guntheri*) is an oval flatfish between 25 and 40 cm long, a brownish grey colour with fine longitudinal black lines. It is distinguished by a short rostral hook on the upper jaw that partly covers the mouth. Brill is most commonly found on sand and mud sea bottoms, particularly in the south of the country, in depths down to 100 m, where it is caught by trawlers in limited numbers as a by-catch.

BRITANNIA

Britannia was the original name for the site on which Petone stands today. Early in 1840 the first NZ Company settlement in Port Nicholson was sited at Petone, then called Britannia, but exposure to the brisk winds that whistle across the flat land at the foot of the Hutt Valley persuaded the settlers to have a site against the hills a few miles to the south-west surveyed for settlement. A severe flood removed any doubts and although Petone has remained an important suburban township and industrial area, the main settlement was moved to the present site of Wellington.

Britannia Heights is a residential suburb of the city of Nelson.

BROADBILLED SWORDFISH

Broadbilled swordfish (*Xiphias gladius*) is a distinctive ocean-ranging fish with a snout extended forward to form a long, broad sword about 25 per cent of its total length, which may exceed 5 m. It weighs up to 650 kg. Highly prized as a game fish, the broadbilled swordfish occurs in tropical and temperate waters and can be occasionally encountered off any part of the NZ coast. It is an aggressive predator and, like the marlins, makes impressive leaps into the air when hooked. It is distinct from other fish in having no pelvic fins. In colour it is dark blue with a bronze sheen on the back, silver-grey belly and dark grey fins.

BROADCASTING

(see Radio, Television)

BRODIE, John

John Brodie (1905–55), a journalist and author, wrote seven novels under the pen-name John Guthrie. Born in Paeroa, educated at Thames High School, New Plymouth Boys' High School and Canterbury University College, he was a rugby blue, played cricket for Taranaki and worked as a journalist in NZ from 1927 until he went to England in 1938.

His novels are *The Little Country* (1935), *So They Began* (1936), *Journey Into Twilight* (1949), *Is This What I Wanted?* and *Merry-go-Round* (1950), *Paradise Bay* and *The Seekers* (1952). *The Little Country* is a breezy satirical novel and, according to critic Joan Stevens, the only work that will hold him any place in our literature. *The Seekers* was made into a film by a British production company during the 1950s.

BRONZE BEETLE

Bronze beetle (*Eucolaspis brunneus*), a common native, has become an orchard pest, expanding its food base to include the foliage of almost all exotics and to berryfruit and pip fruit. Its natural food is the foliage of native trees, but has adapted to other plants and exploded in numbers, ravaging gardens and orchards in its millions. During each spring and early summer, the bronze beetle's presence becomes obvious as it riddles foliage, sometimes leaping about from leaf to leaf.

It is mostly dark brown to black, although sometimes has a yellowish tone, and is about 5 mm long. Through to the autumn, the females lay clusters of cream-coloured eggs in the ground in tiny earth capsules. After hatching, the larvae live in the ground on fine roots and during the winter enclose themselves in earthen cells where they pupate in the spring.

Broom can be attractive in flower and several species are grown as ornamentals in home gardens. The native brooms are shrubs or small trees mostly in the genus *Carmichaelia* with a few species of *Notospartium*, *Chrodospartium* and *Corallospartium*.

Like most northern hemisphere brooms, they are usually leafless when adults with more or less flattened branches which are green and conduct the photosynthesis process in place of leaves. The flowers, though tiny in most species, are similar in shape to those of the pea because the brooms belong to the pea family Papilionaceae. The fruit is similar to a small pod but usually sheds its walls leaving yellow, orange or black seeds suspended on the remnants. The flowers are usually white flushed or striped with purple but in a few species may be pink (*Notospartium carmichaeliae*) or perhaps pale lemon (*Carmichaelia williamsii*). They usually flower in spring and fruit in summer.

Most species are from the South Island and only one species of *Carmichaelia* is found outside NZ (on Lord Howe Island).

Alfred Nesbitt Brown (1803–84) was born in England, trained at the Church Missionary Society's school at Islington, and was ordained an Anglican priest in 1828. He arrived at Paihia in 1829, and was the third ordained minister in NZ, where he spent his remaining 55 years working. In 1833 Brown was a member of a party of missionaries that visited Te Waharoa, deep in the Waikato, and the following year he and James Hamlin spent five months walking through the Thames Valley/Waikato region before establishing a mission station at Matamata. His work was disrupted by inter-tribal wars, and he abandoned the station to set up another at Tauranga. But it was nearly ten years before the tribal battles were quelled and peaceful periods became regular. He rejected any advancement and stayed on in the Tauranga region, declaring his ambition 'to live and die a humble missionary'. He was a rigid man who made few friends, but he had integrity and courage.

BROWN, Charles Armitage

Charles Armitage Brown (1786–1842), a close friend of the poet John Keats and an associate of Lord Byron, emigrated to NZ in 1841. He died following a stroke after less than a year in the colony. His son, Charles Brown (1820–1901), also emigrated to NZ in 1841 and settled in New Plymouth. He became the first Superintendent of Taranaki, and was a prominent Member of Parliament for a number of years. The father took the name Armitage when publishing some of his papers about Keats in England; he had spent most of 1818 and 1819 in Keats's company. He later wrote a life of Keats but it was rejected by publishers. He collected a large number of his friend's papers and, with his own notes, this made an exhaustive supply of documentation for future Keats biographers.

BROWN, Donald Forrester

Donald Forrester Brown (1890–1916), a sergeant in the 2nd Otago Battalion of the NZ Division, won the Victoria Cross during the Somme Battle in World War One, on 15 September 1916, and died in action a fortnight later. He was born in Dunedin, educated at Waitaki Boys' High School, and was a farmer before he went to the war.

BROWN, Ross Handley

Ross Handley Brown (1934–) was the most recent All Black in a famous Taranaki rugby family. He was the son of Handley Welbourne Brown (1904–73) who represented NZ 20 times from 1924 to 1926 as a centre three-quarter, and the nephew of Henry MacKay Brown (1910–65) who played eight matches for NZ in 1935 and 1936. Ross Brown played 25 matches for the All Blacks from 1955 to 1962 as a five-eighth and centre. When he retired from rugby in 1968, he had played 207 first-class matches since he first represented Taranaki as an 18-year-old.

```

Brown creeper (*Finschia novaeseelandiae*) belongs to the very large family of warblers (Sylviidae) which has a number of subfamilies spread throughout the world. All are insectivorous and the majority have a musical and often powerful song. The brown creeper, slightly smaller than a sparrow at 13 cm, is mainly brown, as its name suggests, with a reddish brown forehead, back and tail, a grey patch on the back of the head extending on to the face, dark brown wings and a cinnamon brown throat and underparts. Its bill and feet are pale brown and dark brown spots on the tail form a band when it is spread.

This NZ song bird is confined to the South Island, Stewart Island and some neighbouring islands where it is fairly common in native bush and adjacent exotic pine plantations, but it is relatively little known because it is so inconspicuous.

The brown creeper is gregarious and moves around in small flocks but, like its relative the yellow-head, is more often heard than seen. Breeding is from October to January. The nest is a neat cup woven from grass, fibres, moss, spiders' webs and is lined with feathers. It is well concealed in trees or shrubs up to 9 m from the ground. The three to four eggs range from pink with brown spots to white with purplish spots. Incubation takes about 17 days and is done entirely by the hen who is fed by the male during her sitting.

BROWNE, Sir Thomas Gore

Sir Thomas Gore Browne (1807–87) was born in England to a prominent family and served with the British Army in Afghanistan. He retired in 1851 to become Governor of St Helena, and in 1854 was appointed to succeed Sir George Grey as Governor of NZ, taking up the post at the end of 1855. He was succeeded by Grey six years later after a term during which he showed himself to be a sociable idealistic man but unable to understand or sympathise with Maori cultural attitudes, especially towards authority and land tenure.

His handling of Maori affairs gave a stronger inevitability to the drift towards war in the late 1850s. He took a stance against Wiremu Kingi over the sale of the Waitara Block in Taranaki. He was clearly in the wrong but he would not modify his attitude, and was always antagonistic towards the King movement.

Following his term of office in NZ he became governor of South Australia and then temporary administrator of Bermuda. (See Gore.)

Brownlie brothers, Cyril James (1895–1954), Maurice John (1897–1957), and Jack Laurence (1899–1972), all rugby forwards, comprised the most famous All Black family in NZ rugby history. The youngest, Jack, was born in southern Hawke's Bay, educated at Sacred Heart College, Auckland, and St Patrick's College, Wellington, and was the first of the three to represent the country, playing one match against New South Wales in 1921. A knee injury forced the end of his first-class career in his first first-class season.

Maurice was born in Wanganui, and also educated at Sacred Heart and St Patrick's, and played throughout his first-class career for Hawke's Bay (1921–30 inclusive), as a member of the most brilliant Ranfurly Shield team of the period before World War Two. He played 61 matches for NZ, eight of them tests, between 1922 and 1928, scoring 21 tries for this country. He is still regarded as one of the game's greatest flank forwards.

Cyril was born in Wanganui, educated at Sacred Heart, played for Hawke's Bay from 1922 to 1930 and represented NZ in 31 matches (three internationals) between 1924 and 1928, scoring 11 tries. During a test against England in 1925, as a member of the famous 'Invincibles', he became the first player to be ordered off in an international.

All three brothers were farmers.

BRUCELLOSIS

Brucellosis, also known as contagious abortion, has been a problem among cattle in NZ, but a determined eradication campaign has been successful in most districts. A central brucellosis laboratory services the national brucellosis scheme. The *Brucella abortus* bacteria infect the womb and placenta, and the calf may be aborted, or may be born weak after the eighth month and will often die. The disease can be transmitted by aborted calves, the afterbirth, by discharges and through milk, dirty hands and unsterilised equipment. Undulant fever in humans is caused by the same bacteria.

Brunner, a locality 13 km east of Greymouth, formerly known as Brunnerton and declared a borough in 1887, is near where Thomas Brunner discovered a coal seam in January 1848. The Brunner coalmine was the scene of the worst mine disaster in NZ history. On 26 March 1896, 67 men were killed by an explosion and a release of gas, following the negligent and unauthorised firing of a shot in a disused section of the mine where no work should have been in progress.

```

Thomas Brunner (1821–74), one of the most intrepid explorers in the early days of NZ settlement, was born in England and came to this country as a survey assistant with the NZ Company on the *Whitby*, arriving at Nelson with Captain Wakefield in October 1841. He made two journeys of exploration — one with William Fox and Charles Heaphy, and a second with Heaphy — and then in December 1846 set out with two Maori guides and their wives to find the source of the Buller River and trace it to the sea. Hunger drove him to eat his dog before the party could reach a Maori settlement at Arahura where they wintered. Subsisting on fernroot and walking barefoot, just like his Maori companions, Brunner sought a pass across the Southern Alps north of the Grey River. He arrived back near Nelson on 15 June 1848, 560 days after his departure, and long after he had been presumed dead. He had traced the Grey and Buller Rivers from source to mouth, and the Inangahua from its source to its junction with the Buller and discovered the presence of coal. During the last few weeks of his journey, he lost the use almost entirely of one leg. The Maori abandoned him — except for the compassionate, Kehu, who remained and enabled them to continue to live off the land, snaring birds and gathering other Maori food.

After a period of unemployment, Brunner became a government surveyor, then Chief Surveyor for Nelson Province, and later Nelson's Commissioner of Public Works.

Lake Brunner, the largest lake in Westland with an area of 41 km², flows into the Arnold River which in turn flows into the Grey River. It is named after the explorer, as is the **Brunner Range** in Buller, which contains Mt Pelion (1,502 m), Mt Wynn (1,413 m) and Mt Curtis (1,402 m).

BRYCE, John

(see A C H Gordon)

BRYDONE, Thomas

Thomas Brydone (1837–1904) was a major figure in the NZ farming industry during the last quarter of the 19th century. He was born in Peeblesshire, Scotland, educated at the Perth Academy and was involved with land development schemes in Scotland and England before emigrating to NZ as superintendent of the Australia and NZ Land Company, in 1868, based at Totara, near Oamaru. Brydone formed an association with William Saltau Davidson, manager of The Levels station, where Timaru was later built. After The Levels was absorbed by the Australia and NZ Land Company, Davidson became general manager in Edinburgh and Brydone the manager of the whole company operation in NZ, organising the first shipment of frozen meat to England in 1882, aboard the SS *Dunedin*. It was his foresight and imagination that led to the establishment of this country's first commercial dairy factory at Edendale on the company's land in Southland. He also pioneered the use of artificial fertilisers and became celebrated in Otago as an outstanding agricultural leader and innovator.

BRYOPHYTE

b1580pas.dib
}
```

Bryophyte is a general term for the most primitive of the higher plants (above the algae). They are generally regarded as lacking a vascular (transport) system and have specialised in a different direction from that of the next higher group, the ferns and their allies. There are three subdivisions — mosses, liverworts and hornworts, although the last is a small group which is usually lumped in with the liverworts. NZ has about 1,000 bryophytes, five times as many as our ferns. As well as being unusual in having about as many liverworts as mosses, we have an unusually high number of primitive and interesting forms.

Bryophytes are commonest and best developed in moist, cool sites but some species are happy as epiphytes — living on the trunks and branches of trees even in exposed places. In form they range from creeping threads to flattened plates (thalloid liver-worts) but most have two or three, or even more, rows of leaves and may form pendent strands, cushions, clumps or even miniature palm-like umbrellas on the forest floor.

Unlike ferns and higher plants, the green leafy plant body is here the gametophyte generation (*see also* Ferns, Vegetation), and the sporophyte (equivalent to the fern plant) is only the small, simple spore-bearing capsule with its supporting stalk and foot. This reversal of roles makes direct comparisons between ferns and bryophytes difficult. The vegetative features being compared belong to different phases of the life cycle.

BUCHAN, Alexander

Alexander Buchan was one of two commissioned artists who sailed with Cook in the *Endeavour*. The other was Sydney Parkinson. Buchan was to make drawings and paintings of Pacific scenery and of the natives for naturalist Joseph Banks. An epileptic, he died in Tahiti.

John Buchanan (1819–98) trained as a pattern designer at a print and dye works in Scotland before migrating to Dunedin in 1849. An avid botanist, he was involved in the exploration of the province of Otago. He published a book on the indigenous grasses of NZ in 1880, was a founder of the NZ Institute, and sent large numbers of dried botanical specimens from NZ to the Royal Botanic Gardens, Kew. But Buchanan is best remembered for one work only, a painting called 'Milford Sound, Looking North West from Fresh Water Basin', described by Gil Docking in his *Two Hundred Years of NZ Painting* as 'An early masterpiece in NZ landscape painting. In this instance, the artist has seized on the huge rhythms of the same series of mountains and has composed a symphony in line and tone.'

BUCK, Sir Peter Henry

```

b1610pas.dib
}
```

Sir Peter Henry Buck (Te Rangi Hiroa) (c. 1880 –1951) was an athlete, physician, administrator, politician, soldier, and an anthropologist who established an international reputation as an expert on Polynesia. Although Buck claimed he was born in 1880, there has been some dispute among historians, and it is widely believed that his real birthdate was 1877. He was born at Urenui, the son of William Henry Buck of Irish extraction, and Rina of the Ngati Mutunga people of Taranaki. His mother died when he was young and Peter was raised by Ngarongokitua, his mother's cousin, and his great aunt Kapuakore. During his teens, Buck took the name Te Rangi Hiroa which he used as an alternative name all his life, most frequently in association with his scientific publications later in his career.

He was educated at Urenui Primary School, Te Aute College and Otago University where he graduated as a physician with his MB and ChB in 1904. By then he had established a reputation as an athlete, winning the national long jump title in 1900 and again in 1904. He married Margaret Wilson of Milton, Otago, in 1905.

Between 1905 and 1908, Buck was Medical Officer for Maori Health with the Health Department, and in 1909 won the Northern Maori electorate, staying in Parliament in this seat until 1914. He was a member of the Executive Council (representing the Maori race) for a short period during 1912. After resigning the Northern Maori seat in 1914, Buck narrowly missed winning a European electorate. He went overseas in 1914 with the NZ forces as medical officer to the First Maori Contingent, serving in Egypt and Gallipoli during 1914 and 1915. Following his transfer to the infantry, he became second-in-command of the NZ Pioneer Battalion during 1916 and 1917. In 1918 he rejoined the medical staff and on his return to NZ resumed his career as Medical Officer for Maori Health, becoming Director of the Division of Maori Hygiene in the Department of Health between 1919 and 1927.

Buck's interest in anthropology, and especially Polynesian anthropology, had been developing since before World War One and, during the long sea voyage home with the Pioneer Battalion, he took the opportunity to measure the physical characteristics of each Maori soldier under his command, compiling a work on the physical anthropology of the Maori published in 1922. Following a number of scientific papers published in the 1920s, of relevance to Maori anthropology, he accepted appointment at the Bishop Museum in Honolulu as a fulltime ethnologist, and by 1936 had achieved eminence in the new field. He was a Professor of Anthropology at Yale University, became Director and later President of the Board of Trustees of the Bishop Museum and had awards showered on him from around the world, including honorary degrees from the universities of Yale, NZ, Rochester, Hawaii, and honorary memberships and fellowships of a large number of scientific organisations around the world.

His work includes *Vikings of the Sunrise* (1938), *Anthropology and Religion* (1939) and *The Coming of the Maori* (1949), more than 60 articles, and 11 major scientific monographs: *The Evolution of Maori Clothing* (1926), *The Material Culture of the Cook Islands* (1927), *Samoan Material Culture* (1930), *Ethnology of Manahiki and Rakahanga* and *Ethnology of Tongareva* (both in 1932), *Ethnology of Mangareva and Mangaian Society* (1934), *Arts and Crafts of the Cook Islands* (1944), *Introduction to Polynesian Anthropology* (1945), *Material Culture of Kapingamarangi* (1950) and *Arts and Crafts of Hawaii* (1957).

Buck was the leading anthropologist and ethnologist of his period on the subject of Polynesia. He was a man of charm, sincerity, industry and exercised a scientific correctness that was mainly self-taught. He died in Honolulu in 1951, after 25 years living outside NZ, but his ashes were brought back to NZ and placed in a vault under a symbolic Polynesian canoe prow at Okoki (near Urenui) in Taranaki.

BUCKMAN, Rosina

```

Rosina Buckman (1881–1948) was the first NZ-born operatic singer to gain an international reputation. She was born at Blenheim and educated at Palmerston North and at the Birmingham School of Music. Her distinguished career as an operatic soprano, and later as Professor of Singing at the Royal Academy of Music in London, began in NZ in 1905 with her performance in Alfred Hill's *A Moorish Maid*. She toured Australia with the J C Williamson Light Opera Company and the Melba Opera Company, and then she was called to Covent Garden in 1914 to make her English debut in *La Boheme*. The following year she was acclaimed for her *Madame Butterfly* and from 1915 to 1918 featured as leading soprano with the Beecham Opera Company.

Further seasons at Covent Garden in 1919 and 1920 were followed by a world concert tour in 1922–23. Her husband, Maurice d'Oisley, was also a professor at the Royal Academy of Music and they lived quietly together after their retirement. She is buried in St Marylebone cemetery in London.

BUDDLE, Thomas

Thomas Buddle (1812–83) was one of the earliest Wesleyan missionaries to arrive in NZ, and he established a reputation as an expert in Maori language and customs. He was born, educated and ordained in England and arrived at Hokianga in May 1840. He spent four years in the central North Island region converting Maori to Christianity and establishing schools, before his appointment as head of the Wesleyan Native Training School in Auckland at which native teachers were educated for service in mission schools. His knowledge of Maori was such that he was consulted both by William Williams for translation work on the *Bible*, and by Sir George Grey during the writing of Grey's work on Maori mythology, but he wrote only one work of substance himself, *The Maori King Movement*. This was a description of the Waikato movement that began in the 1850s. He was president of the Australasian Wesleyan Conference in 1861, and of the first NZ conference in 1874.

BUICK, Thomas Lindsay

Thomas Lindsay Buick (1866–1938) was a politician, journalist and historian, whose most important contribution to NZ culture was his book, *The Treaty of Waitangi* (1914). He was born and educated at Oamaru, trained as a carpenter, and first gained public prominence as a lecturer on behalf of home rule for Ireland and as an advocate of the temperance cause. He entered Parliament in 1890 as a radical, who allied himself to the Liberal Party for whom he became Whip after the 1893 election. His outspoken independence cost him his seat for Wairau in 1896, and he turned his interest to journalism. He bought a share in the *Manawatu Standard* just before the turn of the century, then moved on to the *Dannevirke Advocate* in 1903 where he stayed until 1911 when he went to England for a visit. He joined the United Press Association as parliamentary reporter on his return, a job he held until he retired in 1933.

His first historical work was *Old Marlborough* (1900), followed by *Old Manawatu* (1903) and *An Old NZer* (1911), a biography of Te Rauparaha. Following the publication of *The Treaty of Waitangi*, he published *NZ's First War* (1926), *The French at Akaroa* (1928) and *Waitangi 94 Years After* (1934). He was given a research appointment at the Alexander Turnbull Library following his retirement, and was the first chairman of the National Historical Committee established by the government to organise the celebration of the national centennial in 1940.

He died, however, at the beginning of 1938, leaving £12,000 to the National Art Gallery and £1,000 to the Hocken Library in Dunedin.

BUILDING SOCIETIES

Building societies originated in Britain in the last quarter of the 18th century as the industrial revolution pulled more and more people into the northern cities. The first 'terminating' societies grew out of the friendly societies movement, with say, 20 members pooling regular savings for the purpose of building homes, balloting for priority as funds became available for construction or purchase of a house, and then winding up after the last member had been catered for. There were many variations on this simple theme.

Building societies came to NZ early, opening during the 1860s in settlements such as Dunedin, Lyttelton, Nelson, New Plymouth, Napier and Thames. They were mainly 'permanent' societies. Terminating societies gained favour in NZ from the turn of the century, even though balloting for loans had been outlawed in Britain in the 1890s. These societies reached their peak in the 1950s and 1960s, but under the Building Societies Amendment Act 1980, terminating societies in NZ were prevented from taking new members from 31 March 1981. This accelerated the growth of permanent societies which had burgeoned during the 1970s as a result of a stated government policy to shift more of the financing of private homes away from government sources to the private sector.

Permanent societies operated more like savings banks with depositors buying 'shares' to accentuate the co-operative nature of the institutions. After the end of the terminating societies, permanent societies became heavily involved in marketing variations on these savings schemes. By the mid-1980s, there were about 50 building societies in the country with about 500,000 members and total assets approaching a billion dollars. The deregulation of the financial sector since 1985 has seen the demise of the building society, with the two biggest at that time, Countrywide and United, registering as banks.

BULLER

```

Buller is the region on the West Coast of the South Island that stretches from the Karamea Bight in the north to the southern boundaries of the old Buller and Inangahua Counties. It takes its name from the Buller River which rises from Lake Rotoiti and flows into the Tasman Sea at Westport, about 170 km away. For 75 km, it runs through the Buller Gorge. The river was named after English MP, Charles Buller, a director of the NZ Company and a friend of Edward Gibbon Wakefield. And the gorge and locality took their name from the river.

BULLER, James

James Buller (1812–84) was an indefatigable Wesleyan missionary who arrived in Hokianga in 1836, mastered the Maori language and during the following 40 years worked in most parts of the country, demonstrating extraordinary stamina and administrative ability. On hearing of the arrival of the NZ Company settlers at Port Nicholson in 1840, he travelled to the area to select a site for a mission. He ministered to Wesleyans in Wellington, the Wairarapa, Wanganui, Christchurch, Timaru and Thames, setting up church organisations during the West Coast and Coromandel gold rushes. During the late 1870s he returned to Britain to lecture on missionary work in NZ and to publish his book, *Forty Years in NZ*. He settled in Christchurch in 1881.

BULLER, Sir Walter Lawry

```
{ewc
MVIMG,
MVIMAGE,

"B1680PG",
TOPIC")]!
b1680pas.dib
}
```

Sir Walter Lawry Buller (1838–1906) was born in NZ, the son of missionary James Buller, and was one of the most distinguished men of his time as ornithologist, author, linguist, soldier, civil servant and businessman. His enduring memorial is the body of work on NZ birds: *The History of the Birds of NZ* (London, 1873); *Manual of the Birds of NZ* (1882); the two-volume masterpiece, *The Birds of NZ* (1888); and the two-volume *Supplement to the Birds of NZ* (1905).

Buller was educated at Wesley College, Auckland, where he first developed his lifelong interest in natural history. He worked for the Union Bank in Auckland for several years before moving to Wellington where he first became noted for his literary, scientific and linguistic ability. He became fluent in Maori, was appointed an interpreter to the Wellington Magistrate's Court, became Native Commissioner for the southern provinces, edited a weekly Maori language newspaper, *Te Karere o Ponēke*, then became first editor of the bilingual *Maori Messenger* and its successor, *The Maori Intelligencer (Te Manuhiri Tuarangi)*. He became a Native Land Court Judge.

While Buller was in London during the early 1870s, acting as secretary to the Agent-General for NZ, Dr I E Featherston, and preparing his first book for publication, he qualified for the Bar at the Inner Temple and, on returning to Wellington, established a legal practice mainly concerning the Native Land Court.

Buller was an extraordinarily able and energetic man whose remarkable achievements were marked during his lifetime by many honours, including membership of the Royal Society and honorary degrees from scientific institutions in Europe. But there were several scandals associated with his business affairs, including the collection of bird skins from round the country, the lending of money at exorbitant interest rates and the conduct of his legal practice. He made a large fortune but, despite his allegedly ruthless self-interest, left his country a remarkable heritage contained in our most famous books.

Bulls, a Rangitikei township 31 km north-west of Palmerston North and 14 km south of Marion, is the oldest settlement in the northern Manawatu area. It was first settled by an English craftsman James Bull, who became a shopkeeper and hotelkeeper. It was first known as Bull Town but later 'Bulls' became common currency. It is the centre of a horticultural, sheep-rearing and dairying area and is jokingly referred to as 'the only place in the world where you can get milk from Bulls'. It is not well known that James Bull was a wood carver of such distinction that he did some of the panelling in the House of Commons in London before emigrating to NZ.

BUNBURY, Lieutenant-Colonel Thomas

Lieutenant-Colonel Thomas Bunbury (1791–1862) was born into a military family at Gibraltar, and served in a number of European campaigns until his transfer to Australia in 1837. When the New South Wales Governor, Sir George Gipps, became alarmed at reports of William Hobson's ill-health, he sent Bunbury to take over the government of NZ if necessary. However, Hobson was recovering when Bunbury arrived, and he had already sent several men into various parts of NZ to collect further signatures for the Treaty of Waitangi. He asked Bunbury to take the treaty for signature to certain centres, most notably the South Island. Bunbury proclaimed the Queen's sovereignty at Stewart Island in early June by right of Cook's discovery, but later in June he formally took possession of the South Island on the grounds of its cession by Maori chiefs.

In 1844 Bunbury sailed for India with his regiment and, after returning to England, wrote a lively account of his life, called *Reminiscences*, in which he included shrewd observations on his NZ stay.

BURCHFIELD, Robert William

Robert William Burchfield (1923–) was, before his retirement, perhaps the best-known lexicographer and philologist in England as Chief Editor of the Oxford English Dictionaries and editor of the four-volume *A Supplement to the Oxford English Dictionary*. Burchfield was born in Wanganui and educated at Wanganui Technical College, Victoria University of Wellington and at Oxford. He served with the NZ army in World War Two and represented the army at rugby in Italy in 1946. After a period as a lecturer in English at Victoria University, he was awarded a Rhodes Scholarship in 1949 and has lived and worked at Oxford since. He began work on the editing of *A Supplement to the Oxford English Dictionary* in 1957, became a Fellow of St Peter's College in 1963, and was editor of 'A Supplement of Australian and NZ Words' in *The Pocket Oxford Dictionary* in 1969. In 1977, Burchfield was made an honorary member of the American Academy of Arts and Sciences.

His books include *The Land and People of NZ*, with E M Burchfield, his first wife (1953), *The Oxford Dictionary of English Etymology*, with C T Onions and G W S Friedrichsen (1966) and *The English Language* (1985). He has also contributed scholarly articles to magazines, and chapters to specialist books.

BURDON, Randal Mathews

Randal Mathews Burdon (1896–1965) was a soldier, a high-country sheep farmer and a well-known historian and biographer. He was born in England, emigrated to NZ with his family as a young boy, and was educated at Waihi School, Winchester, and Christ's College, where he was an outstanding athlete. He served throughout World War One in the Queen's Regiment, winning the Military Cross, and rising to the rank of Second Lieutenant. He then served with the Indian Army on the Northwest Frontier for four years following World War One, rising to the rank of Captain.

In 1922 Burdon returned to NZ, established himself as a sheep farmer in South Canterbury, and became interested in history and journalism. His first book was *High Country* (1939), which has become a standard historical work on the development of high country sheep stations in the South Island. This was followed by *NZ Notables* Series I, II and III (1941, 1945, 1950), *Life and Times of Sir Julius Vogel* (1949), *24 Battalion*, an official war history (1953), *King Dick, a Biography of Richard John Seddon* (1955), *Scholar Errant* (1956) and *The New Dominion* (1964).

BURNHAM

```
{ewc
MVIMG,
MVIMAGE,

si_14.dib}
```

Burnham is a farming area 30 km south-west from Christchurch in Central Canterbury, named by pioneer Richard Bethell after his birthplace in England, Burnham Beeches. Scientists from Britain and the US observed the transit of Venus there in 1874. It was the site of the notorious Burnham Industrial School for Boys, among whose more distinguished alumnae was writer and politician John A Lee. Flogging was part of the rehabilitation. It is now the site of a military training establishment.

BURNS, Thomas

Thomas Burns (1796–1871) was born in Mosgiel, Ayrshire, the son of Gilbert Burns, and nephew of the poet, Robert Burns. Thomas became a minister of the established Church of Scotland in 1823 and served the parishes at Ballantrae and in Monkton before throwing in his lot with the breakaway Free Church of Scotland in 1843 and emigrating to Otago aboard the *Philip Laing* with his wife and family in 1848. Burns was officially the minister to the first congregation in ‘New Edinburgh’. His energy and strong personality exercised an enormous influence on the young Dunedin settlement, and the early establishment of the University of Otago was a reflection of his passion for education.

His son, **Arthur John Burns** (1830–1901), after a period as an apprentice seaman, arrived in Dunedin, also aboard the *Philip Laing*, and took up land at Mosgiel. Arthur John Burns was MP for Bruce in 1865–66, for Caversham from 1866 to 1870 and for Roslyn from 1876 to 1878. He founded the Mosgiel Woollen Company and for several years was manager of the Westport Coal Company in Hokitika.

BUSBY, James

James Busby (1800–71) was born in Glasgow and went to New South Wales with his father, John Busby, who was appointed mineral surveyor and civil engineer in the colony. James studied viticulture in France as a very young man and later conducted experiments in wine-making in both New South Wales and NZ. He worked in the civil service in New South Wales but returned to England in 1831. He was appointed Resident in NZ by the British government, and arrived in the Bay of Islands in May 1833. He bought land at Waitangi at his own expense and built a house on the site. This house later became famous for the signing of the treaty with the Maori tribes in 1840. Busby was slightly wounded by Maori marauders in 1834, and because he had no legal means of enforcing law and order he became known among the settlers and the Maori as ‘Man-o’-War Without Guns’. His frequent request to the British government, through the New South Wales government, for increased powers went unheeded and his impotence gained him what many regard as an undeserved reputation for inefficiency.

Spurred on by the arrival of Baron De Thierry, a French immigrant who declared himself to be sovereign chief of NZ, Busby persuaded 35 northern Maori chiefs to sign a declaration of independence creating a confederation of the chiefs and tribes of NZ with exclusive powers of legislation. The British Colonial office acknowledged the declaration, but it soon became obvious that without any substantial backing by the British government the confederation would be ineffectual. Busby’s requests for legal powers as a magistrate and for a police force to back his authority were ignored. Captain William Hobson of the Royal Navy visited NZ in 1837 and proposed that the districts settled by Europeans should be under direct British rule. In face of this impractical suggestion, Busby insisted on supporting his confederation of tribes scheme and was preparing to leave for London to persuade the British government of its worth when he was advised of the appointment of Hobson as consul and lieutenant-governor of NZ. Although disappointed, Busby generously co-operated with Hobson in drafting the Treaty of Waitangi and negotiating its acceptance by the Maori.

After visiting Sydney, Busby returned to settle in NZ. He represented the Bay of Islands in the Auckland Provincial Council between 1853 and 1863. He established a newspaper in Auckland, partly to make a case against what he considered the government’s unjust treatment of land claims made by himself and other settlers; he was awarded over £30,000 in compensation in 1869, but received only £23,000 which helped offset legal costs of nearly £14,000.

Bush is the region of the northern Wairarapa, that area once known as the Forty-Mile Bush, which runs northwards from Mt Bruce near Masterton to the Manawatu Gorge. The dense rain forest, with which the region was covered, also continued to well north of Dannevirke in southern Hawke's Bay, and the overall region was known as the Seventy-Mile Bush. When the rugby union was formed in the northern Wairarapa/southern Hawke's Bay region in 1890, it was to be called 'The Seventy-Mile Bush Rugby Football Union' but, as the Dannevirke club chose to remain in the Hawke's Bay Union, the name was simplified to 'The Bush Union'. The section of the Seventy-Mile Bush from Eketahuna to Norsewood was largely settled in the early 1870s by parties of Scandinavian immigrants.

BUSH LAWYERS

b1770pas.dib
}
```

Bush lawyers are rambler roses of the family Rosaceae and the genus *Rubus*, so-called because the prickly stems grasp at the skin or clothing of anyone venturing too close. The five NZ species and the introduced species (including the blackberry, *R. fruticosus*) thrive in regenerating bush after primary growth has been cut or burnt out. Two major native species are *R. australis* and *R. squarrosus* which appear throughout the country but there are many variations, including intermediate forms or possibly hybrids.

Bush lawyer is also a colloquial term for a person with pretensions towards a knowledge of the law.

BUSH SICKNESS

Bush sickness is a disease caused by a cobalt deficiency in the soil, and affects all ruminant animals but particularly cattle and sheep. It results in anaemia, loss of appetite, general wasting and unthriftiness, and ultimately death. Cobalt deficiency was especially severe in the central plateau region of the North Island and across into the hinterland of Poverty Bay and Hawke's Bay. There were other much smaller pockets in Northland, the west coast of Wellington Province, the north-west coast of the South Island, central Canterbury and in Southland.

Once the cause of bush sickness was established, it was countered by regular applications of cobalt sulphate which resulted in high pastoral productivity across the central North Island plateau which was once left to scrub.

BUSINESS ROUNDTABLE

Business Roundtable, established in 1986 by the chief executives of business corporations, had a powerful influence on the policies of both the Labour government of 1984–90 and the following National administration. The organisation's declared objectives are 'promoting the interest of all NZers concerned with achieving a more prosperous economy and fair society' in the belief that 'In an open and free domestic and international market environment, the interests of the business sector are closely aligned with those of the community at large.' With an annual budget of \$2 million from membership fees, the Roundtable has undertaken a large number of research projects to support its pro-business cause. The organisation had 29 members under the chairmanship of Sir Ronald Trotter of Fletcher Challenge in 1986. Ten years later membership exceeded 60 under the chairmanship of Douglas Myers, of Lion Nathan Ltd.

BUTLER, George Edmund

George Edmund Butler (1870–1936) was born in England, arrived in Wellington in 1881 with his father, and was educated at Te Aro School and the local School of Art under J A Nairn. In 1898 he travelled to Europe where he studied at the Lambeth School of Art, London, at the Académie Julien in Paris, and in Antwerp where he won the Concours Gold Medal. Butler taught art privately in Dunedin in 1903 and 1904 but returned to England to further his career and had many pictures hung in the Royal Academy and in the Royal Scottish Academy. He is best remembered in NZ now for the pictures he made as an official war artist with the NZ Expeditionary Force during World War One.

BUTLER, John Gare

```

John Gare Butler (1781–1841) was the first ordained clergyman to settle in NZ as a missionary and on 3 May 1820 supervised the first ploughing of land in this country, recording it rather pompously with: ‘The agricultural plough was for the first time put into the land of NZ at Kideekidee [Kerikeri], and I felt much pleasure in holding it after a team of six bullocks brought down by the *Dromedary*. I trust that this day will be remembered with gratitude, and its anniversary kept by ages yet unborn. Each heart rejoiced in this auspicious day, and said, “May God speed the plough”.’

Butler was born in London and worked as a clerk until his ordination in 1818 in preparation for his missionary service as the church superintendent in NZ. He arrived in the Bay of Islands in 1819, accompanied by the Reverend Samuel Marsden whom he had joined in Port Jackson, New South Wales. The Butlers lived in what is now known as Kemp House, named after James Kemp, who, with his wife, had travelled from London with the Butlers as a lay missionary. Kemp House is the oldest surviving European building in NZ.

Butler was a difficult man to deal with and progressively fell out with fellow missionary Thomas Kendall, Maori chief Hongi Hika and finally Samuel Marsden himself. He was finally withdrawn from the settlement in 1823, following a charge of drunkenness which was almost certainly trumped up, and he returned to Britain. He came back to NZ in 1840, becoming a clergyman and Maori welfare agent at Petone until his death a year later.

BUTLER, Samuel

```

Samuel Butler (1835–1902), an early settler in Canterbury, was the son of the Reverend Thomas Butler, and a grandson of the Bishop of Lichfield, Dr Samuel Butler, who had been a famous headmaster of Shrewsbury. The young Samuel was educated at Shrewsbury School and St John's College, Cambridge. He took a high place in the classical tripos at Cambridge in 1858. It was expected Butler would follow the family tradition and enter the church but his agnostic opinions made this impossible. As a result of this family dissension, he was given sufficient capital to come to NZ and establish himself as a sheep farmer. He arrived in 1860 and spent some time exploring the river valleys in the western foothills of Canterbury before purchasing about 4,000 ha of previously unclaimed land, following an exciting race against a competitor to the Christchurch land office.

With an associate and two cadets, Butler built a cob cottage on the property, called Mesopotamia, and farmed there for the next four years. He had a piano in the house and books and pictures, indulging his artistic taste and intellectual curiosity as far as he could in the wilderness.

Butler and an associate explored the tributaries of the Rangitata and Rakaia Rivers, and he discovered Whitcombe Pass with J H Baker. They were the first Europeans to use it, although they did not go down the western side. He paid prolonged visits to Christchurch, exhibiting paintings, playing the piano at a public concert and writing for *The Press*. *A First Year in Canterbury Settlement* was published in 1863, after heavy editing by his father. Butler doubled his capital by selling his property in 1864, before declining wool prices and a run of severe winters temporarily diminished the value of sheep and Canterbury land. In the same year, he returned to London where he studied painting and had pictures hung in the Royal Academy.

It was not until the 1870s that Butler began to write steadily and established a reputation as a philosopher, essayist and novelist. He was a man of enormous intellect and talent who was, in many ways, ahead of his time. His literary reputation has gained in stature and he must be regarded as historically the greatest literary figure associated with this country.

The most celebrated product of his life in NZ was *Erewhon* (1872), a utopian novel whose setting was a mythical land beyond the mountains behind his sheep run, Mesopotamia. He also wrote a series of works of scientific controversy: *Life and Habit* (1877), *Evolution Old and New* and *God the Known and God the Unknown* (1879), *Unconscious Memory* (1880), *Luck or Cunning* (1887) and *The Deadlock in Darwinism* (undated). He held the belief that Darwin was wrong in banishing the concept of 'mind' from the universe, and he maintained the transmissibility by heredity of acquired habits, a view discounted then but gaining intellectual ground today.

Butler wrote travel books, a life of his grand-father, commentaries on Homer (whom he claimed was a woman) and Shakespeare, translated the *Iliad* and the *Odyssey* and in 1901 produced *Erewhon Revisited*. His autobiographical novel, *The Way of All Flesh*, was published posthumously and remains his best-known work. But his published notebooks are also widely read for their commonsense and the delight with which they attack hypocrisy, conventional thinking and pomposity.

Butterfish (*Odax pullus*) is a tasty fish caught throughout NZ coastal waters but more commonly off the South Island. It grows to about 500 mm, has a brown-grey body with fins variegated with bright blue, and broad sweeping anal and dorsal fins. In Maori it is marari, and it is sometimes known as 'greenbone' from the colour of its bones.

```

Butterflies are among the most appealing of all insects but sadly comprise only a small part of the fauna of NZ with 16 species found regularly here and another seven that get blown across the Tasman Sea from time to time.

Butterflies are not very distinct from moths. Both make up the insect order, Lepidoptera, whose members have their wings decorated by thousands of tiny overlapping coloured scales. The simplest way of distinguishing between butterflies and moths is by the slender, knobbed antennae of the butterflies.

NZ butterflies do not include any representatives of the spectacular swallowtails or the smaller skipper butterflies that are present throughout tropical countries.

An oddity among the six-legged insects is the Nymphalidae family of butterflies which stand on only four legs. Among them are the monarch, the admirals and the ringlet species. They actually have six legs, of course, but the front pair are very small and are held tucked up against the body. The whites, blues and coppers use their six legs in the normal insect manner.

Eleven species of butterfly are unique to NZ, five of them confined to the mountain areas of the South Island. All of these endemics have evidently survived and evolved here for millions of years. Most of them are open country butterflies of the tussock lands, riverbeds or sea coasts but three species are associated with forest: the red admiral (*Bassaris gonerilla*), forest ringlet (*Dodonidia helmsii*) and glade copper (*Lycaena feredayi*).

The five species of ringlet butterflies found on mountains of the South Island — the three tussock butterflies (*Argyrophenga antipodum*, *A. harrisi*, *A. janitae*), the black mountain ringlet (*Percnodaimon pluto*) and Butler's ringlet (*Erebiola butleri*) — have remarkable look-alikes in the northern hemisphere mountains, yet their near relatives are in the Australian region.

Perhaps the most intriguing NZ group is the copper butterflies — four species with small but brilliantly lustrous wings. They are the common copper (*Lycaena salustius*), the glade copper (*L. feredayi*), Rauparaha's copper (*L. rauparaha*) and the boulder copper (*L. boldenarum*). They have their nearest relatives in Europe and Asia.

The diminutive common blue butterfly (*Zizina otis labradus*) of roadsides, fields and gardens has an extensive distribution throughout many Pacific Islands and Australia but a distinctive form, the southern blue (*Z. o. oxleyi*), is found only along the drier eastern side of the South Island.

A small contingent of Australia's vast butterfly fauna of well over 300 species are migratory in habit and may occasionally be encountered in NZ. All degrees of colonisation are found

from the yellow admiral (*Bassaris itea*) which is a permanent resident, through the spasmodic but quite spectacular immigrations of species like the painted lady, blue moon and meadow argus to certain rare or very rare arrivals — the lesser wanderer, blue tiger, evening brown or lemon migrant.

The painted lady (*Cynthia kershawi*) occurs virtually every year and may breed here for one or two summer generations.

The blue moon (*Hypolimnas bolina*), and other species which are occasionally seen here including the lesser wanderer (*Danaus chrysippus*), the meadow argus (*Precis villida*), blue tiger (*Danaus hamatus*), evening brown (*Melanitis leda*) and lemon migrant (*Catopsilia pomona*), listed in order of frequency of occurrence. Only one specimen of the lemon migrant has been recorded and that was prior to 1876.

Proof of the natural aerial journey of these migrants has come on the occasions when the occurrence of large numbers of species seen migrating in Australia coincides with sightings in NZ. The insects can arrive in perfect condition, not necessarily damaged by such a long journey over the sea. In some years hundreds make the journey and are reported from all over NZ, but especially from western districts where they make their landfall after two or three days over the sea. One butterfly that was accidentally introduced into NZ by man and has not been a welcome immigrant is the cabbage white (*Pieris rapae*) whose caterpillars eat vegetables and stock-food crops in the cabbage family. Numbers reached epidemic levels in the 1930s before some tiny parasites were introduced to suppress it.

A far more widely appreciated introduction was the monarch butterfly (*Danaus plexippus*) which probably arrived as a result of its own powers of flight. It is reported to have crossed the Pacific Ocean in the late 19th century from North America via Hawaii, a journey that took about 30 years of island hopping and establishment. NZ has no native plant on which the handsome black, yellow and white caterpillars can feed. However, swanplants are now grown in many home gardens with the purpose of attracting the egg-laying monarch and they have enabled it to become a permanent resident.

Another foreign butterfly has a similar history but relies for its continued survival in this country on gorse and other introduced pea flowers on which the caterpillar feeds. The long-tailed or pea blue (*Lampides boeticus*) is a small, fast-flying butterfly which was first reported in Auckland in 1965. It has now colonised several districts in the north and west of the North Island and the area around Nelson.

Butterflies' lives are generally short. The smaller the butterfly the shorter its lifespan as an adult. Copper and blue butterflies live about eight to 12 days, ringlets perhaps a little more, while the robust admirals and monarch live for several months and those which emerge in autumn will survive through the winter until early summer. However, it must be remembered that the adult butterfly is only the reproductive phase of the life-cycle. The creature spends more time as egg, caterpillar and pupa than as an adult. Thus the total lifespan — from egg to adult death — varies from a few months in the summer for the coppers, blues, monarch, white and admirals to between one and three years for the ringlets.

BEADLE, Paul John

Paul John Beadle (1917-92) was born in Hungerford, England, educated in Cambridge and attended Cambridge Art School and later the Central School of Arts and Crafts in London. He served in the Royal Navy during World War Two and took his discharge in Australia, where he held various art teaching posts from 1947 to 1960. In 1961 he was appointed Foundation Professor of the School of Fine Arts at Auckland University, and was influential in the expansion and diversification of the school in its formative period. He held many exhibitions which have brought him an international reputation, especially as a worker in metal. His sensitive handling of woods native to Australia and NZ demonstrates his versatility and his harmony with wood as a medium.

BEN LOMOND

Ben Lomond, a 1750-m high peak overlooking Queenstown on the east of the central arm of Lake Wakatipu in Lake County, Central Otago, was named in 1861 by shepherd Duncan MacAusland because he thought it resembled in shape the 973-m high peak in Stirlingshire, Scotland.

BIDDLE, Benjamin

Benjamin Biddle (1848-1933) was one of the first three men awarded the New Zealand Cross by Gazette on 25 March 1869 (along with Henare Ahururu and Solomon Black), for bravery at Ngatapa in January 1869 against Te Kooti and the Hauhau. He had been a seaman before he joined the Armed Constabulary.

BLACK, Solomon

Solomon Black (1834-?), was one of the first three men awarded the New Zealand Cross on 25 March 1869. Black arrived in NZ in 1864, became a private in No 1 Division of the Armed Constabulary, and received his decoration for gallantry in holding his position in the siege of Ngatapa, against Te Kooti on 8 January 1869. Black was born in Scotland and was living in Glasgow in 1910 but there is no record of his death.

BROWN SWISS

Brown Swiss cattle began to take their place in NZ dairy herds in 1975, when the first halfbred calves were born following the introduction of semen the year before from purebred bulls in Europe and North America. Later, bulls were imported. Dams of most other dairy breeds were used for an upgrading programme of displacement breeding. The breed has an established reputation in some other countries for a particularly long productive life, high milk and fat production, general hardiness and large carcass at maturity. Its large frame makes it suitable for dairy beef production.

The breed, also known as Schwyz, goes back hundreds of years in Swiss agriculture, and is probably the oldest fixed dairy breed in the world. It has been an important breed in the North American industry since it was first introduced to the US in 1869.

BYRD, Richard Evelyn

Richard Evelyn Byrd (1888-1957), was an American explorer and aviator. He made the first flight to the North Pole in 1926, and to the South Pole in 1929. He established an association with NZ during four subsequent US expeditions to Antarctica between 1929 and 1956. Marie Byrd Land and the Byrd Glacier in Antarctica are named after him.

CABBAGE TREE

```

}
```

Cabbage Tree (*Cordyline australis*) flourishes in swampy land throughout NZ and grows as tall as 13 m, which makes it one of the tallest of the *Cordyline* genus. There are four other species in NZ, the two most common being *C. banksii* and *C. indivisa*.

Contrary to popular belief there is no evidence that Maori or early settlers used the tree's bushy crowns as a substitute for cabbage, not surprisingly since they are reputedly tough and bitter. J Beever published an article in 1981, putting the record straight. Part of the confusion lies in the early use, dating back to the 17th century, of the word 'cabbage' for palms and hence, in early 18th and 19th-century NZ literature, to nikau which does have an edible shoot. This accounts for an incident at Tolaga Bay described by both Cook and Banks in 1769. G Forster's account of the cutting and eating of 'cabbage' from a 'dragon tree', at Dusky Sound during Cook's voyage of 1773, can only have applied to *C. indivisa*, not *C. australis*.

The Maori extracted food from the other end of the cabbage tree, the root, which is shaped like a parsnip, grows up to a metre in length, and is a nutritious vegetable (kauru) when steamed in a ground oven.

Cabbage trees have been afflicted by a disease since the 1980s which has diminished their numbers.

CABINET

Cabinet is the executive arm of government in NZ, whose members are Ministers of the Crown, and which implements government policy, co-ordinates the work of ministers, and prepares or approves legislation. It has the same membership as the Executive Council but was not created by statute. It exists by convention and its proceedings are informal and confidential. Although the Governor-General normally presides over the Executive Council, he or she is not a member of it, and takes no part at all in the business of Cabinet.

Cabinet aims at decision-making by consensus rather than by voting, thus reinforcing a tradition of collective responsibility for its decisions. Once the executive agrees on a proposal, it is assured of the support of the government in the House of Representatives.

Over the years the practice of forming separate Cabinet committees has evolved, with membership by those ministers whose responsibilities overlap in certain broad areas, such as transport or communications. The Cabinet of the day determines the number, scope and membership of these committees. Because NZ has had a unicameral parliament since the Legislative Council was disbanded in the early 1950s, Cabinet has more executive power than in other western democracies.

Cabinet is administratively serviced by the Cabinet Office and by a secretary who is also Clerk of the Executive Council (*See also Executive Council.*)

CAIRNS, Bernard Lance

Bernard Lance Cairns (1949–) began an outstanding cricket career as a first-class bowler in the summer of 1971–72 when he played his first first-class match for the NZ under-23 against Otago. The powerfully built, Picton-born cricketer, known by his middle name, Lance, won a test place in 1973–74. Cairns six times took more than five wickets in a test innings: against India in 1976–77, West Indies in 1979–80, against both Australia and India in 1980–81, and against England twice in 1983–84.

But although he was for nearly 15 years a regular member of the NZ team as a right-arm medium pace bowler — steady and full of guile — it was as a right-hand batsman, a huge hitter of the ball, that he primarily endeared himself to fans throughout NZ and Australia. His ability to hit spin or medium pace bowling over the fence made him a special drawcard in one-day, limited-over internationals, for a while using a specially made heavy bat he called ‘Excalibur’.

Up to the mid-1980s, he ranked second only to Richard Hadlee as a one-day all-rounder.

A son, **Christopher Cairns**, is a brilliant all-round cricketer, technically a more polished batsman than his father, but also a big hitter of the ball for NZ in both tests and one-day internationals.

```

Cambridge is a town in the Waikato, on the banks of the Waikato River, 24 km southeast of Hamilton. Population is 12,500. It is a servicing centre for the highly productive farmland surrounding it — some of the most fertile dairying land anywhere in the world — and many inhabitants commute to Hamilton. A tradition of planting English trees (for which the town is noted) was started by the earliest European settlers, and wide streets and generous parklands reinforce the Englishness.

Before European settlement Cambridge was the site of Horotiu Pa, a powerful Maori tribal stronghold. European settlement followed the unsuccessful attempts by Maori to defend their land in the region from British and colonial forces. Each man of the Third Waikato Regiment was allocated a 20-ha block of land and a residential section.

Cambridge became a town district in 1882, a borough in 1886, was enlarged in 1958 when it absorbed Leamington, on the southern bank of the river, and was incorporated administratively in the Waipa District Council in 1989.

CAMERON, Alexander Christie

Alexander Christie Cameron (1893–1961), a businessman and civic leader of great energy, was born in Dunedin and served on a vast number of organisations, but is best known as founder of the Young Farmers' Club in the 1930s.

CAMERON, Sir Duncan Alexander

Sir Duncan Alexander Cameron (1808–88) was a British professional soldier. He served in the Crimean War and came to NZ in 1861 as a Major-General to command the Imperial forces against the Maori in the Land Wars. He fought in the Waikato and in Taranaki but later came to disapprove of the war which he believed was being deliberately waged for the benefit of land-hungry settlers. Consequently, in 1865, he resigned and returned to England. From 1868 to 1875 he was governor of Sandhurst College.

CAMPAIGN MEDALS

Campaign medals for the armed forces fighting in NZ were approved in March 1869 for British troops and extended to colonial troops six months later. The NZ Medal was awarded to those who had actually been under fire in any engagement from 1845 through 1847 or from 1860 through 1872.

The medal, when issued by the NZ government, usually had an undated reverse but the one awarded by the British government to those who had served in the Imperial Commissariat Corps had a reverse dated 1861–66. It was necessary for the volunteers and militia to make personal application for the medal — which many neglected to do. About 5,000 members of the NZ forces were entitled to receive the medal.

The Queen's South Africa Medal was awarded to about 6,500 NZ Mounted Rifles troops who served in the war in South Africa between 1899 and 1902. Twenty-six clasps were issued with this medal to commemorate service in various areas. NZ troops were eligible for a selection of the following: Cape Colony, Rhodesia, Relief of Kimberley, Paardeberg, Orange Free State, Driefontein, Transvaal, Johannesburg, Diamond Hill, Wittebergen, Belfast, South Africa 1901 and South Africa 1902.

The King's South Africa Medal was awarded in addition to the Queen's South Africa Medal to those who served for 18 months in the war. Four nursing sisters and 168 men received this medal.

Service in World War One was recognised by the award of four medals:

- The 1914–15 Star for all who saw service in any theatre of war between 5 August 1914 and 31 December 1915.
- The British War Medal was issued to all who served during the war.
- The Mercantile Marine War Medal was awarded to members of the merchant navy who served on at least one voyage in a war zone.
- The Allied Victory Medal was awarded to all who served in a theatre of operations during the war.

Service in World War Two was recognised by the award of campaign stars with varying qualifications for the three services:

- The 1939–45 Star for six months' service.
- The Atlantic Star for six months' service.
- The Air Crew Europe Star for operational flying between 3 September 1939 and 5 June 1944.
- The Africa Star for service in North Africa between 10 June 1940 and 12 May 1943.
- The Pacific Star for service in the Pacific war theatre between 8 December 1941 and 2 September 1945.
- The Burma Star for service in the Burma campaign between 11 December 1941 and 2 September 1945.
- The Italy Star for service in Sicily or Italy between 11 June 1943 and 8 May 1945.

- The France and Germany Star for service in France, Belgium, Holland or Germany between 6 June 1944 and 8 May 1945.
- The Defence Medal for six months' service in a non-operational area.
- The War Medal awarded to all fulltime personnel of the armed forces.

The NZ War Service Medal for 28 days of fulltime service or six months of part-time service.

- The campaign in Korea was recognised by the award of two medals:
- The Korea Medal for service between 2 July 1949 and 10 June 1953.
- The United Nations Korea Service Medal for any service after 27 June 1950.

Those NZers who served in Malaya between 16 June 1948 and 31 July 1960 were awarded the General Service Medal with a clasp, Malaya.

Those who served in Brunei between 8 December and 23 December 1962 were awarded the General Service Medal with the clasp, Brunei.

The General Service Medal became obsolete in 1962 and was replaced by the Campaign Service Medal which was authorised in October 1964. NZ troops serving in the Malay peninsula between 17 August 1964 and 11 August 1966 were issued with this new medal and clasp, Malay Peninsula. Those who served in the Borneo area had the clasp, Borneo.

The Vietnam Medal was awarded only to NZ and Australian armed forces and to qualify they had to serve for at least 28 days from 28 May 1964. The Vietnam government recognised the service of these forces by the award of the South Vietnam Campaign Medal for those with six months' service.

In December 1979, 74 NZ soldiers qualified for the Rhodesia Medal 1980. They were part of a 1,200-strong Commonwealth truce monitoring group who served in Rhodesia until March 1980.

Special awards have been issued over the years to the families of NZ servicemen who have died on active service.

The next of kin of those who died in World War One received a bronze plaque bearing the name of the deceased.

The next of kin of deceased servicemen during World War Two were awarded the NZ Memorial Cross with a purple satin pendant ribbon and bearing the name of the deceased impressed on the back.

The NZ Memorial Cross was also issued to the next of kin of servicemen who died in Korea or Malaya, except that the pendant ribbon was replaced by a brooch clasp.

Alistair Te Ariki Campbell (1925–) has been for more than 40 years one of NZ's leading poets. His first collection, *Mine Eyes Dazzle*, was published in 1947 and reissued in 1950, and in revised editions in 1951 and 1956. Several collections since then include *Sanctuary of Spirits* (1963), *Wild Honey* (1964), *Blue Rain* (1967) and *Kapiti: Selected Poems, 1947–71* (1972). He has also written plays for stage and radio, film, scripts and lyrics for songs. Campbell was born in Rarotonga in the Cook Islands and was educated at Otago Boys' High School, Victoria University, where he took a BA, and Wellington Teachers' College.

Sir John Logan Campbell (1817–1912) is the best remembered of Auckland's pioneers. He was present at the founding of the city in 1840, was involved in a wide range of business enterprises as a general merchant, brewer, liquor wholesaler, wholesaler and was director of many companies in which he was an investor. He gave service to many local organisations, and made many bequests and charitable grants both when he was alive and even today through his Sir John Logan Campbell Trust. Campbell was born in Edinburgh, the son of a doctor, and graduated as a physician himself. He emigrated to Auckland as a ship's doctor in 1839 and first arrived in NZ in 1840, at Coromandel.

When they heard that the capital of the colony was to be moved to Auckland from the Bay of Islands, Campbell and his partner, William Brown, established business premises (Brown, Campbell and Co) near the beach in Commercial Bay in Auckland, about where Shortland Street is today. They were involved in the first export direct from Auckland to England, which included kauri spars, copper and manganese, aboard their ship, *Bolina*.

Campbell retained his business interests in Auckland until his death at the age of 94. He left NZ for two years between 1848 and 1850 when he visited Scotland and then San Francisco (where he made a huge profit from a cargo of produce he took to sell during the Californian gold rush); for another two years in the 1850s when he visited India and Italy; and for some years between 1861 and 1871 when he lived in Europe, mostly in Italy. His grave is beside the obelisk on One Tree Hill in Auckland which was erected at his request, and Cornwall Park is part of his legacy to the city.

Campbell's memoirs of his early life, *Poenamo*, was first published in 1881, and a two-volume biography by R C J Stone was published during the 1980s.

CAMPBELL ISLAND

```

Campbell Island, Lat 52°30' S and Long 169° E, is the southernmost of NZ's outlying islands, 600 km south-east from Stewart Island and about 250 km south-east from the Auckland Islands. The island has an area of 114 km². It was discovered in 1810 by Captain Frederick Hazelburgh in the *Perseverance*, a sealing ship, and within a decade the seal population had been almost exterminated through wholesale slaughter. The soil is capable of limited productivity, and between 1895 and 1931 sheep were run on the island. A meteorology station was manned continuously for 50 years from 1941, conducting ionospheric research and providing a flow of information to the meteorological service in Wellington for the preparation of weather reports.

CAMPBELL PLATEAU

Campbell Plateau is a submarine platform spreading southwards from Stewart Island for 600 km, with a bulge to the east which gives it a maximum width of 1,000 km. The plateau is mostly between 200 and 500 fathoms deep but it breaks the surface to form the Bounty Islands, the Auckland Islands, the Antipodes Islands and Campbell Island.

CAMPION, Jane

Jane Campion (1954–) was born in Wellington, educated at Victoria University (BA in anthropology), at the Chelsea School of Arts, London, and the Sydney College of the Arts. She attended the Australian Film and Television School, graduating with a Diploma in Direction, and by the mid-1980s was recognised as a film director of rare ability. She has won numerous awards, including the Palme D'Or at Cannes for the best short film, in 1986. Her best known films are: *Sweetie* which she co-wrote and directed; *An Angel at my Table* (based on the autobiography of Janet Frame), which she co-wrote and directed; *The Piano* which she wrote and directed and which was acclaimed around the world, won awards internationally and was nominated for Academy Awards in nine categories (Anna Paquin of Wellington won best supporting actress). Short films, *Peel*, *Passionless Moments* and *Girls Own Story* were released nationally in the US. Campion made *Portrait of a Lady*, based on the Henry James novel, in 1995, by which time she was established as one of the world's top film directors. A daughter of Edith and Richard Campion, she has been based in Australia since 1978.

CAMPION, Edith and Richard

(see Drama)

CANNIBALISM

Cannibalism was practised by the Maori, following war, as a final humiliation inflicted on the defeated by the victors. After a skirmish most captives were killed and eaten, although young women and children were often taken as slaves. At one time it was considered that the lack of large game animals in NZ left the Maori's basic diet protein-deficient and thus cannibalism was a way of supplementing their protein intake. However, it is generally considered now that birds and fish were so plentiful that they would have provided adequate nutrition along with the normal vegetables and fruits of their diet.

CANOEING

```
{ewc

c0150pas.dib
}
```

Canoeing as a competitive sport began to be taken seriously in NZ with the growing success in international competition during the late 1970s and early 1980s of a small group of former surf lifesavers — most notably Ian Ferguson, Alan Thompson and Paul MacDonald. And in 1984, at the Los Angeles Olympic Games, the canoeing team won four events — Ferguson in the kayak singles over 500 m (K1/500); Ferguson and MacDonald in the K2/500; Thompson in the K1/1000; and Ferguson, MacDonald, Thompson and Grant Bramwell in the K4/1000. The effect on the public imagination was such that the canoeists became national heroes and the number of senior competitors in Olympic class events at the national championships grew from 18 in 1983 to 60 in 1985.

Canoeing goes a long way back in our history. Maori were traditionally superb sailors and the canoe was part of their heritage, both for sea voyaging and for using NZ's rivers and coastal waters as highways for travel round the country. Their feats in small boats were extraordinary by today's standards and there is no doubt they paddled competitively under various circumstances. Edward Jerningham Wakefield in his *Adventures in NZ* describes Maori canoes working up the rapids on the Whanganui River as 'a very pretty sight. As it is hard work they generally strip leaving only a skirt of mat round the waist, and the exercise throws them into the graceful poses and develops their muscular energy.'

Faced with a lake to cross or a small river journey, Maori made raft-like craft from raupo lashed together, sometimes in the shape of a canoe. They could also quickly make a raft of logs with struts lashed across from a log-hull to another, outrigger-style.

But for a large canoe, the work was arduous and time-consuming with stone tools and flax lashing. It was a sacred task with a tohunga required to lift the tapu from a chosen totara tree to be felled and to propitiate Tane, god of the forest. Men worked in relays to fell the tree with adzes and fire and to shape the dug-out vessel. A war canoe would have special topside platforms and braces with a special bow piece called tauihu, and an elaborately carved stern-post known as taurapa. Canoes for fishing or for casual coastal transport were more plain and river canoes were usually simple, unadorned dug-outs.

The first canoe club was the Tainui of Wellington, founded about 1880 as a branch of Britain's Royal Canoe Club. Written records abound of Pakeha making cross-country canoeing trips in canoes up to 6 m long. The kayak design is based on Eskimo canoes and the first known kayaks in NZ arrived in the 1880s. They were generally built of planks with canvas decking and were usually about 4.2 m long. Two brothers, G and J Park, were the first Pakeha sportsmen to cross Cook Strait by canoe, paddling from Mana Island to Queen Charlotte Sound in 1890.

Six years later, a 16-year-old Wellingtonian, H Shearman, paddled his 3.5-m canoe from Mana Island to Cape Koamaru. Recreational kayaking has become a booming sport in boating waters during the 1990s.

The NZ Canoeing Association was formed in 1950. The first national kayak championships were held in 1955 over the Aramoho rowing course at Wanganui. The following year, Tom Dooney of Palmerston North began to have successes that made him the first dominant figure in the sport in this country. In 1958 when he won the K1/1000 and K1/10,000, and the kayak doubles over 500, 1,000 and 10,000 m (all with L Hastie), and in 1959 won six of the seven titles, missing out only in the slalom.

In 1976, champion lifesaver Ian Ferguson won the national K1/500 and was second in the K1/1000 and for the next ten years he and Paul MacDonald, with Alan Thompson and Grant Bramwell, dominated the sport in NZ and were gold medallists at many Olympic and world championship events.

Canterbury is a province and a region on the eastern side of the South Island. It is bounded to the west by the Southern Alps, and to the east by the Pacific Ocean. The coastline consists mostly of the long sweep of the Canterbury Bight — 135 km from Banks Peninsula to Timaru. (The bight was once known as Ninety Mile Beach, and its 84 miles (135 km) was a truer reflection of that name than the 60-mile (96 km) beach on the western side of the top of the Northland Peninsula which now carries the name.)

The region is based on the Canterbury Plains, an area of merged river deltas, 193 km in length from north to south, and about 65 km at its widest point. The Plains are by far the largest stretch of flat land in NZ. At the northern and southern ends, the plains undulate into rolling downs. The largest rivers, which traverse the land and carry run-off from the mountains and foothills to the west, are the Waimakariri, the Rakaia, the Ashburton, the Rangitata and the Waitaki. The region is sub-divided into North, Central and South Canterbury.

The province was named after the Canterbury Association formed in England in 1848 with the purpose of organising an idealised Anglican settlement in NZ. The association's members included two archbishops, five bishops, assorted peers and baronets, and its name came from the chief primatial see of the Anglican Church. The Archbishop of Canterbury was the president of the association.

The original European settlers arrived early in the 1840s, although whalers had been visiting before that. The Europeans found fewer than 1,000 Maori in the whole region, most of them in the bays of Banks Peninsula, at Kaiapoi, Temuka and Waimate. A period of fierce raiding by tribes from the North Island earlier in the century had reduced the population sharply. This absence of Maori and the huge stretches of native tussock land suitable for immediate adaptation to the kind of pastoral farming immigrants had known in the northern temperate zone made Canterbury an attractive settlement area. It was constituted a province in 1853 within the boundaries of the Hurunui River to the north and the Waitaki River to the south, and from the Pacific Ocean in the east to the Tasman Sea on the western side of the Southern Alps. At that time almost all the European population was settled either on Banks Peninsula or near the present site of Christchurch. During the 1860s gold was discovered on the western side of the Alps and government from Christchurch being impracticable, Westland County was formed in 1868 as a self-governing region.

Once the pastoral potential of the Canterbury Plains had been recognised, men and sheep arrived literally in droves, some from Australia following a serious drought there at the turn of the decade into the 1850s. By 1855 all the flat land had been taken up, and five years later men and sheep had moved on to the high country of the alpine foothills. Canterbury has lived off sheep, grain and mixed farming ever since. It is served by Christchurch International

Airport at Harewood, a suburb of Christchurch, and by the seaport at Lyttelton, and a railway that runs from Picton in the north to Invercargill.

CANTERBURY MUSEUM

Canterbury Museum was founded in 1867 with great impetus from the provincial geologist Julius von Haast. Its first home was an upstairs room in the Provincial Council buildings, where von Haast arranged his working collections for the inspection of the people in Canterbury. For three years von Haast and his supporters in the Canterbury Provincial Council waged a campaign for a permanent home for the museum, and in 1870 the museum was opened on its present site in the attractive setting of the Christchurch Botanic Gardens.

By 1882, as the result of several additions, the province had an impressive 3,700 m², two-storeyed museum building. Designed by B W Mountfort, this neo-Gothic style building in stone masonry quarried from the neighbouring Port Hills brought a dignity to the town of Christchurch, then little more than thirty years old. The museum built up its collections in geology, zoology and ethnology, often by exchanging moa bones for items from overseas institutions.

From 1940, under the direction first of Dr Robert Falla, and later Dr Roger Duff, the museum launched into a programme of imaginative displays and the building up of important collections in NZ geology and zoology, Maori and Polynesian ethnology and archaeology, Melanesian ethnology, domestic relics, archives and documents of the British settlement of Canterbury, relics of Antarctic exploration, whaling, and NZ stamps.

In recent years two major additions have been made to the old museum building of 1882. The Centenary Memorial Wing opened in 1958 adding another 3,700 m², doubling the area, and the 100th Anniversary Wing, completed in 1977, added a further 2,870 m².

CANTERBURY UNIVERSITY

(see University of Canterbury)

CAPE ADARE

Cape Adare is on the Pennell Coast in NZ's Ross Dependency, Antarctica. It was here that 17-year-old Alexander von Tunzelmann, nephew of a Central Otago pioneer, became the first NZer and possibly the first person ever to set foot on the Antarctic Continent, on 24 January 1895, as a member of an expedition aboard the ship *Antarctic*. A combined NZ/US scientific base, Hallett Station, was sited nearby from 1957 to 1964, when a fire destroyed most of the scientific equipment. The NZ base is now at McMurdo Sound.

Cape Farewell is at the extreme north-west of the South Island in Golden Bay County, Nelson. Farewell Spit extends to the east of Cape Farewell for 24 km. The Spit, about 500 m wide, is banked with sand hills up to 25 m in height, and ends with a lighthouse. Both the Cape and the Spit are frequently lashed by savage winds from the ocean and have been the scene of numerous wrecks. The Spit is a wildlife refuge for the protection of the godwits and other migratory species which spend the summer there before migrating to Siberia and Alaska, one of the longest migrations undertaken by birds anywhere. The Cape and the Spit were named by James Cook as he left for Australia at the end of his first visit in March 1770.

Cape Foulwind is at the southern end of Karamea Bight, in Buller County, on the west coast of the South Island. It was named by James Cook in March 1770 because of gales which rocked the Endeavour in a 'prodigious swell'. In 1642 it had been named 'Rocky Point' by Abel Tasman.

```

Cape Kidnappers, at the southern end of Hawke Bay, 32 km south-east of Napier, is the site of a world famous gannet colony where the large white Australian gannet (*Sula bassna serrator*) nests from November to February. The walk along the beach from Clifton to the cape provides in the cliff faces an excellent cross-section of the rocks underlying Hawke's Bay and chronicles the gradual uplift of the land over the last five million years. From Clifton almost to Black Reef the cliffs are composed of sandstone, gravel, pumice and silt beds. They range in age from about 300,000 years old near Clifton to about a million years old near Black Reef. During that period, rivers and tongues of very shallow sea water covered coastal areas of Hawke's Bay. The gravel beds were deposited in river courses and estuaries.

Immediately above the hard sandstone forming Black Reef is a grey sand bed called the Maraetotara Sand, containing numerous fossil shells. Over 100 species of shells have been recorded from the Maraetotara Sand and although most are similar to the mussels, oysters, tuatua and whelks now living around NZ coasts, some extinct types are also present. The shells show that the Maraetotara Sand was deposited in slightly deeper water than the younger beds further towards Clifton, probably in water 10 or 20 m deep off a gently shelving sandy beach.

Extending from the north-west to Cape Kidnappers and for some distance south, the cliffs consist of firm fine-grained pale blue-grey siltstone (called 'papa'), with scattered fossil shells and bands of round concretions. The fossils show that the papa siltstone was laid down four to five million years ago in deep water, well offshore, on the edge of the continental shelf.

During uplift of the rock layers to form land, the sea carved a series of flat surfaces on to the rocks, to form benches. At the cape the benches cut into the beds of papa siltstone have been used as nesting sites for the main Cape Kidnappers gannets.

The cape was originally named 'Cape Kidnapper' by James Cook in 1769, after local Maori had tried to kidnap a young Tahitian from aboard the Endeavour. The young man was rescued. The Maori name is Te Matau-a-maui, the fishhook of Maui.

```

Cape Reinga is a soaring headland at the western end of Spirits Bay at the end of the North Auckland peninsula. It overlooks the meeting of the Tasman Sea and the Pacific Ocean and is the departure point for Maori souls back to the spiritual homeland of Hawaiki. The pohutukawa tree, from which the souls are said to make their final leap, grows from the face of the cape and is said to be 800 years old.

```

Cape Turakirae preserves, in its shoreline, a clear geological record of the various earth movements that affected the southern end of the North Island during the last half of the Ice Age and the post-glacial period.

Turakirae lies to the east of the mouths of the Wainuiomata and Orongorongo Rivers and forms a prominent headland between Port Nicholson and Palliser Bay. It has been formed where the hard rocks of the Rimutaka Range jut out into Cook Strait, and have been shaped by the sea to form a massive headland. This situation is accurately described by the Maori name, meaning the headland (rae) where the main range comes down (turaki) to sea level.

The mountain ranges of NZ are still being pushed up and the known effects of recent earthquakes, such as that of 1855, suggest that this happens by means of a series of small sudden upward movements, of perhaps a few metres at a time, spaced at intervals measurable in centuries. These small movements, extending over millions of years, have raised the mountains high above the seas.

The upward movements that formed the Rimutaka Range, along with other features of the southern extremity of the North Island, were accompanied by westwards tilting (as occurred in the 1855 earthquake), which has been responsible for the formation of Port Nicholson. Each upward movement caused the sea to retreat, exposing a strip of rock sea bed for a width varying with the amount of uplift (a small uplift will only expose a narrow strip of sea bed), and leaving a ridge of beach deposits (gravel, shells, etc.) on the landward side.

The Maori traditions record that in the time of Te Ao-haere-tahi, who lived 'some eighteen generations ago' (estimated to have been about AD 1460) a great earthquake occurred, known as Haowhenua (land swallower or destroyer). However, the tradition makes it clear that uplift and not subsidence took place. The channel between Motu-Kairangi and the Kilbirnie mainland became shallow enough to wade and soon silted up, to convert that island into the present Miramar Peninsula. The amount of upward movement measured at Turakirae is about 5.8 m.

The Turakirae beaches are also of interest to the soil scientist, botanist and zoologist. Studies of the strips of old sea bed between the raised beaches provide the soil scientist with information on rates of soil formation, and the botanist with a record of progressive colonisation by plants of new land. The prominent rocks at the head itself provide shelter for a seal colony, of considerable interest to both zoologists and the public.

CAPITAL PUNISHMENT

Capital punishment for murder in NZ was abolished in 1961 after a free vote in the House of Representatives. The only two periods in NZ history when the law did not provide for execution for murder, and often other offences, were between 1941 and 1950, and since 1961. But between 1935 and 1941, and from 1957 to 1960 all death sentences were commuted by Labour governments whose historic policy was against capital punishment.

The first hanging — and all legal executions have been by hanging — was of a Maori named Maketu convicted of murder, in Auckland in 1842. There are no adequate statistics for executions until the 1880s but the indications are there were many more criminals put to death during last century than in the 20th. There were 21 hangings in the 20 years between 1880 and 1900.

During the first 20 years of this century, there were fewer than ten but following World War One there was an upsurge with 13 executions in 15 years — exactly half of those convicted of murder during that period.

The Labour government commuted all death sentences from 1935 until it changed the law in 1941, but the new National administration restored it from 1951 and until Labour won power again in 1957 eight of the 18 people convicted for murder were hanged. In 1961, the conscience vote in Parliament saw ten National MPs vote against capital punishment.

Executions were in public before 1862, but after that were within prison walls and viewed only by prison staff, justices of the peace and up to ten adult male spectators invited at the discretion of the sheriff. There is no record of any convict in NZ being executed for any crime other than murder, but before the 1870s the law provided for the death sentence for such crimes as robbery with violence, arson (in some cases) and even buggery (bestiality or sodomy).

Three women have been sentenced to death in NZ for murder — Caroline Whitting in 1872, Phoebe Veitch in 1883 and Williamina (Minnie) Dean in 1895. But only Minnie Dean was executed (in August 1895). The other two had their sentences commuted to imprisonment for life.

CAPLES, Patrick Quirk

Patrick Quirk Caples, (1830–1904) was one of the most resourceful gold prospectors in early NZ. He had success first at the Otago diggings and, after moving to Westland, discovered fields at Point Reefton, Moonlight and Caplestone. He erected the first quartz battery on the West Coast.

At the beginning of 1863 Caples started out alone from Queenstown to walk to the West Coast, crossed the mountains at the head of the Dart River, moved down into the valley of the Hollyford River which he named, and then had to go back because of shortage of supplies.

On a second attempt, he crossed the mountains at the head of the Greenstone River, followed the Hollyford down to Martin's Bay, and made an accurate map of his route.

Carbine was NZ's first internationally successful racehorse. His performances on the track in Australia, and at stud in both Australia and England, gave the NZ thoroughbred industry its first claim to fame. The horse was bred at Sylvia Park Stud, on the outskirts of Auckland, in 1885, and was sold to Dan O'Brien of Riccarton for 620 guineas. It won all five of its races as a two-year-old and, after faltering at the beginning of its three-year-old season in Australia, impressed with some fine wins at the end of the year. As a four-year-old, Carbine failed in the Melbourne Cup carrying ten stone (63.5 kg), but had a remarkable season otherwise. It was as a five-year-old that Carbine excelled himself. He carried ten stone, five pounds (65.78 kg) to victory in the Melbourne Cup (a record which still stands), in the then race-record time of three minutes and 28.25 seconds, from the largest field ever. He had a career record of 33 wins, six seconds, three thirds and was unplaced only once.

He produced great progeny in both Australia and Britain, where he went to stud towards the end of his life. He lived to the age of 27.

CARDIGAN BAY

Cardigan Bay was NZ's most famous pacer and the first in the world to earn a million dollars. Born and bred in Southland in 1956, 'Cardy', as he was called, had his best year in NZ in 1963 when he won the Inter Dominion Pacing Championship, the NZ Cup (from 54 yards) and the Auckland Cup (from 78 yards), made an unprecedented clean sweep of the four major pacing races at the NZ Cup meeting, and set an Australasian mile record of one minute and 56.2 seconds at Hutt Park, Wellington.

After a fine career in the US, where he took his career winnings past \$1 million, Cardigan Bay returned to NZ in 1970, toured the country for farewell performances before trotting crowds, and then retired to the farm of Sir Henry Kelliher on Puketutu Island, just outside Auckland City. He died there in 1988.

CAREX

Carex is the largest genus of the sedge family, Cyperaceae, in NZ with nearly 100 representatives, three-quarters of them native. They are generally similar to grasses but differ in the structure of the flowers and flower stalk. Some species are found as plants of the forest floor, but most are found in swampy areas.

The introduced species have probably come in as impurities in agricultural seed from Europe and Australia. Some species are now in cultivation as ornamental tussocks, as are some native grasses.

CARGILL, Edward Bowes

Edward Bowes Cargill (1823–1903), the seventh son of Captain William Walter Cargill, was born in Edinburgh and became a merchant seaman at the age of 14. He sailed around the Pacific and South-East Asia, and settled in Ceylon, first working for a bank and then as a merchant in partnership with others. He moved to Melbourne as a merchant for two years before settling in Dunedin in 1858. For the first few years he was in partnership with pioneer farmer and businessman, Johnny Jones of Waikouaiti, in shipping and merchant enterprises. He went into partnership briefly with his brother, John Cargill, before Jones and he together formed the Otago Steam Navigation Company to work the intercolonial trade. The company was the forerunner to the Union Steam Ship Company, of whose first board of directors Cargill was a member. His business interests over the following 40 years spread into almost every major enterprise in Otago. He was a member of the Otago Provincial Council, the Otago City Council and Parliament. As son of the province's first Superintendent, Cargill was elected Mayor of Dunedin in 1897–98 for the 50th anniversary of the founding of the settlement. According to the *NZ Dictionary of Biography* (1940), Edward Cargill 'was unwittingly the originator of the term, "Old Identity". Having in public utterance exhorted the original settlers to stand together to preserve their identity, he was made the butt of a joke by Thatcher, the comedian, who represented him as an "Old Identity".'

CARGILL, John

John Cargill (1821–98), one of Captain William Walter Cargill's seven sons, served in the Royal Navy as a young man, lived in Tasmania and Sydney, sailed commercially round the Pacific Islands, settled for a time as a tea planter in Ceylon, and then went to England to join his father aboard the *John Wickliffe* for the journey to Dunedin. He acquired sheep runs at Tokomairiro, Mt Smart, Teviot and Gladfield; married first the eldest daughter of Waikouaiti pioneer, Johnny Jones, and after her death a daughter of Dr Isaac Featherston, Superintendent of Wellington Province. John Cargill was an MP first for Dunedin Country Districts and then Bruce, and a member of the Otago Provincial Council. As if emulating his father's restlessness, Cargill returned to Britain in 1882 and settled in British Columbia five years later at the age of 66.

CARGILL, William Walter

William Walter Cargill (1784–1860) was born in Edinburgh and served for 17 years in the British Army, seeing action in India and the Peninsular War. He then became in succession a wine merchant in Edinburgh, general manager of the Yorkshire District Bank in Norwich, and a member of the board of the Oriental Banking Corporation in London. At the age of 64 Captain Cargill sailed as leader of the Free Church of Scotland colonists for Dunedin aboard the *John Wickliffe*. He became Superintendent of Otago when the province was constituted in 1853 (a post he held until 1860) and was MP for Dunedin Country Districts from 1855 to 1860.

Mt Cargill, a landmark and lookout point 8 km north-east of Dunedin City, was named after Captain Cargill.

CARP, European

European Carp (*Cyprinus carpio*) was introduced to NZ in the 1860s, but there is no evidence of its survival. Two species of Chinese carp were introduced in the 1980s. They are the grass carp (*Cteno-pharyngodon idella*) and silver carp (*Hypophthal-michthys molitrix*).

Goldfish (*Carassius auratus*) are found in many lakes and ponds in NZ, but the wild populations are unlike the domestic goldfish, whose characteristics are maintained by careful selective breeding and mating. Goldfish were possibly first introduced into NZ in the 1860s, under the name *Cyprinus carassius*, but there are no records of their liberation into streams, because these liberations were unofficial.

CARPET BEETLES

Carpet beetles belonging to two species are common NZ — the Australian carpet beetle (*Anthrenocerus australis*) and the varied carpet beetle (*Anthrenus verbasci*). They are both about 2.5 mm long and are similar in colour: black with a white pattern. Their common name is derived from the damage done to furs and woollen fabrics by the feeding of their larvae, damage often wrongly attributed to the caterpillars of moths. The larvae are quite different, short, stout and densely hairy in the case of the varied species, and long and thin with long hairs from the end of the body in the case of the Australian species.

The beetles themselves can be pests indoors as they lay their eggs on carpets, furniture upholstery, stored bed covers or clothing. They are strong fliers and often live outside feeding on pollen.

CARR, Edwin

Edwin Carr (1926–), one of NZ's greatest composers, was born in Auckland and was educated at Otago and Auckland universities, the Guildhall School of Music, London, and in Rome and Munich. He composed and taught in a variety of countries including Italy, Germany, England and Australia. Visits to NZ during his 35-year period overseas included tenure as Mozart Fellow at the University of Otago (1972–73). Carr's compositions, approachably modern in style and written for a range of traditional media, include four symphonies, sonatas for piano, violin and organ, two symphonic cantatas, five ballets, an opera in three acts, 'Nastasya', a one-act opera, 'Lord Arthur Saville's Crime' and a variety of orchestral, chamber, vocal and solo instrumental music. He returned to NZ to live in 1984.

CARRINGTON, Frederic Alonzo

Frederic Alonzo Carrington (1807–1901) was born in England and trained as a surveyor. After 14 years' experience in England and Wales, he was appointed chief surveyor to the Plymouth Company to select, purchase and survey the land for the settlement of New Plymouth. He completed the task successfully and went home to England in 1843. He then worked as a surveyor for British firms in California, Belgium and France, before returning to NZ in 1857. He was road engineer for Taranaki until he was elected Superintendent of the province in 1869, and became an MP the following year, serving until 1879.

A brother, **Wellington Carrington** (1814–90), was an assistant surveyor to the NZ Company, became a captain in the militia during the land wars in Taranaki, was a member of the Taranaki Provincial Council (1872–73), and was interpreter at the arrest of Te Whiti in 1881.

```

Sir James Carroll (1857–1926) was the son of Joseph Carroll (1815–99) and Tapuke, a member of the Wairoa hapu of the Ngati Kahungunu. Joseph settled in Wairoa as a farmer, importer of stock and machinery (mostly from New South Wales, where he had worked as a botanist with the government), and as a blacksmith and whaler.

Carroll had a thoroughly Maori upbringing. He spent his early life in the Ureweras and after several years at Thompson's School in Napier spoke little English, showed no aptitude for study and at the age of 12 returned to work on his father's farm at Wairoa. After serving with the government forces against Te Kooti, Carroll worked first for the Native Commissioner on the East Coast, then in the Native Office in Wellington. He became a licensed interpreter with the Native Land Court and with the House of Representatives. Carroll contested the Eastern Maori seat in 1883, lost, and then won it in 1887 at the age of 30. In 1894 he dropped Eastern Maori and won the Waiapu (later Gisborne) seat and held it for 25 years, serving as Native Minister from 1899 until 1912 and in other cabinet posts during the reign of the Liberals. He was acting prime minister in 1909 and 1911

Carroll was a man of great dignity, eloquent in both English and Maori. His mana among both Maori and Pakeha made him a symbol of Maori achievements and did much to enhance the respect for Maori among white settlers at a crucial time in the history of race relations in this country.

Carterton is a town in central Wairarapa, 14 km south-west from Masterton and 21 km north-east from Featherston. The first settlers in what was then called 'Three Mile Bush' were roading workers, linking Masterton and Greytown in the 1850s. On completion of the road, they cleared the bush for farms and named the town after a supporter of the Wairarapa Small Farms Association, Charles Rooking Carter. A town board was set up in 1875, a borough constituted in 1887, and the Carterton District Council was established in 1989. The town has a population of 5,300 and the council's region close to 8,000. Carter was born in England and worked as an actor and an artist and served an apprenticeship as a carpenter before emigrating in 1850 to NZ where he became a Wairarapa representative to the Wellington Provincial Council in 1859, the year Carterton was proclaimed a town and named after him. He later served as immigration officer for Wellington Province in London but returned to this country and wrote *Life and Recollections of a New Zealand Colonist*, a wordy autobiography that scrutinises the early politics of Wellington and the Wairarapa.

CASS, Thomas

Thomas Cass (1817–95) was born in Yorkshire and spent some years at sea before studying to be an architect and surveyor. He arrived in Auckland in 1841 (after being shipwrecked on the way), surveyed the North Shore of Auckland, and assisted in surveying the township of Kororareka and other northern settlements. He went back to England in 1847 and, in 1848, returned as a member of the surveying staff preparing for the Canterbury settlement. Cass became Chief Surveyor in Canterbury and a member of the Provincial Council.

Cassino, or more properly, Monte Cassino, in Italy, was the scene of a major battle fought by the NZ Division in World War Two — a battle surrounded by as much controversy as any other involving NZ troops in either of the world wars. The argument, concerning the bombing of the abbey on Monte Cassino, lingers to the present day. The battle was between German soldiers lodged at the top of the mountain and Allied soldiers trying to dislodge them and proceed up the leg of Italy to link with troops who had landed on the heads at Anzio. After two concerted attacks over a period of more than a month, the battle proved to be an expensive failure in terms of casualties.

The mountain commanded the route to Rome along the Liri Valley and after several American assaults had failed to capture the high ground, a temporary NZ Corps was formed in February 1944 under General Freyberg, within the command of the Fifth Army, and incorporating the Fourth Indian Division and an American group (four tank battalions, two tank destroyer battalions, four companies of engineers and four battalions of field artillery).

The abbey on the brow of Monte Cassino was established about AD 529 by St Benedict, founder of the Benedictine Order. It was in this place and for this abbey that he wrote the Rule that founded monasticism, then an eastern tradition, in the Christian west. The black-robed Benedictines had helped preserve the highest traditions of Greek and Roman civilisation during the Dark Ages and many priceless cultural treasures were preserved there.

Freyberg's opinion was that the monastery should be bombed because he did not want any of the lives under his command to be at risk as a result of German occupation of the buildings or the ground nearby, either for active fighting defence or for observation which would help the defenders.

Field Marshal Alexander accepted the bombing should take place if Freyberg considered it a military necessity. The Commander of the Fifth Army, American General Mark Clark, opposed it on the grounds that it was unnecessary and also that the rubble from bombing would handicap attackers moving in afterwards. But, according to the official *NZ War History* by N C Phillips, Clark's chief of staff, General Gruenther, on the evening of 12 February, 'telephoned Freyberg with the decision that, if in Freyberg's considered opinion the abbey was a military objective, the Army Commander would concur and authorise the bombing.'

On 15 February, the monastery was left a smoking ruin after 143 Flying Fortresses and then 112 medium bombers dropped 576 tonnes of high explosive on or near the buildings. It was bombed again on the 17th. This destruction has since been described as an act of wanton terror and vandalism, and there is no doubt that the rubble did impede attackers who sought to capture the mountain for the Allies.

Immediately after the bombing, the Indians in the NZ Corps got within 300 metres of the abbey ruins and two Maori companies captured the railway station. But engineers could not adequately repair the road and bridge the Rapido River during the night and left the 200 Maori infantrymen exposed to German counter-attack during the day of the 18th. Late in the afternoon, they were forced to withdraw as tanks moved into the railway station. Without anti-tank guns, they had either to retreat or be overrun. More than 20 were killed, 80 wounded and 24 missing or taken prisoner. The Germans had won the railway station back — but at a high price; they lost 19 killed, 102 wounded and 18 prisoners.

On 15 March, the second and major assault on Monte Cassino began, following another massive bombing attack and prolonged shelling. By the 20th, both the Second NZ Division and the Fourth Indian had fought themselves out without being able to dislodge the Germans from the defensive rubble around the area. On the 23rd the decision was made to hold the line where they were until fresh troops under a new command could take over. The withdrawal took place over three days from the night of the 25th.

The fighting for Cassino cost 460 NZ lives, 1,801 wounded and 50 prisoners (seven of them wounded).

The argument on the bombing of the monastery has continued since. In 1984, Americans David Hapgood and David Richardson, in their book, *Monte Cassino*, telling what they called ‘the great untold story of World War Two’, put the blame squarely on Freyberg, even though Mark Clark and other Allied commanders had either supported the decision to bomb or at least had acquiesced.

The authors said the senior commanders agreed because they thought that if the monastery was not bombed and the NZ Corps failed with heavy casualties in their bid to capture Cassino, the NZ government might pull its troops back home and cause enormous political embarrassment to the Allied cause.

CASTLE, Leonard Ramsay

Leonard Ramsay Castle (1924–) is a master potter, one of NZ's top craftsmen. Born at Auckland and educated at Mt Albert grammar and Auckland University, he studied under Bernard Leach in England in 1956–57. He later studied in Japan and the US. Castle is one of the pioneers of NZ stoneware, and the first here to make high temperature wares in the Leach-Hamada tradition.

CASTLEPOINT

}
```

Castlepoint, a small holiday settlement on the Wairarapa coast, 73 km by road east of Masterton, is surrounded by land underlain by sequences of alternating beds of sandstone and mudstone of early Miocene age, 24 to 16 million years ago. These beds are very well exposed along the coast of Whakatakai, 6 km north of Castlepoint. Erosion of these beds has produced a diversified topography of hills and valleys.

A prominent white-coloured headland dominates the coastline to the south-west. Named 'The Castle' by Captain Cook, the headland is 162 m high and has very steep to sheer sides. Its base is littered with numerous large blocks of rock that have fallen from its flanks. Adjacent is 'The Reef', a low linear rock feature rising to 50 m above sea level at its northern end where a lighthouse is situated. The Reef is linked to the mainland by a sand spit, covered by high spring tides, and encloses a small harbour, surrounded by narrow rock benches.

Fossils are plentiful in the rocks of both The Castle and The Reef. A scallop (*Chlamys delicatula*), is often very prominent in the fossil beds. This scallop now lives south of Stewart Island and its presence at Castlepoint and extending northwards to northern Hawke's Bay is an indication of the amount of cooling of the coastal waters of NZ that occurred in the early stages of the Ice Age (or Pleistocene period).

CATLINS

```

Catlins is a name applied to the area between the Catlins and Tahakopa Rivers and, by extension, is frequently used to describe the south-eastern Otago coast and immediate hinterland between Nugget Point and Chaslands Mistake. The coastal area is a rewarding region for geology students. The name comes from Edward Cattlin (as he spelt it) who surveyed the Clutha River in 1840.

The Catlins coast shows a magnificent cross-section through some of the most fossiliferous Mesozoic rocks in NZ. The rocks, ranging in age from early Triassic (230 million years ago) to middle Jurassic (17–175 million years ago) are folded into a broad, roughly U-shaped fold called a syncline — in this case the Southland Syncline. It can be traced in an arc across south-eastern Otago and Southland.

The rocks of the Catlins contain many bands rich in fossils. Brachiopods (lamp shells), bivalves (clams), gastropods (whelks) and bryozoa (lace coral) are numerous. Less abundant are ammonites (sea snails) and belemnites (extinct squids).

Included in the region is **Catlins Forest Park**, established in 1975. It covers 60,000 ha of rolling hills and broken tablelands and embraces ten state forests, all of which are largely untouched by fire, animals or glacial action. They contain mainly rimu and kamahj, with rata at high altitudes, but Maclennan and Tautuku Forests both contain less common bog forest types, and there is a pure stand of silver beech in the Maclennan Valley that extends into the Catlins River area. The river flows through the park on its way from the hill country south-west of the Clutha River into the Pacific Ocean, south of Nugget Point.

```

Cawthron Institute was for many years the only major, privately endowed research institution in NZ, established in 1920 with a £240 000 bequest from Nelson businessman Thomas Cawthron (1833–1915).

Cawthron was born in Surrey, England, and came to NZ at the age of 15 with his family to farm at Richmond. He spent several years on the goldfields at Bendigo and Ballarat, returned to Nelson and amassed a fortune as a shrewd merchant and shipping agent. He was a generous benefactor to Nelson while he was alive and left almost all his money for the formation of the Cawthron Institute in the city when he died.

The work of the institute was originally organised in three scientific departments involving the control of insect pests, of fungus diseases, and agricultural chemical research. A technological museum was also established. After 20 years the agricultural chemicals department was further divided into one section that dealt with soils and agriculture and another that dealt with biochemistry.

CENSORSHIP

Censorship of books, films and television programmes in NZ settled into a pattern, after the early 1960s, which appeared generally to satisfy citizens until the end of the 1980s, when some concern arose over the content of videos for private showing.

For most of NZ's history, censorship was left to the Customs Department in association with the police, with ultimate resort to the courts. The publication of obscene writing was a common law offence until 1893, when it became statutory.

The Indecent Publications Act of 1910 laid down considerations for courts, including whether a work had literary or artistic merit, but the determination of indecency was still left to the courts and a decision could only be given on criminal prosecution or seizure proceedings.

The Indecent Publications Act of 1963 set up an independent tribunal with the power to rule publications as indecent for the public in general, or to approve its use for persons over a certain age level, or for specified groups or purposes. There was provision for appeal to the High Court.

Film Censorship began in 1916 following agitation from as early as 1911, and the present system evolved through legislative changes in 1926 (to control film posters as well), 1928, 1956 and 1983. A Video Recordings Act 1987 provided for video censorship.

All previous legislation was superseded by the Films Videos and Publications Classification Act of 1993 following an 1989 Committee of Inquiry into Pornography. The new legislation set up an Office of Film and Literature Classification responsible for all printed and visual material. The Chief Censor and Deputy Chief Censor are appointed on the joint recommendation of the Ministers of Justice, Internal Affairs and Women's Affairs. Film and videos must be submitted to an Industry Labelling Body appointed by the Ministry of Internal Affairs. It rates the material, mainly on the basis of foreign classifications, and may refer it to the classification office for enforceable restrictions.

Other materials — printed works, video games, sound recordings, computer bulletin boards may be submitted to the classifications office by public complaint, by Customs or at the request of the Chief Censor. Classifications may include restrictions on age, on place of sale and even type of packaging. Where material is officially 'objectionable', such as that depicting paedophilia, coprophilia and torture, its possession constitutes an offence.

A Board of Review appointed by the Minister of Internal Affairs may hear objections to classifications from the public or distributors. The Department of Internal Affairs has a special unit which provides information on censorship policy and practice.

CENSUS

Census figures on population and dwellings, covering a wide range of personal, professional and family data, are collected every five years. The data is collected compulsorily and confidentially by the government. Intercensal population statistics are based on the figures from the previous census adjusted by births, deaths and migration.

In 1978–79 the department conducted the first of a series of five-yearly integrated economic censuses covering the nine major divisions of the NZ Standard Industrial Classification which is based on the 1968 United Nations International Standard Industrial Classification of All Economic Activities. (See Population.)

CENTRAL PLATEAU

(see Regional Geography)

CER

CER, an acronym for Closer Economic Relations which, in turn, is a contraction of the Australia NZ Closer Economic Relations Trade Agreement, came into existence on January 1 1983 and has gradually moved both countries towards free trade across the Tasman Sea.

Its immediate predecessor was NAFTA, the NZ-Australia Free Trade Agreement, which was signed in 1965, but did not have a mechanism for automatically improving access conditions by the removal of quantitative controls. Without a time-table and with changes negotiable on a regular basis, constant pressure was brought on each government by its lobbying groups. So the two countries — weary of the patchwork of arrangements which gave no permanence to sector agreements — decided in the opening years of the 1980s to prepare a treaty which would provide for the gradual but inexorable dismantling of barriers to free trade.

The treaty provided for the removal of all performance-based export incentives and any import duties by the end of 1987, and the progressive liberalisation of all quantitative restrictions by 1995, but a meeting in 1988 pulled back the deadline for the removal of quantitative trade barriers to the early 1990s. Most were achieved, but some problems and delays involved financial sector restrictions. Some few products have been subject to modified agreements over a longer period, and special voluntary industry arrangements were made to cover some agricultural products.

CER hugely stimulated trans-Tasman trade over the first few years with exports to Australia almost doubling between 1983 and 1985, and exports to NZ increasing by 30 per cent over the same period. Growth has continued steadily.

CHAFFINCH

(*see* Finches and Buntings)

CHAMBERS OF COMMERCE

Chambers of Commerce have existed in NZ since the first two were founded in Auckland and Wellington in 1861. Chambers started up in most major provincial towns, particularly the ports, during the 20th century. They represented all commercial sectors within a city and region with the aim, expressed by a former general secretary of the Associated Chambers of Commerce of NZ, of advancing the interest of a chamber's town or city; encouraging its development and prosperity; improving and extending its trade facilities; encouraging the growth of local industry; and making its area healthy in the field of business, and culturally and educationally progressive. A chamber is a clearing house of commercial thought and opinion, giving general service to the commercial and industrial community as a whole and individual service to its own members. About 35 chambers exist throughout the country, with the Auckland Regional Chamber of Commerce and Industry the most powerful.

The Associated Chambers of Commerce was the national organisation to which the local chambers were affiliated, but it is now defunct. Chambers have generally been less effective as a lobby group in recent years than the more sectional organisations like the Employers' Association or the Manufacturers' Federation. There is a branch in NZ of the American Chamber of Commerce, members being drawn from American companies with a presence in NZ and NZ companies with a presence in the US.

Chamois (*Rupicapra rupicapra*) live in the sub-alpine country of the Southern Alps and have been particularly plentiful at times during the past 40 years. A European antelope, the first chamois were released in the Mt Cook area in 1907, and again in 1913. In summer they feed on the open tussock land just below the snowfields, but in autumn and winter are found down in the high reaches of the forest. They have been heavily culled by amateur and professional hunters over the years.

CHAPMAN, Sir Frederick Revans

```

Sir Frederick Revans Chapman (1849–1936), the son of Henry Samuel Chapman, was born in Wellington, educated in Australia, France, Germany and Italy, and was called to the Bar at the Inner Temple in London in 1871. On his return to NZ, he practised as a lawyer in Dunedin. He became an eminent jurist as a Supreme Court judge and was President of the Court of Industrial Arbitration from 1903 to 1907.

Chapman was also a member of the Otago Institute, the Wellington Philosophical Society, the Polynesian Society and the Geographic Board and wrote widely on historical and geographical matters, including such notable papers as *Maori Methods of Working Greenstone* and *Moa Remains in the Mackenzie Country*.

CHAPMAN, Henry Samuel

Henry Samuel Chapman (1803–81), father of Sir Frederick Revans Chapman, settled in Canada as a merchant for ten years, and then returned to London and qualified as a lawyer at the age of 37. According to the *NZ Dictionary of Biography* (1940), Chapman wrote an article for the *Encyclopaedia Britannica* and, noticing that no entry had been made for NZ, was commissioned to write it himself. The entry had to go under the letter Z because entries under N were already set. Afterwards he edited the *NZ Journal* in London.

Chapman was a Supreme Court judge for the southern division (including Nelson and Wellington), then lived in England and Melbourne for ten years before reappointment to the Bench in NZ. He spent the rest of his life in Dunedin.

CHARLES, Robert James

Robert James Charles (Bob) (1936–), NZ's most successful international golf professional, was born at Carterton, won the NZ Golf Open in 1954 (aged 18), and until he turned professional in 1960, represented NZ as an amateur both at home and abroad on a number of occasions. Charles established himself as the best-known left-handed golfer in the world and his most successful year was 1963 when he won the British Open at Royal Lytham and St Anne's. He has played on the American professional circuit, with success that increased as he got older. He was still winning tournaments on the US Senior circuit by the mid-1990s.

Charolais cattle, originally from the Charolles district in central France and dating back to the 16th century, were first introduced to NZ in the 1960s from Britain. They have become established as a major beef breed, used mainly as terminal sires over Angus and Hereford cows and by dairy farmers over Friesian and Jersey cows to get a beef animal surplus from dairy herd replacements.

Charolais semen was imported for trials at Ruakura by the Ministry of Agriculture and Fisheries and, at the same time, in 1966, a Waimate farmer, J M Sutherland, was allowed to import semen for commercial use. In 1980 polled American Charolais were imported from North America.

Chateau Tongariro is a locality on the lower slopes of Mt Ruapehu, originally known as Whakapapa, but often called just 'The Chateau', since the first chateau-type tourist hotel was opened there in 1929. The hotel, with adjacent chalets, a motor camp and holiday cabins is used mostly by skiers, but is also the headquarters for visitors using the Tongariro National Park for a range of sightseeing and recreational activities. It is 18 km west of the railway station at National Park.

CHATHAM ISLANDS

}
```

Chatham Islands are 860 km east of Christchurch (Lat 44° S, Long 176° W). The first European to discover the islands in 1791 was Lieutenant William Broughton who named them after the ship in which he was sailing to Tahiti. There are three main islands in the group — Chatham (90,000 ha), Pitt (6,190 ha) and South-East (260 ha). Around them are a number of smaller islands and hundreds of rocks emerging from the sea. Almost a quarter of the main island is covered by shallow lagoons, the largest of them called Te Whanga. The land carries predominantly fern and pasture with some karaka and nikau palms.

The islands are windswept, cold and wet with a prevailing south-westerly wind, an average annual temperature of around 11°C and a rainfall average of around 750 mm in Waitangi (rising to more than 1,200 mm on the high ground to the south-west). The islands' economy is based on sheep farming and fishing. A crayfishing boom peaked in the early 1970s but has now settled down into a solid industry with processing factories on Chatham.

The main settlement is Waitangi, in Petre Bay, on the western side of Chatham. The population of the Chathams is less than a thousand. The original settlers in the Chatham group were Maori originally from mainland NZ and known as Moriori. For several centuries they were among the world's most isolated people, limited in their ability to venture into the ocean because of the lack of trees on the islands. They were decimated by an invasion from the NZ mainland in 1835 by a Ngati-Mutunga force led by Wiremu Piti Pomare.

Chatham Rise is a submarine shelf running eastward from Banks Peninsula to more than 160 km beyond the Chatham Islands. Its depth is between 100 and 300 fathoms, except for peaks up to 28 fathoms beneath the surface.

CHEESEMAN, Thomas Frederic

Thomas Frederic Cheeseman (1846–1923) was born in Yorkshire and came to NZ with his father at the age of eight. He began farming, but a passionate interest in natural history led to his appointment as secretary of the Auckland Institute in 1874 and curator of the Auckland Museum. Though he regarded himself primarily as a botanist, about a quarter of the 101 papers he wrote for scientific publications were on ethnology and zoology. Cheeseman investigated flora in other parts of Polynesia but his most notable publications are *Manual of NZ Flora* (1906) and *Illustrations of the NZ Flora* (1914) with Dr W B Helmsley. He became President of the NZ Institute in 1911 and a fellow in 1919.

Mt Cheeseman (2,006 m) in the Craigieburn Range in Central Canterbury is named after him.

Chess is widely played casually among NZers and clubs have a wider spread and larger membership than most people would suspect. In the mid-1980s, there were 83 clubs throughout the country affiliated to the NZ Chess Association (including business house clubs) with a total of 1800 members. Membership has declined since then. The national association is affiliated to the international governing body, the FIDE.

The game was first played in NZ on an organised basis after the formation of the Dunedin Chess Club in September 1863, the first in the colony.

A number of clubs sprang up in the more well-established settlements during the following decade. The first interclub match, between Dunedin and Christchurch, was played in 1869. The association was founded in the 1870s but lapsed after some years and was re-formed in 1892. The first national chess championship was conducted in 1879, and was won by Harry Hookham.

The fact that it was not until the following year that the first national chess championship of Scotland was held emphasises how early the game got off to an organised start in this country. The 'Silver Rook', now also named the Robert Jones Championship Chess Trophy, is the oldest national trophy still being contested anywhere in the world.

During the 1940s, the best native-born player was R G Wade who won the national title in 1943–44, 1944–45 and 1947–48. In 1948 he went to England, winning the British chess championship more than once during the 1950s. He became an International Master (IM) of the International Chess Federation, NZ's first.

After Wade, the leading NZ player was Ortvín Sarapu, also an IM, an Estonian by birth, who came here in 1950, became a naturalised NZer and first won the national title at Napier in 1951–52 with ten wins and one draw. A young man from Wainuiomata, Wellington, has in recent years shown he is the best NZ-born player yet. He is Murray Chandler who left home in the 1970s, played a large number of tournaments in Britain and Europe, becoming an IM and, in 1984, became a Grand Master, a first for NZ. Chandler has ranked 16th among the hundreds of names in world listings.

Organised chess by correspondence has been played in NZ since about 1935, at first under the auspices of the British Correspondence Chess Association. But a NZ Correspondence Chess Association was formed in 1983 with 60 members throughout the country and has operated successfully since.

Cheviot sheep were introduced to NZ in 1845 from the Scottish Highlands and the borderlands between England and Scotland where they have grazed for centuries. They have a reputation for being able to survive on sparse pasture in very cold conditions. The breed quickly established itself in Otago, Southland and the central North Island and remained very popular throughout the 19th century. In the first half of the 20th century, its popularity declined because of its light fleece weight and difficulties in mustering, but it later made a comeback for use in crossing with Romneys, giving improved growth rates, hardier sheep and easier mustering on hill country. The Perendale has been fixed from the Cheviot/Romney cross.

The Cheviot is a compact, short-legged sheep with white face and legs free of wool and a body weight between 40 kg and 50 kg. It has only recently been bred free of horns. Its wool is between 28 and 33 microns in diameter which, because of its bulk and resilience, is used in carpets, knitwear and tweeds.

The township of Cheviot in North Canterbury, 115 km north-east from Christchurch, was named after a sheep run, 'Cheviot Hills', established in the area and then cut up for closer settlement by the Minister of Lands, Sir John McKenzie, in 1893. Cheviot Hills had been named after the range on the Scotland-England border from which the Cheviot sheep were imported. The township was first named 'McKenzie' in honour of the man who subdivided the area but in the end Cheviot prevailed.

CHEW CHONG

```

}
```

Chew Chong (1830–1920) was born in China and worked in English households in Singapore. He spent 11 years as a goldminer and storekeeper in Victoria, two years on the Otago goldfields, and then became a pedlar, merchant and exporter in Taranaki. In 1868 he began collecting an edible white fungus he found in NZ forests, especially on mahoe trees, and which he recognised as something the Chinese regarded as a delicacy: it became known as ‘Taranaki wool’. Collecting and selling Taranaki wool to Chew Chong for fourpence a pound became a boon for hard-up Taranaki dairy farmers and their children and the exports earned NZ about £300,000 over 30 years.

Chew Chong was a far-sighted entrepreneur. He opened a store in New Plymouth and branches in Eltham and Inglewood, milked cows, opened a dairy factory at Eltham, lost money attempting to export dairy produce to Australia and Britain, imported the first cream separator into NZ, and established a box factory.

CHEWINGS FESCUE

(see Lumsden)

CHIANINA CATTLE

Chianina cattle arrived in NZ during a new surge of imports of foreign breeds in the mid-1970s. The very tall, white beef animals come from the Chianina Valley in the Province of Tuscany, where they were valued for their meat and their strength as draught cattle in Roman times.

CHILD WELFARE

Social Welfare Department

Working with Families

Child Welfare is a term which embraced a modern attitude of social responsibility towards the raising of children. The Child Welfare Act of October 1925 made provision for the maintenance, care and control of children who were under the protection of the state, and it provided generally for the protection and training of indigent, neglected or delinquent children. It repealed the Industrial Schools Act of 1908 and its 1909 amendment, and it made a few amendments to the Infants Act, 1908.

The 1925 Act established the Child Welfare branch of the Department of Education and provided for the Minister of Education to establish receiving homes, probation homes, training farms and training schools, convalescent homes and other institutions for the purposes of Child Welfare work.

Children (defined as under the age of 16) could be committed to an institution by a magistrate or justice exercising jurisdiction in a Children's Court; the Act devoted one of its parts to the proceedings and powers of this court.

In addition to maintaining and training destitute, neglected and delinquent children, the Child Welfare branch provided for:

- (1) the training of all afflicted children (deaf and feeble-minded) who could not stay in their own homes and attend special day classes
- (2) investigation of the conduct, family history and home conditions of all children brought under the notice of the courts, or young persons charged with offences
- (3) investigation of all applications for the adoption of children
- (4) preliminary investigation in regard to the suitability and bona fides of applicants for widows' pensions
- (5) supervision by experienced female officers of all children under the age of six years who were maintained apart from parents or guardians
- (6) oversight of all young offenders who were placed under supervision by the courts
- (7) the care of all illegitimate infants
- (8) social readjustment in the early stages of any cases brought under notice.

During the decade immediately following World War Two there was a serious increase in the number of children committed to the care of Child Welfare or placed under the supervision of Child Welfare officers. Children were breaking and entering, stealing and receiving, converting cars, forging and making false pretences, and driving dangerously.

In September 1954, a Special Committee on Moral Delinquency in Children and Adolescents (chairman, Dr O C Mazengarb) submitted its report and recommendations to the House of Representatives which, in September 1955, made recommendations relating to comics and magazines, the standard of broadcasts for children, an increase in the number of visiting teachers, school psychologists, police women and public health nurses, and the retention of

Child Welfare as a division of the Department of Education.

By the beginning of 1964, there were 29 district offices staffed by 229 Child Welfare officers (not including teachers, clerical and ancillary staff); 12 short-stay institutions, three longer-term institutions for the training of more seriously difficult and delinquent children; five residential special schools (two for those handicapped by deafness, two for mentally backward, and one of the emotionally maladjusted); and a hostel for working girls. There were 12,499 children under the control and supervision of Child Welfare. The figures relating to Children's Court appearances were the highest so far recorded, with a rate of 71 per 1,000 of the child population aged seven to 17 years; on an average one 16-year-old in every 22 made a court appearance for some offence; and out of every 1,000 European women aged 18 years, 20 gave birth to illegitimate babies — in 1951 the figure had been ten.

CHILD WELFARE - Social Welfare Department

The National Government set up the Department of Social Welfare in 1972 and the Child Welfare Division went out of existence. The social work of the new department included the care, protection and control of certain children and young persons aged 17 years and under, as well as counselling work on behalf of the mentally and physically disabled, solo parents and their children, and the aged. The rapid increase in the number of young offenders continued and was by now increasing at a greater rate than the country's population.

The Labour Government was responsible for the Children and Young Persons Act of 1974 under which 'children' are under 14 years and 'young persons' are aged 14 to 17 years. The word 'delinquent' was banished. The Children's Courts were restructured as Children and Young Persons Courts, but complaints relating to the younger age group were to go first to Children's Boards where it was hoped many families would be assisted in an informal setting instead of a court.

CHILD WELFARE - Working with Families

The NZ Children and Young Persons Service was set up by the Children, Young Persons and Their Families Act 1989 and the full range of services are also provided under the Guardianship Act 1968, the Family Proceedings Act 1980, the Immigration Act 1987 and other legislation. The philosophy nowadays is to work with families to ensure the adequate care and protection of children. The service:

- Provides information and referral services to children, young persons and individual adults and families.
- Investigates child abuse.
- Assesses the risk and need for care and protection and provides support services where needed.
- Provides reports and supporting information to courts.
- Arranges guardianship and custody services.

Charles Chilton (1860–1929) was born in England, came to NZ at the age of one with his parents, who settled on a farm in North Canterbury, and became the most versatile scholar of his time. He was educated at West Christchurch District School where he became a pupil teacher. He entered Canterbury College in 1875 as an unmatriculated student, gained his BA in 1880, his MA with first class honours in zoology in 1881 and in 1887 took his BSc at the University of Otago, the first BSc graduate in NZ. While teaching in Dunedin, he continued studying and in 1893 became the first NZ student to gain a doctorate in science.

In 1895 Chilton began medical studies at Edinburgh and gained his MB and CM with honours and was also awarded a scholarship which enabled him to become an ear, nose and throat specialist. In 1900 he studied diseases of the eye at Heidelberg, Vienna and London and in 1901 returned to Christchurch to practise as an ophthalmic surgeon. He then occupied the chair of biology and palaeontology at Canterbury University and from 1910 to 1928 just the chair of biology.

In 1921 Chilton was appointed rector of Canterbury University College. He was regarded not only as an extraordinary scholar but as a warm and effective teacher of young people.

```

Christchurch is the centre of the third most populous urban area in NZ (after Auckland and Wellington) with about 310,000 people. It is situated on the Canterbury Plains, at the northern end of the Port Hills which separate the city from its major seaport, Lyttelton Harbour, 11 km away by rail and road tunnels. The city has the lowest annual rainfall of the four main centres (averaging 658 mm), the greatest range of temperature (from a mean winter daily minimum of 1°C in July to a summer daily maximum of 22°C), and a nor'-wester in summer that can create drought conditions and temperatures up to 32°C.

Soon after organised settlement in 1850 Christchurch began to prosper as the market town for the Canterbury Plains, the most immediately adaptable and most readily developed region for pastoral farming. Sheep farming flourished early on the country's largest area of natural pasture, and as the settlers prospered they became strongly innovative. Today sheep farming, mixed farming and horticulture are still the basis of the city's wealth, and dairying is growing with an expansion of irrigation systems. A strong secondary industry has developed with the emphasis on heavy engineering (which has a long tradition in the town) and chemical and rubber manufacturing.

Christchurch, at the confluence of the Avon and Heathcote Rivers, is known as the most English of NZ cities for historical reasons. The site was considered by the Free Church of Scotland group but they chose Dunedin on the advice of the surveyor, Frederick Tuckett, because some of the land was swampy, because access from Port Cooper (later Lyttelton Harbour) was difficult over the Port Hills, and because timber was less abundant than in other parts of the country.

The first Europeans to establish themselves in the region were William and John Deans, Scottish brothers, who had earlier immigrated to other NZ settlements — William to Wellington in 1840 and John to Nelson in 1842. In 1843 they settled at Riccarton (which they named after their home town near Kilmarnock in Scotland) with other immigrants, the Gebbies, Mansons, Hays and Sinclairs. They became successful and self-sufficient farmers, exporting dairy produce to Wellington and even Sydney.

The major settlement occurred in 1850 when the Canterbury Association, organised by John Robert Godley and Edward Gibbon Wakefield, sent its first immigrants from England, on the *Lady Nugent* (arriving in April), and the *Charlotte Jane*, *Randolph*, *Sir George Seymour* and *Cressy* (all arriving in December). A surveyor, Captain Joseph Thomas, had chosen the site and, with surveyor Edward Jollie, had mapped streets and subdivisions from 1848 onwards. The settlement was basically an attempt to recreate an idealised English society, complete with an official 'Anglican Church'. The idealisation faded quickly in the face of the hard reality of colonial life and the Canterbury Association was disbanded in 1855; but the

Englishness remains, partly as a result of the city's layout, with a Gothic-style stone Anglican cathedral (begun in 1864 and completed in 1901) dominating a central square.

Christchurch was named by Godley after his old university college at Oxford, Christ Church. Known as the 'Garden City', Christchurch fully justifies this description with an eighth of its area given over to public parks, reserves and recreation grounds. Hagley Park, 186 ha of parkland in the centre of the city, is the city's most popular sports area, and the site of the Botanic Gardens (established in 1864).

CHURCH, Doris

Doris Church (1940–) founded NZ's first battered women's support group and has since worked constantly to educate the public on domestic violence. As a teacher of disturbed adolescents, she surveyed 200 preschool day-care placements in 1974, publicising bad conditions then existing in many child care centres.

She was herself a battered wife; after she left her first husband, the *Christchurch Press* published her story, and many other battered women contacted the paper asking for help.

Dr John Church, an educational psychologist and her second husband, became involved through his work with battered children; after his marriage to Doris he wrote *How to Get Out of Your Marriage Alive*.

CHURCH, Hubert

Hubert Church (1857–1932) was born in Tasmania and educated in England and Blenheim, NZ. He was a Treasury official in the NZ public service for 33 years, and wrote and published verse: *West Wind* (1902), *Poems* (1904) and *Egmont Poems* (1908), which are seldom anthologised now, but the Hubert Church Memorial Prize, funded by his estate, was for 40 years NZ's most prestigious literary prize.

CHURCHES OF CHRIST
