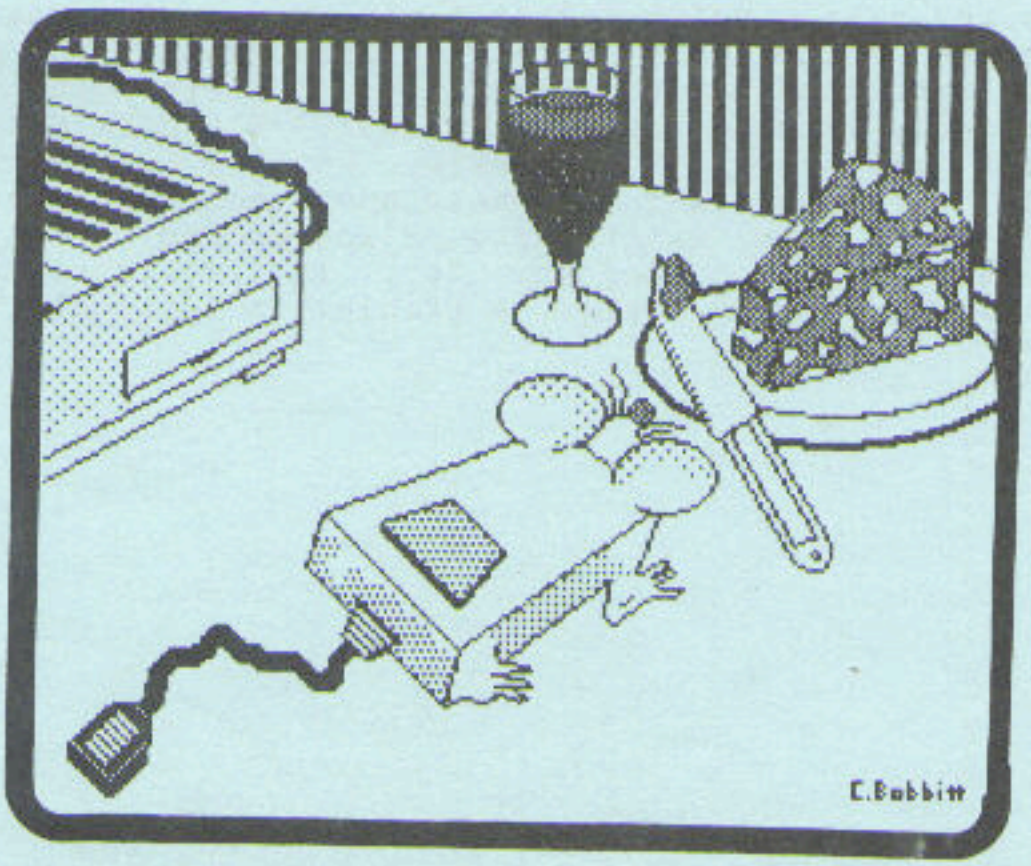
DISK DATA BASE

Today there are more programs available for the TI-99/4A than ever before. There are so many that yesterday's best disk cataloging programs just can't keep up. How many user's groups and individuals around the world can boast libraries in the thousands? The numbers are staggering, and until DISK DATA BASE, there was no way of easily keeping track of such an enormous amount of data. DISK DATA BASE is the only program you will ever need for organizing your disk library. Whether you have 100 or 10,000 files in your collection (DDB will store a catalog of up to 12,000 files on a single DSDD disk!), DISK DATA BASE is your tool for organization. DISK DATA BASE has more features than any of it's ancient competitors. With DDB you can now sort and print out your catalog by either diskname or filename,, print it out unsorted, or selectively print out all entries that contain a string you enter (for instance, you can have it print out all your files named "LOAD"). You can also break up your catalog into blocks of 250 entries for easy management - no longer will you have to print out parts of a catalog you don't need. You can even convert data files from Master Disk File to DDB's data format, so your investment in time is saved! DISK DATA BASE features assembly language routines for speedy sorts and snappy screens, a helpful on-line dictionary of terms for when you are confused, numerous prompts in English, and more ease-of-use than you can shake a stick at. Even if you only have a small collection, DDB is the program for you. Not only will it let you be organized from the start, DDB will also let you expand database files to fill new disk capacity. So if you upgrade your disk drives or controller, DDB will let you easily enlarge your database disk so it can handle a larger catalog. A more flexible program for maintaining your program collection doesn't exist! DISK DATA BASE requires Extended BASIC, a 32K memory expansion unit, and a disk drive and controller. A printer and second drive are recommended, but not required. DISK DATA BASE is an excellent value at $15 - not only does it include 3 disks and a eight page manual, it also comes unprotected so you can legally back up your investment. No data monster is too large to be tamed by DDB, so isn't it time you tamed yours?

GRAPHX Companion I & II

GRAPHX Companion is a revolutionary new addition to that most revolutionary graphics system known as GRAPHX. This two-disk package is a complete collection of clipart, fonts, pictures and new animation sequences for use with GRAPHX. No longer will you have to design by hand new works for your personal or commercial needs - GRAPHX Companion I, and it's second volume GRAPHX Companion II, both provide you with a completely unique library of material. Enhance and decorate your existing art works as well. User's may freely incorporate these works within their own as long as notice is provided to their origin. GRAPHX Companion I and II together are the tools that the casual or business user will need in order to get the most from GRAPHX. Each of these high quality packages has the extraordinary suggested retail price of only $7.00! GRAPHX requires the Extended BASIC, Editor/Assembler or Mini-Memory modules, 32K and a disk system. An Epson compatible printer is recommended. Our GRAPHX Companions require GRAPHX.



SCHEDULE MANAGER

Software that truly meets the needs of the productive worker (businessperson, office employee, homemaker, student, etc.) is as scarce as hens teeth for the TI-99/4A user. The catagory of software that lets the user perform a task on a computer easier then by hand is almost nonexistant with the exception of a few word-processors, spreadsheets, database programs and utilities. That's why we at Asgard Software are particularly proud to introduce to you the newest addition to this very short list, Schedule Manager. Schedule Manager's capabilities are impressive. It sports three major functions, that of a large appointment book, a useful calendar and a handy notebook. All are integrated to a degree rarely seen in TI-99/4A programs. For example, data from one function can be passed to the others with a single command, or automatically in some cases. Such power is not otherwise available on programs costing less then $250. Of course power isn't everything, if a program is too difficult to use it doesn't matter how powerful it is. That's why we made Schedule Manager about the easiest to use 99/4A program in existance. It features complete pull-down menues and interactive windows like the Apple Macintosh (tm), a powerful and extensive "HELP!" utility for whenever you need a quick definition, and numerous prompts in English which mean what they say, and much more. Asgard Software didn't leave out usefulness either. The program has over 16 menu options for easily using and maintaining your information, a full-screen editor for entering data quickly and easily, multiple appointment book capability, complete print options and assembly language speed. Overall, Schedule Manager is excellent for keeping a weekly, monthly or quarterly schedule, keeping lists of names and numbers (among other things), and even maintaining a log of expenses. It's a worthwhile investment for any user. It requires Extended BASIC, 32K and a disk system. A printer is optional.

Screen Scroll Package

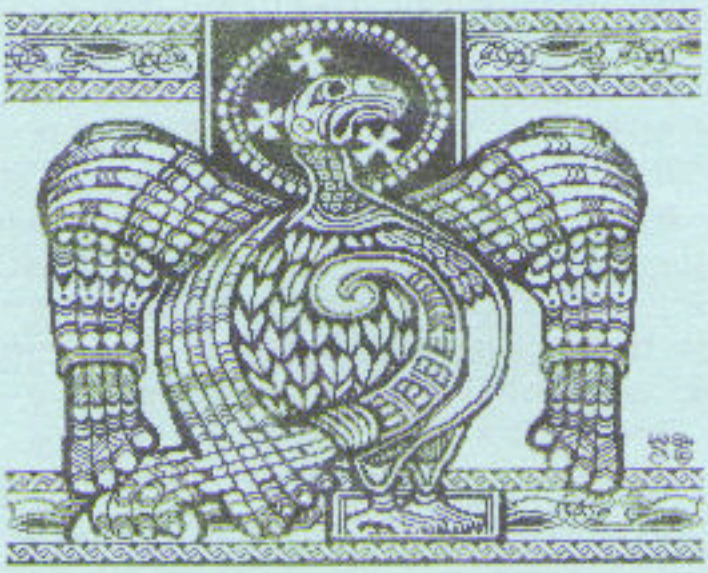
The Screen Scroll Package is ideal for the casual or serious Extended BASIC programmer that wants to add some of the power, speed and pizzazz of assembly language to their programs without having to learn assembly. This comprehensive package contains 11 dedicated scrolling routines and numerous other miscellaneous routines that cmbine power and total ease-of-use. Each of the scroll routines is fully documented and the assembly source code for each is provided, while demonstration programs are given for all of the routines in this package. These routines lend themselves readily to business, game and utility applications. Requires Extended BASIC, 32K, and a disk system.

STAMP MANAGER

Stamp Manager is the ultimate organizing tool for the serious stamp collector! This remarkable program is the answer to the long hours of tedium required to maintain a complete catalog of your stamp collection by hand. This program won't take the work out of it - nothing will (and no one should trust anyone that says otherwise)! However it does accomplish the task much quicker. Tests have shown that an experianced user of this program can finish up to four times faster then one doing it with pencil and paper. Plus, once the data is entered into the program it can be easily updated, and printed out over and over again! Moreover, this is a complete organizing tool - the program can sort your data by Scott Number, quantity, value, date purchased or by condition with assembly language speed. Stamp Manager is also flexible - it can accomodate any printer and utilize any special features. It is easy-to-use with pull-down menues and prompts in English and not computer-ese. It comes complete with a full manual explaining every feature and function. Requires Extended BASIC, 32K, and a disk drive system. A printer is recommended.

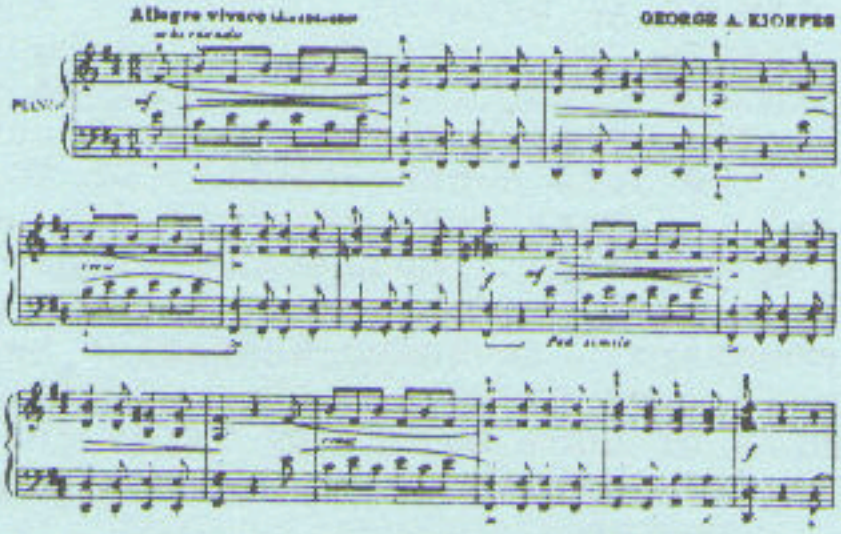
T.O.D. EDITOR

Now, create your own custom games for Tunnels of Doom module! The Tunnels of Doom cartridge is perhaps the best adventure TI ever produced, with it's three-dimensional graphics and dungeon -like setting. It is comparable to programs for other computers costing many times more. However, Texas Instruments made no provision for any new games. Now, with the T.O.D. Editor from Asgard Software, even non-programmers can easily create exciting new quests for themselves or their friends! The user of this totally menu oriented program is not required to learn a complex programming language to create challenging and intriguing games for entertainment and profit. Asgard Software even offers people who make games with this utility a free evaluation for marketing, but any games made with the program may be freely traded or sold by the author. This package includes a free sample game made with his utility that can be played right out of the box, a disk and an extensive 16 page user manual and tutorial that explains all the features of the program as well as offers advice to beginning users. This program requires Extended BASIC, a 32K memory expansion device, and a disk drive system. The Tunnels of Doom module is required to utilize any game made with this utility. Written by John Behnke, the author of many games for the Tunnels of Doom cartridge.



Music Synthesizer

A whole new concept in music creation for the TI-99/4A! This program was designed exclusively with the novice in mind. It features truly easy to understand menues, easily recognizable symbols, and a simple but effective note-placing method that a child can master instantly and won't take an adult much longer to learn. While lacking some of the features only used by advanced musicians, this program more then makes up with it with a raft of it's own. Music Synthesizer allows you to have total control over your creation. You can save and merge songs at will to create entirely new compositions. The program also features a very friendly note editor, a logical "sheet" method for storing music, and a powerful "play" command. This program will give the non-musician a whole new world inside their computer! Requires a disk system, 32K, and an Extended BASIC module.



Balloon Wars

Balloon Wars is singularly unique among TI-99/4A games. There is no game like it for any computer! It is one of the first games that can truly be called a strategy/arcade game. You are in command of a hot-air balloon, and your mission is to fly across 30 screens of hostile enemy territory to reach your base deep inside the desert. It's not this simple though - you have to fight leaks, short supplies, and enemy troops on the ground that would like nothing better then to shoot down your balloon. You also just can't stay in the air either - you need to periodically land and obtain more fuel and sandbags. This is a game of skill, strategy, and some good luck. With three levels of difficulty, the challenge never ceases! It requires Extended BASIC, 32K, and a disk system.

The Volcano Fortress

Asgard Software is pleased to present a new quest for the users of the Tunnels of Doom module designed in the best tradition of this fantastic cartridge; The Volcano Fortress. This outstanding adventure, by John Behnke (author of TOD Editor) will appeal to both the hardcore fan and casual user of the Tunnels of Doom module. Explore this evil fortress for hidden treasures, but watch for unknown monsters! Includes extensive game manual and two more free games for this module. Requires the Tunnels of Doom module by Texas Instruments, and a disk drive system.

Notices...

Public Domain Distribution: As a service to user's groups and individuals, Asgard is distributing two seperate sets of public domain software. Each may be copied freely by all parties, but may not be re-sold. The first package is a collection of public domain music, previously sold as the "Best Public Domain Music", and may be obtained by sending six (6) initialized SS/SD disks and a mailing and copying fee of $5.00. The second package is a set of 48 pictures in the GRAPHX format, and can be obtained by sending eight (8) initialized SS/SD disks, and a copying and mailing fee of $7.00. All documentation included with each may be duplicated at will.

Asgard Light Pen: Asgard Software is making available to all interested parties this high-quality photo-receptor device manufactured by Bob Emmel. This device is an ideal alternate input device for games, utilities, and educational programs. It can be used through all languages that support the use of a joystick (BASIC, Extended BASIC, Forth, etc.) It includes two-pages of documentation, and a disk of four sample programs in BASIC. Comes with a 90-day money back guarrantee. All for $21.00

Asgard Numeric Keypad: This well-made keypad is a complete hardware based modification of the 99/4A keyboard. Comes with a replacement 99/4A keyboard, along with a rugged keypad on a three foot ribbon cable which is strung outside the console and may be placed at any location that is conveniant. Keys include all numbers, decimal, ENTER, minus, "S", "D", "Y" and "N". Great for databases, Multiplan, and any data-intensive work. Carefully made for long-life and durability, but includes a 180-day warranty as well as 90-day money-back guarrantee. Compatible with all software. Available for $70.00

NEW!
THREE FROM ASGARD...

Artist Companion

Now, from the makers of the highly acclaimed GRAPHX Companion (see review in the Sept. '85 issue of MICROpendium) a companion product for the latest advance in 99/4A graphics, TI-Artist. All others aside, only our companion features art work from some of the best artists in the TI-99/4A world - Warren Agee, Chris Bobbitt, and many more fine craftsmen. Only our companion features not only the best art for GRAPHX (including the winner of the MICROpendium graphics contest) but also a collection of all new art work designed specifically for TI-Artist. Finally, our companion is also the least expensive available, only $7.00 for a two-disk package. Requires TI-Artist Version 2.0

$7.00

Recipe Writer

Now available, the ultimate kitchen aid for the TI-99/4A! This useful utility for home-maker and chef alike is written entirely in the Forth language. Not only is it blindingly fast, it is also easy-to-use with one-touch menus and full prompts in English, not computer-ese. Its many powerful functions allow easy recipe entry and editing, printout and organization. Included are options for easily converting recipes to different serving sizes, and for printing stored recipes on index cards as well as regular paper. Ideal for maintaining a collection of recipes without messy, unorganized pen and paper! Requires Extended BASIC, 32K and a disk drive.

$12.00

Quick Dialer

At last, an easy-to-use automatic telephone dialing program designed for use with popular terminal emulator programs such as FAST-TERM and P-TERM! Store up to 100 names and numbers in a single directory file for dialing at the touch of a single key. Features automatic re-dialing if a number is busy, full name and number editing options as well as complete print and display functions. The package includes a pre-written version for use with FAST-TERM, an easily modified generic version for other TE programs, and extensive documentation. Great for use with Compuserve, Source, and local BBS systems. Requires Extended BASIC, 32K, disk and a modem.
