AVERAGE BEAR WRITER

ADULT TOY

At last, a word processor that even a child can use! From the bear-faced cursor to the simple 40 column screen which re-formats to adjustable line length text when printing, the AVERAGE BEAR WRITER is designed to bring the joy of word processing to all ages.

BUT WHO NEEDS AN EASY WORD PROCESSOR

The AVERAGE BEAR WRITER was designed for children....no doubt about it! But once you see what a joy it is to use, like the electric train that you bought your kids last Christmas, it too may become an adult toy.

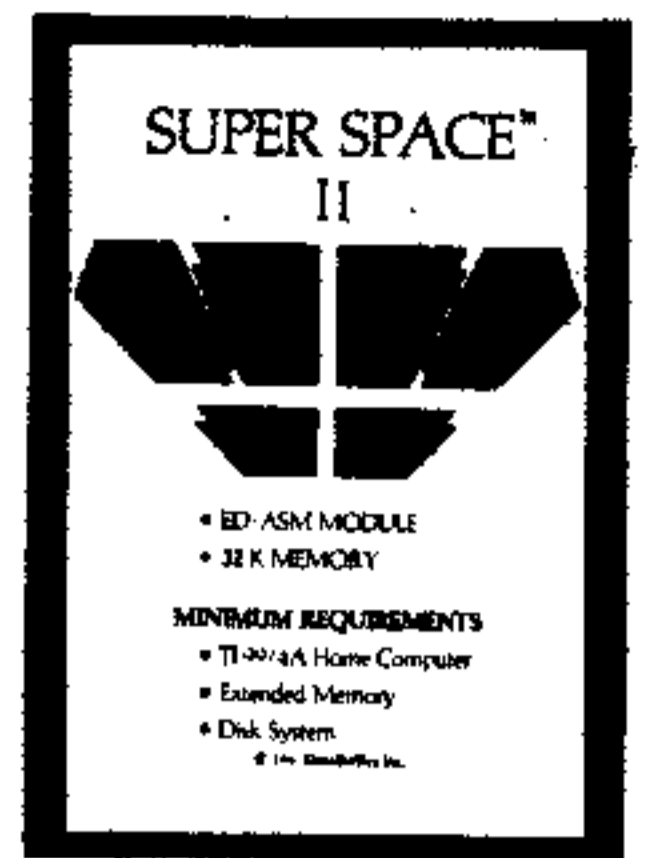

HOW CAN SOMETHING SO SIMPLE BE SO USEFUL

Here's what the BEAR does.....you can set margins, insert and delete character and lines. You have word wrap just like the big guys and can load and save from either diskette or cassette, and much more. The cassette version provides 6 screens full of text, while the diskette version gives you 12 screens! And that's one big letter! Available on either diskette or cassette.

Cassette Order No. DBCOAB. Ca res add tax\$19.95

Diskette Order No. DBDOAB. Ca res add tax\$19.95

SUPERSPACE II

DYNAMIC DUO

At last a 32K memory expansion loaded with built-in applications for the extra memory. Just plug in the SUPERSPACE II cartridge and instantly you have 32K more RAM available for your TI-99/4A system.

BUT SUPERSPACE II IS NOT JUST ANOTHER MEMORY EXPANSION

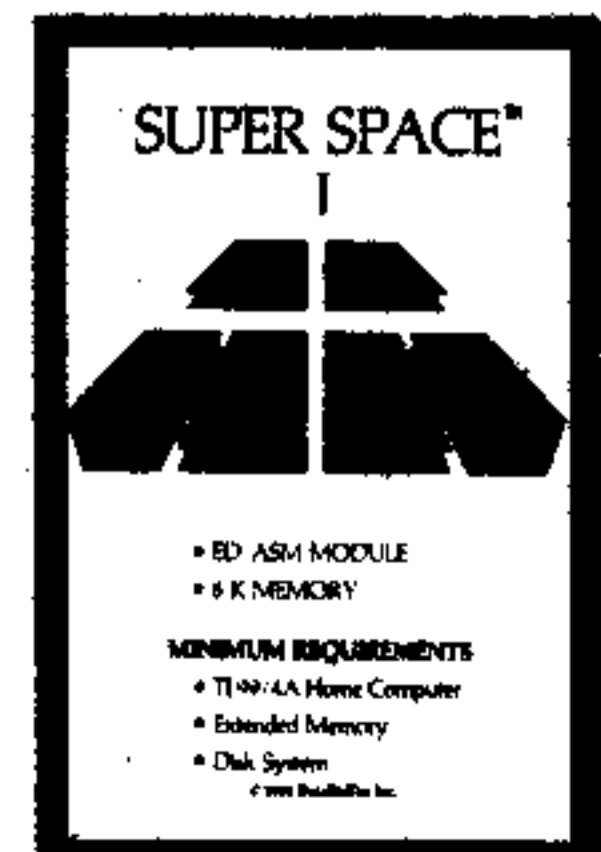

Have you ever wished for a cartridge with all your favorite software.... instantly available to plug in and run? SUPERSPACE II gives you the power to create your own cartridge based software. Load in your own assembly coding or vacuum software out of other cartridges. Or save your favorite ROM cartridges to disk and load/run through SUPERSPACE II at the touch of a single key! Design your own menu loader for up to 7 assembly language programs with this ingenious module, equipped with a lithium battery to save your programs in memory for at least two years.

SUPERSPACE II IS LOADED

SUPERSPACE II is also a super deal. Included with the module is a built-in Editor/Assembler GROM and free Editor, Macro Assembler disks and the SUPERSPACE II manual. The package comes complete with both of Steve Davis's books to guide you on how to program in assembly....more than 270 pages of instruction! To get you started, a menu and cartridge loader on disk are provided, along with Editor/Assembler utilities, GROM header templates, a bitmap graphics demo and a free "C" compiler. SUPERSPACE II requires a disk system and extended memory.

Order No. DBC2SS. Ca res. add tax\$99.95

SUPERSPACE I

THE SUPERSPACE 8K MEMORY MODULE

All the features of SUPERSPACE II but with 8K of additional memory. DOES NOT, come with the Steve Davis books and the "C" compiler.

Order No. DBCOSS. Ca res. add tax\$49.95

PILOT

THE WRITE WAY

Let's face it! Not all of us have the time or inclination to learn computer programming. If you have never programmed or want to multiply your programming power, PILOT is for you!

NO EXPERIENCE NECESSARY

With only 8 simple instructions to learn, anyone can author programs using this two-diskette package. There are other versions of PILOT around for other computers, but this one was developed just for the TI-99/4A computer user.... and it does great things for your ego!

AMAZE YOUR FRIENDS

Friends may ask "how come your PILOT program runs as fast as my assembly program? PILOT is not only an authoring language. The secret to PILOT's lightning-fast processing is the built-in assembly compiler and the fact that PILOT generates "9900" assembly code for you! You will need a disk system and 32K-extended memory to run PILOT.

Order No. DBDOPI. Ca Res. add tax\$24.95

THE LABEL MAKER

DON'T MAKE DO WITH LESS

Why settle for something less than the best? When you want to make that most important impression, select The Label Maker. This super Extended Basic program is easy to use.

ONE, TWO, BUCKLE YOUR SHOE

The Label Maker is so easy to use that you almost don't have to read the manual. From the on-screen help to just downright upright label making, this is the one for you.

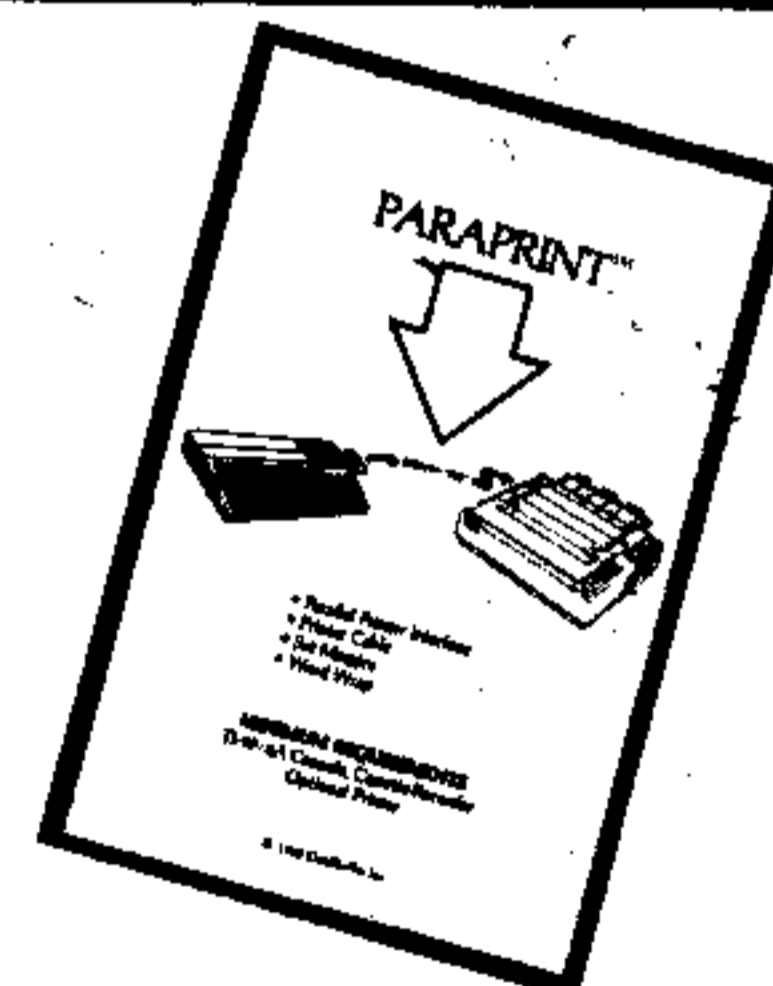

THREE, FOUR, SHUT THE DOOR

That's about how long it takes to make the one, two or three across labels. And, even letterheads can be made just as fast.

PARAPRINT

THE PRINTING CONNECTION

New from DataBioTics, the most advanced parallel printer interface for the TI-99/4A computer. With PARAPRINT, you can connect any parallel-input printer directly to your computer....simply plug one end into the side of your console, and the other end into your printer.

WHAT'S NEW ABOUT PARAPRINT

PARAPRINT does not split lines ever like the others. PARAPRINT lets you set both left and right margins. It even lets you turn word wrap on and off from the keyboard!

AND...

There is even a special word wrap you can control when listing your BASIC or EXTENDED BASIC programs. This means special formatting prints those programs in a way never before possible.

Order No. DBPOPP. Ca res. add tax\$69.95

DISK MASTER I

AMAZING NEW POWER

Everybody that tries it loves it. The user's groups are giving it "A" and "A+" reviews. DISKMASTER I is the powerful new disk manager that can be loaded from your console, from Extended Basic, Mini-Memory, Editor/Assembler, or TI WRITER using any disk controller card.

COMPUTER POWER

Here are some of the things that DISKMASTER I does.....Full screen edit where you can display or edit in HEX or ASCII...configure up to 6 disk drives and save all configure features...format multiple disks all at once...load and run assembly files without modules...print disk catalog and change screen colors... sector for sector copy/re-name disks...initialize diskettes in any format... recover deleted files...do diskette tests, and...

BUT WAIT...THERE IS MORE

DISKMASTER I can implement all file utilities at the same time. For example, you can: catalog/copy/rename/move/delete/change protection all at the same time! We call this a major advance in computing power.

Order No DBDODM. Ca res. add tax\$19.95

MINIWRITER III+

MARK TWAIN WOULD LOVE THIS

NOW all the power of TI-WRITER and more with the portability and convenience of the popular MINIWRITER cartridge! All the standard MINIWRITER features are here, such as add/delete, move/copy lines, search, horizontal tabs, word wrap, auto use of console or extended memory, chain printing of files, 8 different screen and text colors and a disk directory.

HARD ACT TO FOLLOW

The MINIWRITER+ versions upstage the original MINIWRITER. For example, you get over three times more storage, can set left and right margins, and do auto paragraph indenting. You can control directly from the keyboard to overstrike, underline, or make the printer do whatever you desire, using the same formatting as TI-WRITER and displaying control codes on the screen...this new version also lets you load and save from disk or cassette, print to RS232 or PIO with the unique DataBioTics 20 pin edge connector for direct hook-up of your printer with an optional cable. This cartridge is probably the only practical choice for anyone desiring to use word processing without investing in any expansion hardware.

THE ULTIMATE WORD PROCESSOR

How can all this be packed into a module? With TI-WRITER you needed a disk system and a 32K memory expansion, all of which required a sizeable investment in hardware. Many made the investment because they figured that a powerful word processor must be expensive. MINIWRITER III+ has changed all that. The secret of MINIWRITER III+ is the unique module housing an all new printed circuit board.

DON'T LEAVE HOME WITHOUT IT

With MINIWRITER III+, you need only your console and a printer to do the simplest to the most advanced word processing. Pack your console and a recorder into your brief case and take your word processor with you. You can use any TV as a monitor. When you get home, print out your work at your leisure.

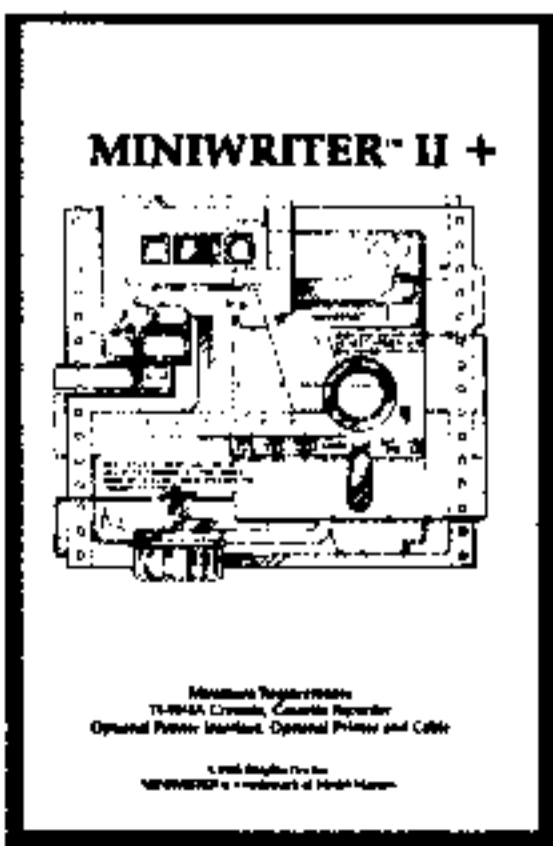

Order No. DBM1M3. Ca res. add tax\$49.95

MINIWRITER III cable

Order No. DBCAM3. Ca res. add tax\$19.98

MINIWRITER II+

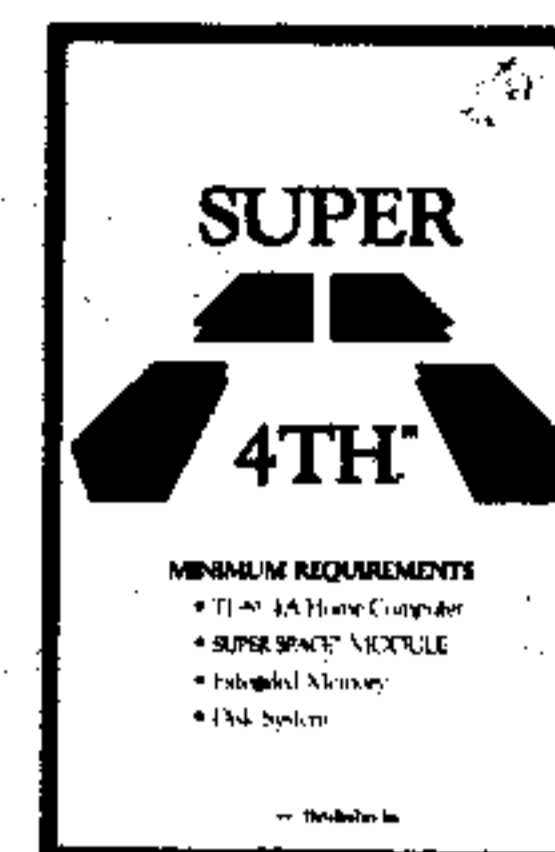

MINIWRITER II+ includes all the features of MINIWRITER III+ (above) without the parallel printer interface. RS232 Interface and optional printer required.

Order No. DBM1M2. Ca res. add tax\$39.98

SUPER 4TH

THE 4TH DIMENSION

Explore the world of FORTH with this exciting new two-diskette package which comes complete with a DECOMPILER and a clearly written manual.

WHAT IN THE WORLD IS SUPER 4TH

SUPER 4TH is a language, ideal as a step-up from BASIC and clearly superior to TI-FORTH. SUPER 4TH is almost as fast as Assembly but much easier to learn. Because SUPER 4TH runs in SUPERSPACE or SUPERSPACE II, you have 8K of additional RAM memory for applications....and there are many, many fascinating applications for SUPER 4TH. Unlike other versions of FORTH, SUPER 4TH supports both speech and sound, running loads of application programs in public domain.

THE SUPER 4TH BONUS

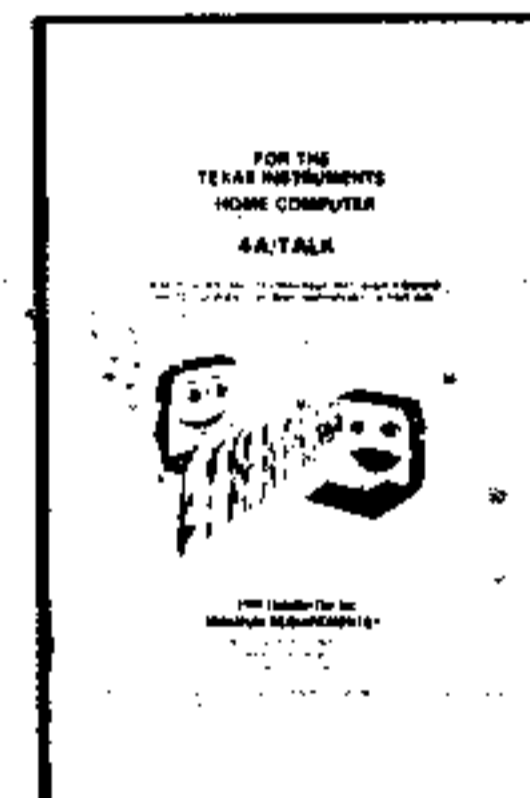

Because SUPER 4TH runs in SUPERSPACE or SUPERSPACE II, you get 8K of additional RAM for your applications....and SUPER 4TH can load and save to hard disk or to single and double-sided floppy disks. You even get a powerful demonstration of FORTH applied to recreating a Bach musical masterpiece! You need SUPERSPACE or SUPERSPACE II, a disk system and 32K memory expansion.

Order No. DBDISF. Ca res. add tax\$24.95

4A/TALK

PHONE COMPANY REVENGE

If you've ever had the urge to get into telecommunications with your TI-99/4A computer, 4A/TALK is the only game in town.

DEMON DIALER

4A/TALK is disk-based software that will automatically dial and re-dial any number until connecting, drawing numbers from a built-in directory file (all you need is a smart modem). But there is much more to 4A/TALK that meets the eye on first look....you can easily talk to other computers or connect to data bases such as the SOURCE!

MIGHT AS WELL GIVE IT AWAY

At \$19.95, we barely cover cost on this one. The 4A/TALK does loads more than other terminal emulators that we are acquainted with. You can transfer files at a rate of 300 to 9600 baud in your choice of protocol....select manual transfer using keyboard files, or XMODEM protocol, or even TEII protocol. 4A/TALK will work with any disk controller installed in your disk system, but you will need a 32K memory expansion, an RS232 Interface, and a modem.

Order No. DBD04A. Ca res. add tax\$19.98

NATIONAL ADVISORY PANEL UPDATE

UPDATE ON PRODUCT RELEASE SCHEDULE

DataBioTics has completed development of PILOT, an authoring language for the TI-99/4A. Those User's Groups that have ordered PILOT will be receiving their copies shortly through their NAP representative.

We are anticipating SUPERDISK release early next year. Those groups that have ordered RENOIR may have to wait longer.

We are offering all User's Groups a refund on any products ordered and not yet released. If you do not wish to wait any longer, let us know. We appreciate your patience.

NEW PRODUCTS

New products are NOT NOW being offered at 20% of suggested retail price (SRP) for NAP review. Products excluded from the 20% SRP NAP program are:

Average Bear Writer
The Label Maker
PARAPRINT
MINIWRITER II+ and III+
SUPER 4TH
SUPERSPACE I
SUPERSPACE II

The reason we have excluded these new products from the 20% of SRP NAP program is that the cost of handling, building, and packaging is now double what it was when the NAP program was introduced - just plain prohibitive!! We may re-instate the new product review plan, at a higher NAP cost, though.

MINIWRITER II+ and II+

The new MINIWRITER II+ and II+ word processors with more TI-Writer like features will not be available until early next year.

We have released MINIWRITER II+ and II+ Version 1.7, which allows left and right margins to be set. This version is available now.
