- Here are some tips to help you when entering programs from MICROpendium:
1. All BASIC and Extended BASIC programs are run through Checksum, the numbers that follow exclamation points at the end of each program line. Do not enter these numbers or exclamation points. Checksum was published in the October 1987 edition.
  2. Long XBASIC lines are entered by inputting until the screen stops accepting characters, pressing Enter, pressing FCTN REDO, cursoring to the end of the line and continuing input.

## Comments

# A new start for Geneve owners

Every Geneve owner hopes that Beery Miller and Cecure Electronics can bring some stability to the Geneve market, something that has been absent since the computer was introduced by Myarc. And the first signal of this should be the shipment of the final version of M-DOS. Once this is done, then users will have a stable platform from which to progress.

The most common criticism I've heard from users since the Geneve came out has to do with the fact that, because M-DOS is a work in progress, they can't write programs in A-BASIC. I know that Clint Pulley and others have done some wonderful things with c. But if you want to reach the level of the average user, you're going to have to give them a BASIC interpreter that is 100 percent functional. Then they can do the things they used to do on the TI using Extended BASIC. But, given the state of things up to now, anyone writing in A-BASIC has been able to do so only by working around the limitations of M-DOS. And in many cases, the limitations were so severe that the programmers simply stopped writing.

I think everyone hopes that is all behind us. I think we should

all look at this as a new start for the Geneve. And I, for one, welcome it.

### NEW 128K CARD ON THE SCENE

Asgard Software has released the Asgard 128K Memory System for use with the TI. The Peripheral Expansion Box card provides the normal 32K of expansion memory, plus 96K of additional CPU RAM when used with compatible software. Otherwise, it functions as a normal 32K expansion. However, it is not compatible with TI, CorComp or Myarc 32K cards. Also, it appears to be compatible only with Horizon RAM-disks.

Asgard says information on how to write programs to take advantage of the full 128K of memory will be freely provided. The company also notes that it has programmers working on programs for the the new card. A "compatible language" is also under development for use by casual programmers. The price is \$119.95, plus \$10 shipping. We'll have more on this in the October issue.

—JK

## Feedback

### Fibonacci quilts

Thank you for the program on the Fibonacci Numbers you had in your July 1992 issue. These series of numbers have other uses besides solving scientific problems or for puzzles. These numbers have turned out to be in the same ratio as many growth proportions found in nature. They were used by the Arabs in many of their intricate geometric designs.

As a quilter I use them whenever I want a pleasing proportion in my designs. They are nice for repeat patterns, and they can be used in four directions if wanted.

Joyce Becker  
Merrick, New York

### TI adaptor sought for Nintendo controller

There was a time when there weren't any new TI programs and I bought myself the Nintendo system. I did this two years ago. At first I wanted to use a Nintendo joystick,

but later I found out a person really needs to get familiar with the Nintendo controller. I wasted my money getting myself the joystick and decided to go back to the controller. The reason was I am getting ready to get the Super Nintendo.

Everytime a new TI game comes out I usually buy it. There must be TI-Nintendo owners out there who would like to use the Nintendo controller with TI games.

When the joystick first came out the thing was to buy an adaptor to use with the TI. Nowadays it's the other way around. TI-Nintendo owners would like some kind of connection so we can use the Nintendo controller with the TI.

I am a diehard 10 years TI owner.

Robert F. Mendez  
Fillmore, California

### Where's D&L?

In your July MICRO-Review section, you comment on the item Household Budget, from D&L Software, 89 Little Neck Ave., Somerset, MA 02777.

Upon my ordering such item from the above concern, my letter was returned by the Post Office with the notation, No Such Street.

Could it have been by any chance a typo error or a different city?

Alfredo Arroyo  
College Park, Maryland

So sorry — the city should be Swansea, not Somerset. — Ed.

### Praise for Cecure

I purchased my Myarc 9640 computer late in the game so I did not get in on the original sorting-out games that others had to play. I had some video and sound problems but I blamed them on the not yet complete software that others were complaining about. I bothered quite a few people in the TI/Myarc family, and while all tried to be helpful, I was not able to find a solution to my problems (MICROpendium was one of those).

(See Page 8)

# Feedback

(Continued from Page 6)

After deciding to "live with it," I read your article about Don Walden of Cecure Electronics offering repair of Myarc products. To make a long story short, Don was able to repair my computer by replacing a couple of chips. Not only were the repairs done at a very fair price and in a timely manner, Don went the extra mile with follow-ups and advice including some software patches.

I would encourage anyone who is having trouble with TI, Myarc or related hardware to consider contacting Cecure Electronics. It is people like Don Walden who will keep our computers alive for years to come.

**Dave Renkenberger**  
Wabash, Indiana

*Cecure Electronics is at 7759 So. Scepter Dr. #7, Franklin, WI 53132-2201. — Ed.*

## What's wrong with TI?

What's wrong with the TI99/4(A)?

It can be summed up in four words — "ninety-nine eighty five."

No, this is not the price your local discount store "blew" them out at in 1984 — or maybe it was, but I am referring to the TMS9985. This was the CPU that TI planned to have in the 99/4. Due to technical difficulties, the TMS9985 was never produced. That forced TI to use the more expensive 9900 in the 4A.

The TMS9985 is the father of the 9995, just as the 99000 is the son of the 9900. Let's review some of the highlights of the 9995.

- Has an onboard cache of 256 bytes.
- Has an 8-bit data bus.
- Utilizes only one dedicated external interrupt level besides Reset.

These are all "features" that the 9995 and 9985 share.

Highlights of the 9900:

- Has a 16-bit data bus to all memory.
- Has 15 external prioritized interrupt levels besides Reset.

Now, let's say for a minute you had a system designed for a TMS9985 but you were suddenly forced to use a 9900. What would you do?

- Tie interrupt pins such that only one ex-

ternal interrupt level was possible.

- You would probably implement the 256 bytes of on-board RAM as 256 bytes of static RAM on the 16-bit bus to simulate the on-board cache, but would leave the rest of the system access as 8-bit reads (done twice).

Does all of this sound familiar?

These considerations have had one major impact. If TI had implemented the 9900 like it had been designed, anyone building a 4A compatible would have been forced to use the 99000 as an upgrade processor.

While you can make a 9900 or a 99000 act like a 9985 or 9995, you cannot make the reverse happen.

**Dan Eicher**  
Mooresville, Indiana

## More than three

After reading "Sex and Extended BASIC" by Barry Traver in the August 1992 issue, I felt that I had to respond to the implication that were it not for a couple of women and one man (Lucie Dorais, C. Regena and Jim Peterson) there would be few if any Extended BASIC programs.

I am fairly new to the 99/4A and only five months ago joined the Danville 99er Group in Danville, Kentucky. I had seen their name in a list from TI but could not locate them because of the "old" address. Correct address is at the end of this letter.

To my surprise, the group has many, many listings for programs by Regena. I noticed that most (nearly all) are in TI console BASIC. That is not the major point here.

My point is that with so many 99/4A computers out there, that there "must" be many Extended BASIC programmers.

I base this idea on the fact that there are so many listings available in Extended BASIC that do not attach themselves to any of the three names mentioned above.

Because I am new to the 99/4A does not mean that I am new to the small "home" computers. I have come to care very much about the 99/4A and its abilities in the past few months and the devotion to it by (at least) the Danville group. Perhaps it is that I do not understand what is meant in the article by Extended BASIC programmers, but as a member of the Danville group I

have access to many Extended BASIC programs from "A/G Software."

Now I know that with so much out there nowadays there is really very little that one can do that is "new," but as far as a good Extended BASIC program, just what does it take to be good?

I have (as yet) not seen a bad program from "A/G."

This letter is not to promote the Danville group, but simply to make it known that with such programs as "Compare," "Amanda's Kitchen," "Jitterbugs" and the latest (dedicated) data base, "News Carrier," and many others, there are Extended BASIC programmers around.

And speaking of using Extended BASIC to "educate" children, Gene (the "G" in A/G) wrote a program a couple of years ago with his four-year-old granddaughter sitting on her lap that has taught her and other four and five-year-olds to spell numbers. Yes, I said to "spell" the numbers.

And if you "educators" feel that a four or five-year-old cannot learn to use the cross sections of a grid, then you are in for a shock. Gene's version of the old "Battleship" game (which he calls USS Seawar) does just that.

This game is designed for players older than four or five and it is true that the very young do not understand the "search" concepts used to play, but they do learn quickly how to enter the letter and number to pinpoint the exact location that they wish to shoot it.

Again, this is not to promote the Danville group, but it is the group of people that I know as 99/4A users. I am sure that Gene and Amanda both would say that they are "only beginners compared to many of the programmers out there." I feel, even without knowing the 99/4A users throughout the TI world, that there must be many good Extended BASIC programmers out there. I also feel (if I understood the article correctly) that just because those programmers decided for whatever reason not to go public in print with their work, does not mean that they do not exist.

## BASIC

## Loan Calculations

By REGENA

As my children have gotten older, it seems like they need more money. The problem is I have less money. Fortunately, I have a line of credit. Unfortunately, I keep using it. This month's program is a program to tell the loan balance, and the daily interest is calculated for each payment.

Payments do not need to be made the same day each month — with daily interest the amount of interest is calculated from the last payment. This program also allows you to change the interest rate on any day, and you can add to the loan at any time.

Line 230 asks if you want a printed copy. If you do use a printer with this program, be sure to put your own printer configuration in Line 300. If you don't want a printed copy, each transaction is shown on the screen as you enter information.

The table shows an example of what a printed copy can look like. This loan starts on 4/15/92 with a beginning balance of \$4,000. The annual rate of interest is 14 percent. The next date entered is 5/10/92. The screen will show how much interest has accrued, so I made a payment of \$200 plus the interest, or \$238.36. The interest and principal are shown, with the balance of \$3,800. At the next date of 6/04/92, I made a payment of an even \$800, and the interest and principal are shown along with the new balance. The next date shows another payment. Notice that the payments are on different days of the month.

On 8/01/92, a change in interest rate to 13 percent is shown. The payment on 8/08/92 reflects that interest rate change. The interest includes 23 days at 14 percent and 7 days at 13 percent.

A loan add-on is illustrated on 8/15/92; \$2,000 is added to the loan, to bring the principal balance to \$3,000. The payment on 9/02/92 includes interest on \$1,000 for seven days, then interest on \$3,000 for 18 days.

I ended the program here — I can't ever seem to get back to a zero balance. In fact, in real life, my loan add-ons are used more than payments, it seems. That's why I needed this program.

When you end the program, the total interest paid is shown.

Loan balances are calculated in many ways. Years ago, we paid monthly interest — even if we paid different days of the month. If days were considered, calculations were made on a year of 360 days (for easier calculating), and months were 30 days each.

Computers really made loan payments and interest calculations more fair. Eventually banks realized years had 365 days and months were different lengths. However, even now, banks do not consider 366 days on leap years. The daily interest is based on the annual rate divided by 365 days. The banks do not recognize

DATE	RATE	LOAN ADD-ON	PAYMENT	INTEREST	PRINCIPAL	BALANCE
04/15/92	14.00					4000.00
05/10/92			238.36	38.36	200.00	3800.00
06/04/92			800.00	36.44	763.56	3036.44
07/09/92			1077.20	40.76	1036.44	2000.00
08/01/92	13.00					
08/08/92			1022.63	22.63	1000.00	1000.00
08/15/92		2000.00				3000.00
09/02/92			221.72	21.72	200.00	2800.00
TOTAL INTEREST PAID				159.91		

that February may have 28 or 29 days. This program is based on the standard 365 days no matter what year it is.

Lines 380-400 and 1070-1080 calculate leap years to determine how many days are in February. Lines 190-220 read in how many days are in each month.

Lines 320-410 ask for the beginning year. I put in limits of 1900 to 2100 for the year. You then enter the starting month and starting day. Later as you enter months and days, you may not enter a day before the pre-

vious month and day. You may enter any month later. If the month number is less than the previous month number, the computer assumes you go to the next year. For example, if you are on 10/23/92 and enter month 2, the computer will assume 1993 and calculate the number of days appropriately.

Each new transaction or change starts by entering a date. Lines 790-1230 get this date and calculate the number of days between the previous date and the new date.

The next step is to choose to change the interest rate, to add to the loan, to make a payment, or to end the program. If you want to do more than one of these, use the same date and select items one at a time.

Lines 1360-1440 calculate the interest due. The daily rate is multiplied by the number of days and the balance. ITD is the interest which is incremented when the interest rate changes or there is a loan add-on but no payment is made. The interest is calculated only when a payment is made.

Lines 2230-2300 are a subroutine to format numbers into a money form with two decimal places. Lines 2310-2370 are a subroutine to put the month, day and year in a date format. Lines 2380-2420 put the interest rate in a format with two decimal places.

Negative numbers may appear. If you make a payment that is less than the interest due at that time, the interest will be paid, and the amount of interest still due becomes principal on the balance due. If you pay more than the balance plus interest, then you will get a negative balance — which means you would get change from your payment. The program automatically ends when the balance becomes zero or less (you have paid off the loan).

If you convert this program to Extended BASIC, it would become a much simpler program. Formatting and printing numbers with PRINT USING format statements really helps line numbers up. In TI BASIC, I converted to strings to manipulate trailing zeroes and decimal places.

If you wish to save typing effort, you may have a copy of this program by sending \$4 to REGENA, 918 Cedar Knolls West, Cedar City, UT 84720. Please specify that you need "Loan Records" for the TI and whether you want cassette or diskette.

## THE ART OF ASSEMBLY - PART 16

# Maximizing speed of execution

By **BRUCE HARRISON**  
©1992, Harrison Software

Today's topic is speed, but it is also choices. Once we are doing our programming in Assembly, we have a big speed advantage going for us compared to the interpreted BASIC or Extended BASIC languages. None the less, when operations are performed over many repetitions, as in a loop, the choices we make as to how to perform our operations can make a big difference in the speed of completing them.

We have touched on the topic of integer math operations before, and mentioned how using integers rather than floating point numbers can make things go faster. Here is a concrete example from our Golf Analyzer program. When that was reviewed by Bill Gaskill, he remarked on the speed at which the program performed the calculation of Handicaps. That calculation involves taking as many as twenty rounds of golf, adding up the scores, multiplying and dividing many times, and so on, yet when the program performed that operation there was a barely perceptible delay between starting and ending the process.

One thing that made such speed possible was the range of numbers involved. Course ratings, for example, which must be used in the calculation, have two parts (as we treated them). There is an integer part and a single decimal place. (e.g. 72.4) The integer part will not go over 100, and the decimal will always be just one digit. Thus we were able to streamline all our math operations that involve the rating by first multiplying the integer part by ten, then adding the decimal to that. In the example above, 72.4 would become 724. The gross scores, from which ratings are subtracted, were also multiplied by ten before doing the subtraction. Thus the whole of the calculations could be performed using the integer math instructions, and only at the very end of the calculations was the result divided by ten and then rounded to produce a "handicap". The code that performs this handicap calculation is shown in today's sidebar.

The source code will be difficult to follow, even with copious annotation, but we think it will serve as an example of how to take maximum advantage of the range of a number and thus apply the

much faster integer math operations rather than the floating point operations.

It is not important that the reader understand all the operations in the Handicap program section, but let's briefly describe what happens. The program has a file of golf rounds loaded in memory. It works backward from the round that has just been entered by the user, and will look at the round just entered plus the 19 or fewer rounds which precede it. Rounds are stored in date order, so the program will use the most recent 20 rounds.

For each such round, the program uses a subroutine to add up the gross score for that round. It uses other subroutines to find the course data for the round, including the Course Rating and Course Slope. (Slope is a number which ranges from about 100 through 130 or so, with 113 being the "normal" course slope.) The rating is actually stored in the course record as two bytes, one which contains the integer part, and one which contains the single decimal place. Early in the planning stage for GSA we saw that the rating multiplied by ten would always be far less than 32767, and so could always be treated as a word value in integer math operations.

The program then subtracts the rating times ten from the gross score times ten for each of up to 20 rounds, then performs a multiply and divide with the number 113 and the course slope. The result is a "differential" for the handicap calculation. These differentials are stashed in a table in memory for examination later in the process. If twenty prior rounds are available, the program will use the ten lowest differentials from that table to perform the handicap calculation. If there are more than four rounds available but less than 20, a lookup table will be used to decide how many differentials are used.

The ten lowest differentials are all added together (these are still ten times the actual numbers), multiplied by .96 (really multiplied by 96 and divided by 100). This result is then divided by the number of differentials used, and divided by ten to produce a handicap index number. The same result is then multiplied by slope, divided by 113, divided by ten and rounded to produce the handicap for the course just played.

(See Page 13)

# THE ART OF ASSEMBLY—

(Continued from Page 12)

This is probably all as clear as mud, but it may help those who are trying to follow what the source code does.

We don't really know how much impact there would be by performing all these operations in floating point math, because we have not tried doing this. What we intended to point out in all this is that programmers should take advantage of the situation they are presented with, and use integer operations where possible.

Another potential time-waster is in dealing with strings. In the same program, we had to find the course data for each round played, as the course data was stashed in a different part of memory. The course name was included in the record for each round played, but the pars for each hole on that course, and its rating and slope were stored elsewhere. This meant that for each round encountered, we had to look up the course information. That operation involved a special kind of string comparison to find the corresponding course record.

We were comparing the course name stored with the round with each course name among the courses in memory. That could involve considerable time, but we made a special kind of string comparison routine to minimize time spent. For the course names to be a match, they had to be equal in all respects, including length. Therefore since the length was there as the first byte in each string, we compared that first. If the lengths were unequal, then there was no point in comparing the content, so we got out of the comparison loop immediately. If length were equal, we would compare the content part of the string only until we found an unequal character, and then get out. Thus only the matching string would require comparison of all the bytes in the string to reach a decision.

In other words, our comparison would end as soon as it was possible to end it. This principle should be applied in all cases when strings are being compared.

In a more generalized case of string comparison, one can't make any decision on the length alone, because the content of the strings will determine which is smaller or larger. For that case, we have shown in the sidebar a general purpose string comparison routine that will determine which string is larger, or whether they are equal. If they are identical up to the length of the shorter one, the longer string will be called larger. This routine is drawn from our "Easy Data" source code, and was actually used in the sorting of strings from XB DATA statements.

## THE ART OF ASSEMBLY—

(Continued from Page 13)

Of course what is shown here is really a fragment, since it does not show what actually happens when strings are found to be bigger, less, or equal. In the actual application, this code resulted in storing the address of the least of the two strings, or the address of the first one if they were equal. We purposely left out that part from the sidebar so it would not confuse you.

In the real application, this string comparison was used as part of a very involved sorting routine. That routine was called from Extended BASIC, and could sort 55 records of six fields each by two criteria in about three seconds. That time includes the finding of the strings in XB DATA statements and the assignment of those 330 strings into XB Array variables. If such a sort were done by Extended BASIC, the time would be measured in minutes, not seconds.

Before we get too caught up in our own hype, though, we should say that what we are showing today are things that we have devised for specific circumstances. They have worked, and quite well, but that doesn't mean these samples are the "best" way to do things. Also, we are not showing today any "wrong" way to do things. The only thing we're attempting to say and show is a reasonably efficient and fast way to do some selected operations, and we are leaving the details of implementation to the user. The best way is still the one that you can use and understand, not necessarily our way.

There's another interesting tidbit in today's sidebar called the ROUND subroutine. There were places in the calculations where the formula called for a rounded result, so we devised this small subroutine to do the job for us. That is why we sometimes placed the divisor in R3 before doing a divide operation, instead of simply dividing by some word in memory.

The idea of rounding is simple enough in concept. If the remainder is equal to or more than half the divisor, then the quotient is incremented by one.

The first step in the rounding is to double the remainder in R6. Now we simply compare R6 to R3. If R6 is less than R3, then we do not increment the quotient. Otherwise we do increment the quotient, so it is now properly rounded. None of the cases where this was used needed the remainder for anything after this operation, so we left R6 alone as we exited. Had we needed R6 restored to its original value after rounding, we could put in one line at label ROUNDX to SRL R6,1. This would put R6 back to the value it had upon entry to this subroutine.

## THE ART OF ASSEMBLY—

(Continued from Page 15)

This rounding process is not always exact, but is good enough for the cases in which we have applied it. Suppose, for example, we divided 12 by 5. That would give us a quotient of 2 and a remainder of 2. Doubling the remainder would make that 4, which is less than 5, so the quotient would not be incremented. Had we divided 13 by 5, we would get a quotient of 2 and remainder of 3. Doubling 3 would make that more than 5 so we would (correctly) increment the quotient by one. We will leave it for the reader to play around with other numbers and see how accurate this process is. We chose this really simple method mainly for its speed, not for its ultimate accuracy.

The thoughtful reader will now look at our source code and see that in many instances we appear to have violated our own general rules. For example, we seem to be using labeled places in memory to stash values away, rather than keeping those values in registers, as we advocate.

Appearances can be deceiving. There are many subroutines called by the HCAP routine, and those alter the values in many of the registers. We chose to make room in our data segment of the program to stash things so we wouldn't have to worry about the registers that the subroutines use.

In the PC version of this same program, we handled things a bit differently. In the PC's Assembly language, one does not have the luxury of sixteen registers, nor the ability to do a "context switch" to another set of them. Instead, the PC has a readily useable "stack" segment in memory, into which one can "push" values and from which one can "pop" values whenever necessary. There are only four general purpose registers on the PC, called AX, BX, CX, and DX. There are also a number of special purpose registers which can't be used except for purposes like keeping track of memory segments and as pointers. A subroutine in PC assembly normally begins with a series of push operations to save the entry values of the registers, then at its exit ends with corresponding pops to restore the registers to their previous values. PUSH causes a value to be placed on the stack and the stack pointer register to be decremented by two. POP does the opposite. It looks something like this:

```
SAMPLE__SUB:
    PUSH AX
    PUSH BX
    PUSH CX
    PUSH DX
    (perform operations)
    POP DX
```

```

RETRN  RT          RETURN TO CALLING PROGRAM
```

```
POP CX
POP BX
POP AX
RET
```

This saves and then restores the four "general purpose" registers available on the PC. The special purpose registers on the PC, such as DS, ES, SI, and DI may also be pushed and popped in a similar fashion. Of course the disadvantage of this method is that there is a lot of program memory used up as "overhead" for the subroutines, not to mention that all this pushing and popping eats into execution speed as well.

Be grateful for the more efficient way that the TI lets us handle registers. While on this topic, we should also point out that not all operations on a PC can be performed with any of the four "General Purpose" registers. Indexed addressing, for example, can be performed using BX, but not AX, CX, or DX.

We hope this little digression into the PC realm will not upset you too much. It's there simply to show you what a good thing you have going in the TI's Assembly language.

## INCREDIBLE SOFTWARE

GAMES • BUSINESS • GRAPHICS • WORD PROCESSING • UTILITIES • DATABASE • MUSIC • COMMUNICATIONS • HOME

The TEX-COMP Freeware program is a disk distribution service which is operated to support the TI-99/4A user and programmer and to keep the TI-99/4A the best value in the computer world. The nominal charge (4.95) that is charged for each title is for distribution services only and includes the cost of duplication, premium grade disks, labels, advertising and packaging. The programs we distribute come from all over the world and are either public domain or the author has expressly agreed to freeware distribution or has placed the program into freeware distribution by providing it to a commercial bulletin board service.

### #1. THE SINGING TI-99/4A SPEECH & MUSIC DISK

This is the disk everyone is talking about. The computer voice actually sings to animated graphics. Includes routines by master programmer Ken Gilliland Bert & Earnie, Maltilda & much more. 2 disk sides, speech & 32 K req. Exbasic autoloader.

### #2. WHEEL OF FORTUNE, BLACKJACK & JOKER POKER

Three fantastic freeware programs on one disk. Professional quality and the best "wheel" game around at any price. Vanna would love it!

### #3. DUMPIT

This disk helps you transfer many TI modules to disk. Recommended for users with some programming ability. Ed/Assembler and "Widget" recommended.

### #4. PRINTART

Two disk sides filled with files that print out great quality pictures on most printers. Many famous TV and comic characters on this disk. "Beam me up Scotty."

### #5 ORIGINAL TI SALES DEMO DISK WITH TI-TREK GAME

This disk is packed full of assorted files of all types. Graphics, speech etc. Contains complete TI-TREK game for Speech Editor or TE-II module.

### #5A. TI MUSIC/GRAPHICS

A great collection of music and matching graphics. Great examples of music & sprite programming.

### #6. EXBASIC MUSIC

A two disk side collection of music & graphics that we consider some of the best.

### #7. SPACE SHUTTLE MUSIC/GRAPHICS

One of the real outstanding examples of programming. This disk has it all. Great graphics, music, and continuity. A real salute to the space program. It is almost like watching a movie!

### #8. LOTTO PICKER

This program randomly generates numbers for use in the various state lotto games and even runs a simulated lotto game. Easy to modify for pick 6 etc. games. A great learning and fun disk.

### #9. MONA LISA PRINT OUT

This disk prints out a near photo quality picture of that lady with the classic smile. We understand it was made by digitizing the original with a super powerful computer and converting the output to run on the TI-99/4A. Impresses everyone who sees it! Requires Epson printer compatibility.

### #10. GOTHIC PRINT

This disk lets you type out a phrase on the screen and then print it out in gothic (Old English) style. Looks like hand-lettered calligraphy. Use for invitations, announcements and business cards.

### #11. ANIMATED CHRISTMAS CARD "WOODSTOCK"

This disk was actually originally sent to TEX-COMP as a greeting from master programmer Ray Kazmer. It was just too good not to share! One of the best examples of computer animation and graphics you will see on any computer!

### #12. TI-99 OLOPY

This great piece of programming actually simulates and plays the famous board game. For legal reasons we cannot name the game but "do not pass Go! but go directly to Jail!"

### #13. STRIP POKER (PG RATED)

Play Poker against your TI-99/4A. When you win a hand she loses--a piece of her clothes that is. Don't worry about being a lousy poker player. Another file is included where you don't even have to know an ace from a king.

### #14. FIGURE STUDY (PG RATED)

A collection of Playboy type centerfolds that can be printed out at your command. Use with any printer.

### #15. STAR/EPSON PRINTER DEMO

This 2 sided disk contains a large collection of demo programs to put your Star/Epson compatible printer through its paces. Learn what control codes can do! Lots of text and graphics examples. Second side has a great tutorial on printer graphics with examples!

### #16. SIDWAYS PRINTOUT

This program allows you to print out the material from your printer sideways. Great for spreadsheets, banners and large graphics. Second side contains some new enhancements for Multiplan not available on the TI upgrade.

### #17. TI FORTH DEMO

This demo disk was released by TI to show the power of Forth. Fantastic music and graphics. Ed/Assem and 32k required!

### #18. TI DIAGNOSTIC

This program loads into the Mini-Memory module and checks out your entire system. Much better than disk based diagnostics that cannot be used if a problem in the disk system is at fault. Complete documentation on second side.

### #19. TI WRITER/MULTIPLAN UPGRADE

This disk released by TI adds real lower case to your TI Writer, speed to Multiplan and other enhancements. Easy to use... just substitute new files for old!

### #20. ACCOUNTS RECEIVABLE

This self contained prize winning program loads and runs in Exbasic and has all the features found in a professional accounting system. Complete with documentation and a second disk side with report generating programs.

### #21. DATA BASE DEMO DISK

A professional data base program that was originally written to store various magazine articles from computer magazines and then find them by name, subject, key word, or publication. Fast, easy to use and easy to adapt for other applications. Come complete with sample data to make learning data base processing easy. Completely menu driven and unprotected.

### #22. ASTROLOGY

This one is as good as will see in an arcade. Graphics and displays a Zodiac. Enter your birth date and learn about your sign, days and famous events on your birthday. Even report. Can be used as money maker at a charity fund raiser or spouse's car.

### #23. WILL WRITER

Enter your answers to a computer asked question program then writes you a will and testament. Now you can write your TI-99/4A to your nephew. Works with any printer. Appears legal in all states. Better check that out!

### #24. ENGINEERING CALCUL

A two sided computer has dozens of the most often engineering and technical. A real time saver. Does conversions, calculation designs electrical circuit for anyone whose profession involves scientific calculations. Even has communications applications.

### #25. MEDICAL ALERT

This disk contains many accessible files covering everyday medical emergency good "what to do until a paramedic comes" guide written and organized easily save a life!

### #26. R RATED GAME

It was bound to happen. (but demoted) programmer Germany wrote an Invader but with most unusual targets. Definitely not would find at your neighborhood. Not only a great but some great programs must be over 18 to order.

### #27. KIDS LEARNING

An educator in Georgia p sided disk collection of educational programs for kids. Contains great material: geography, reading, improve IQ testing. All hi programs for kids of all ages.

### #28. LOADERS AND CATALOG

We put together a collection of programs that catalog best programs that catalog a group of programs on a try them, pick the one you like, transfer it to another disk, the file name, and v. business.

### #29. LABEL MAKER I

Two great programs for custom labels for disks, video tapes or any other application. Even control graphic display of the console. Now you can create labels of any number by in the lines as you want standard tractor labels.

### #30. HOUSEHOLD BUDGET PRINTOUT

With this disk you print out the data you have stored with the TI HBM Module. HBM is a great module that can be used for many home and small business applications but TI forgot to include a printout function. This program comes with full instructions and we are sure that your HBM module will now start being used. Fantastic programming job.

### #31. MORSE CODE TRAINER DISK

This disk has everything you need to learn and practice Morse Code for the various FCC license exams. It also is great for scout groups and school "ham" clubs for group training and merit badge qualification. Professional quality.

### #32. EXBASIC XMAS MUSIC

Two disk sides full of high quality xmas music that can be played throughout the holiday season and then used as a learning tool since it contains wonderful arrangements and graphics. Autoloading and menu driven.

### #33. CHECKERS & BACKGAMMON

A collection of great checkers and backgammon games for the TI-99/4A. These are professional in quality and will keep you busy for hours.

### #34. SOLITAIRE & SCRABBLE

Another collection of classic games for the TI-99/4A. Exbasic & 32k req.

### #35. PROGRAMMING AIDS & UTILITIES I

A collection of some unusual programs of interest to programmers. One program shows a group of opening title displays, another is a cross reference program as good as any of the commercial ones, plus a great disk management utility.

### #36. STRICTLY BUSINESS

A collection of various programs for evaluating loans, calculating interest, and other financial items such as return on investment and security performance. Two disk sides filled with financial and business related programs.

### #37. LAPD COOKBOOK

This unofficial police cookbook was put together by one of our boys in blue who is also a gourmet chef. (Yes, it contains jailhouse chili) Over 50 great recipes from soup to nuts on two disk sides and each separate side can be called up on screen or printer in exbasic from a menu. As good as any of the new PC computer cookbooks we have seen.

### #38. GREAT 99/4A GAMES VOL. I

A collection of professional games in assembly and exbasic that all load from a menu in exbasic. Includes a great ski game where you dodge the trees in a fast downhill run. We have included only the best.

### #39. GREAT 99/4A GAMES VOL. II

Still more of the great ones from all over the world. The quality, graphics and speed of many of these games will make you wonder why they were never released commercially.

### #40. ARTIFICIAL INTELLIGENCE

This disk contains the famous computer program "Eliza" where you type in a question or a problem you are having and "Eliza" helps you find the solution. Also contains one of the better bio-rhythm programs so you can analyze all your emotional problems at one sitting.

### #41. VIDEO GRAPHS MODULE BACKUP DISK

This disk is a backup of the discontinued Video Graphs Module from TI. For legal reasons, it can only be purchased for backup use by owners of the original module. Do not order UNLESS you have the original module and intend to use this disk only for backup purposes. Exbasic autoloader.

### #42. FUNNELWEB FARM UTILITY

You heard about this one, now direct from Australia is the latest version of this fantastic utility that puts everything at your command. From one program you can access word processing, editor assembler, telecommunications and just about everything else. A freeware program complete with documentation on a second disk side.

### #43. BEST OF BRITAIN, VOL I

Now for the first time, a collection of the best 99/4A games Britain has to offer including the famous "Billy Ball" series of arcade games. Great graphics, action and excitement.

### #44. LABEL MAKER I GRAPHICS

A disk filled with graphics for the Label Maker I disk (#29). Dozens of great graphics for custom labels!

### #45. BEST OF BRITAIN, VOL II

This disk contains an outstanding 3-D graphics adventure game for the TI-99/4A. Carfax Abbey lets you actually move through a four story mansion complete with bats and vampires. You actually are placed in each room and go up and down stairs and through secret panels. Legend of Zelda... look out!

### #46. SUPER TRIVIA 99

A great trivia game for 1 to 4 players with great questions and capability to add your own and print out the files. This one is a real challenge.

### #47. INFOCOM RAPID LOADER

If you have Infocom games this is for you. Loads all TI Infocom games in only 28 seconds and permits new screen colors and improved text display. Comes with all documentation on disk.

### #48. GHOSTMAN (from England)

This Pacman/Munchman type game starts at a slow pace and slowly speeds up to a break-neck pace. A totally new experience.

### #49. DEMON DESTROYER (from France)

This great assembly game starts where Invaders leaves off. Add features like descending aliens and closing walls. Hours of great arcade action.

### #50. OH MUMMY (from Germany)

Move through the chambers of a Pyramid in search of hidden treasure. Fantastic graphics and great entertainment.

### #51. BERLIN WALL (from Canada)

This game requires a mine field to be crossed before escaping from E. Berlin. Good graphics and a real challenge.

# FREEWARE

•• Public Domain and Shareware for the Texas Instruments TI-99/4A Computer.

Public Domain and Shareware Programs to Meet Your Every Computing Need.

## #52. ANIMATION 99 (from Germany)

THIS IS THE ONE!!! A demo disk filled with computer animation routines like you have never seen before on any computer. See famous cartoon figures move with more realism than on Saturday TV. This disk received a standing ovation when previewed at a local users group. We have even included instructions how to do it yourself on the second disk side. This one is a show stopper!!!

## #53. HACKER/CRACKER

A collection of disk copying programs that copy TI disks by tracks. If one of these can't copy a protected disk nothing will. We included a collection of the very best ones including both TI and CorComp compatible. These programs require 2 disk drives and 32K of memory.

## #54. ASTRONOMY

This program from Australia plots the heavens and teaches you about the solar system. A great learning and reference tool. Exbasic and 32K required. Don't confuse this one with our Astrology demo. They are not the same... ask Nancy!

## #55. SCREEN DUMP

This program allows you to dump disk and even module programs to a Star/Epson compatible printer. Comes with easy to follow plans to build a load interrupt switch which is needed to dump module programs. This dump program by Danny Michael is considered the best of the bunch! Complete with documentation.

## #56. SPREAD SHEET

OK, it's not Multiplan but it works great and handles many spread sheet applications. A great way to learn to use spread sheet software. Comes with full instructions and documentation.

## #57. TELCO

Considered one of the best data communications programs for the TI-99/4A. Complete with documentation.

## #58. PR BASE

The alltime most popular and widely used data base program for the TI-99/4A. A freeware program that is widely supported and updated.

## #59. GRAPH MAKER

A collection of the best programs for producing graphs and charts from your data. Exbasic and printer.

## #60. FREDDY

A fantastic game where you guide the hero through underground passages filled with danger. Nintendo quality, great graphics and fast action. One of the best we have ever seen!!!

## #61. THE MINE

A fast action game from F.R.C. that will keep you going for hours. Many screens and skills required.

## #62. DISK MANAGER II MODULE BACKUP

The complete TI Disk Manager II on Disk. For legal reasons it is only available to owners of the original module for backup use.

## #63. ASTROBLITZ/MAZOC

A pair of great games that continue where Parsec and Munchman leave off. Imagine Parsec with enemy space craft coming from in front and in back of your ship!!!

## #64. MAJOR TOM/SPACE STATION PHETA

A pair of great space games. These two are going to keep you in front of the 99/4A for hours. Great!

## #65. PERFECT PUSH

An all new space game where you assemble and launch a rocket ship in outer space while avoiding a space monster. This one is professional in very way. Graphics, speed and action!!!

## #66. HEBREW TYPEWRITER

This program converts your TI-99/4A keyboard into a typewriter that displays Hebrew letters on the screen. Can also be printed when used in conjunction with screen dump program (included). Great for religious training or making your copy of the dead sea scrolls or ten commandments!

## #67. GENEALOGY

Now you can set up your family tree and store or print out the records. Great for keeping track of family relationships and records.

## #68. CHESS

The original computer chess game Sargon has been reprogrammed for the TI-99/4A. Now play chess with your computer. Documentation included. Exbasic autoloader.

## #69. COMPUTER PLAYER PIANO/KEYBOARD CHORD ANALYSIS

A unique music program which displays a piano on the screen and actually plays your selections.

## #70. TI RUNNER II

The very latest (and best) "runner" game based on TI Runner and Star Runner. Great action, graphics and entertainment.

## #71. KIDS LEARNING II

Two more disk sides loaded with the best in educational programs. Kids improve their math, spelling and comprehension skills while having fun.

## #72. CERBERUS

Fantastic space game from Germany Pilot your ship through narrow and crooked channels in space without colliding. Great graphics and music.

## #73. CRYPTO (gram)

One of the best word games we have seen for any computer. Set up like a TV game show with great screen displays.

## #74. LABEL MAKER II

Make labels for holidays and special events. You compose the text and select the resident graphics for the occasion.

## #75. DISK CATALOGER

Now you can organize your disk files with this great utility. Files, sorts, and prints your records. Easy to use.

## #76. PROGRAMMING AIDS AND UTILITIES II

A collection of very useful material. Includes a program to convert basic to exbasic so your old basic programs will load & run in exbasic, even with graphics. Also includes two on screen diagnostic programs to test your keyboard and processor. A great merge utility is also on this disk.

## #77. MICRODEX 99

A database program by Bill Gaskill which files and retrieves data such as magazine articles. A sample database is included.

## #78. ARTCON+ BY RAY KAZMER

ATTENTION GRAPHX AND TI ARTIST USERS!!! This program lets you convert Exbasic graphics to TI Artist and Graphx pictures. Also contains a new MAC-RLE (?) for converting from Artist to Graphx.

## #79. DM1000 V3.5

One of the most popular disk managers for the TI-99/4A. Originally a rip-off of the CorComp manager, it has been improved and refined by talented users all over the world. This version is deemed the most reliable to date and is far advanced over the TI Disk Manager II.

## #80. BIRDWELL DISK UTILITY

A must if you are into programming and software development. Besides being a great disk manager, it has provision for copying sectors, comparing files and is menu driven. Complete with documentation.

## #81. HOME ACCOUNTING SYSTEM

A complete family & small business accounting system including a checkbook manager, budget analysis, mailing list and an inventory program. Complete with documentation. Easy to modify for specific needs.

## #82. CROSSWORD PUZZLES

This program from Australia creates a different puzzle each time you run it. Self contained with definitions and vocabulary taken from a leading crossword dictionary. Great crossword fun.

## #83. HOME APPLICATION PROGRAMS

A two disk side collection of useful programs for the home. Includes banking, cooking, home bar guide, utility records, and much much more. Something for everyone.

## #84. GALACTIC BATTLE/SPY ADVENTURE

A pair of great commercial quality games from EB Software of TI Runner fame. Galactic Battle is a space "trek" type strategy game for one or more players. Spy Adventure is an adventure game that will keep you guessing for hours.

## #85. AUTOBOOT UTILITY

This utility which can be installed on a disk loads and runs or displays most files. Now you can have a disk with exbasic programs, Editor Assembler programs and TI Writer files and run or display them all from exbasic.

## #86. COLUMN TEXT III V3.2

A very useful utility for printing TI Writer and 99 Writer II files in separate spaced columns. Saves hours in producing a newsletter. Complete with documentation.

## #87. ARCHIVER III

This utility allows you to "pack" or combine several files into one for space utilization. A number of boards are sending files packed to save transmission costs. This utility will let you pack and/or unpack these files.

## #88. AUSSIE GAMES VOL 1

A collection of games from our friends down under. Includes a great card game and board game. Hours of fun and entertainment. Includes Matchmaker & TILLO.

## #89. PROCALC

This is an on screen calculator for decimal/hexidecimal conversions and much more. A must for the serious programmer.

## #90. JET CHECKBOOK MANAGER

This checkbook manager is considered the ultimate with every feature you can think of for keeping track of your checking account and keeping records of your spending for budget and tax purposes. Complete with documentation.

## #91. "THE MAZE OF GROC" (St. Valentine)

Ray Kazmer has created a great maze game with fantastic graphics and the characters from his now legendary "Woodstock" disk. Fun for all!!!

## #92. HOUSEHOLD INVENTORY

Written by 99/4 programming great Charles Ehninger, this prize winner originally sold for \$59.95. Keeps track of household, business or personal items by category and provides automatic updating for inflation etc. A must for tax and insurance records!

## #93. THE KBCB GIRLIE CALENDAR

This latest offering from programming master Ken Gilliland prints out a jumbo 12 month calendar with a knock-out centerfold pinup for each month. If you like our #14 Figure Study disk, you will flip over this one. For Adults Only!! Exbasic & d/m printer.

## #94. GREAT 99/4A GAMES VOL. III

If you have seen vols. I & 2 of this series you know we only provide the very best. This latest volume is also filled with a collection of great ones!

## #95. WEATHER FORECASTER

The weather predictions are amazingly reliable and accurate! A great game "Lawnmower" and a mini database are also included to make this disk a fantastic value.

## #96. STATISTICS & SORTING

Two great assembly utilities by John Glulow. STAT is a set of statistic routines for use in exbasic. SORT allows sorting by two separate fields and a choice of two types of sorts.

## #97. MEMORY MANIPULATOR

This powerful utility lets you explore the entire memory in your 99/4A system and take apart what you find. User friendly!

## #98. DAYS OF EDEN & DOORS OF EDEN

Two bible games (non-fiction) that work with the TI Adventure Module.

## #99. GREAT 99/4A GAMES VOL. IV

This disk features the works of J. Peter Hoddie. All of these games are of commercial quality and well worth the donation requested!

## #100. ASSULT THE CITY (T. OF DOOM)

An exciting game for use with the Tunnels of Doom module. Several Exbasic bonus games are included.

## #101. ENCHANTED DISPLAY PACKAGE

This screen enhancement utility lets you do 40 columns, windowing, reverse scrolling, clock/alarm, and a whole host of other great tricks in exbasic. Fully documented.

## #102. COLOSSAL CAVES ADVENTURE

This classic adventure now available for the 99/4A is what led to the Zork series. Hours of text adventuring.

## #103. SORGAN, THE 99/4A ORGAN

This program which is currently selling for big bucks on module turns your 99/4A into an electronic organ. Sound effects, different instruments and voices, chord forms, color graphics with complete control of all.

## #104. C99 COMPILER AND LIBRARY

This two-sided (flippy) disk gets you into C programming with your 99/4A. Comes with a great collection of utilities such as text & graphics. (E/A)

## #105. KING'S CASTLE

A great arcade style assembly game formerly offered on module. Also includes an EB "Trek" game and a collection of sprite & graphics from TigerCub's Jim Peterson.

## #106. QUEST (Dungeons & Dragons)

One of the best D&D games around! You must destroy the Dark Lord to free your homeland! Complete with documentation on disk.

## #107. STAR TREK MUSIC ALBUM

Ken Gilliland's music and graphics version of the TV theme and the three motion pictures. (Exbasic)

## #108. FUNNPLUS BY JACK SUCHRUE

Fantastic disk packed with Funnelweb (#42) templates, utilities and prog. to augment and configure Funnelweb. Unbelievable collection of fantastic aids to make the best even better!

## #109. TI-WRITER MINI MANUAL

This disk prints out a five page TI Writer manual with everything you need to know to use TI Writer or the many clones such as 99Writer II. Additional aids for using this powerful word processor are included.

## #110. DISK + AID

A powerful disk sector editor formerly sold for \$20. Menu Driven and easy to use.

## #111. POP MUSIC & GRAPHICS

This exciting disk from Germany features music/graphics written in 100% assembly and what comes from the TI sound chip is sure to astound you.

## #112. INVOICE PACK

An excellent invoice preparation and printing program with instructions on how to modify it for your own business.

## #113. LABEL MAKER 3

A collection of label programs to create mailing and disk envelopes, disk labels and much more!

## #114. PANORAMA

A drawing and illustration program that compliments Graphx and TI Artist. A must for the serious 99/4A artist!

## #115. GRAPHICS DESIGN SYSTEM

A complete system for creating graphic screens in full color for your programs by J. Peter Hoddie. Fully documented.

## #116. FOURTH TUTORIAL

A lesson in FORTH programming on how to create graphics.

## #117. UNIVERSAL DISASSEMBLER

This powerful utility written in Forth allows disassembly of programs off disk in any format, in memory, and even off of P-Box cards. Very complete with some very unique features.

## #118. FAST TERM

One of the most popular and recommended of the 99/4A terminal emulator programs Supports TE-II, ASCII, and X-Modem transfers, print spooling and more. Loads from Exbasic or E/A.

## #119. RAC LINKER

A utility for converting DIS/FIX 80 assembly object code files to PROGRAM image. This allows files to load faster and take up less space on disk. Full Doc

## #120. BITMAC

The original BITMAC is now available at \$4.95 with all original documentation. A powerful graphics program for the 4A which lets you print where you want... even over pre-existing text. Create great graphics in 16 colors, print text sideways, mirror image, upside down etc. etc. A must

for anyone into 99/4A graphics.

Comes with second bonus disk with utilities such as sign & banner makers. Even can computer generate your own signature!

## #121. SUPER YAHTZEE & WHEEL II

If you like Yahtzee this disk is for you. A great version written in high speed assembly. Also included is another version of Wheel of Fortune which also lets you create your own puzzles with a puzzle edit program included.

## #122. ADULT ADVENTURE

A truly adult adventure for use with the TI Adventure Module. Also included is a bonus adventure (not adult) "LOST GOLD" which is one of the better ones we have seen recently.

## #123. GREAT 99/4A GAMES, VOL V

THE FIFTH IN OUR BEST SELLING GAME COLLECTION SERIES. TWO DISK SIDES PACKED WITH THE BEST!

## #124. GREAT 99/4A GAMES, VOL VI

TWO MORE DISK SIDES FILLED WITH THE BEST GAMES AVAILABLE.

## #125. BLACKJACK & POKER

A DISK BACKUP FOR OWNERS OF THE ORIGINAL MODULE OWNERS.

## #126. PICO CHESS

A DISK BACKUP FOR OWNERS OF THE ORIGINAL MODULE. LOAD IN EXBASIC!

## #127. PIX-GRAPHICS UTILITY

THIS IS THE FREEWARE VERSION OF JIM REISS' UTILITY THAT CAN DISPLAY TI-ARTIST, GRAPHX AND RLE GRAPHICS AND CONVERT FORMATS.

## #128. TETRIS--THE SOVIET MIND GAME!

THIS INTERNATIONAL HIT IS NOW AVAILABLE FOR THE 99/4A. EXBASIC AUTOLOAD AND ENJOY THE INSTANT FUN.

## #129. CASH DRAWER

A COMPUTERIZED CASH REGISTER PROGRAM THAT PRINTS RECEIPTS, COMPUTES DAILY TOTALS AND EVEN FIGURES SALES TAX.

## #130. THE ORGANIZER

THE ORIGINAL ORGANIZER PROGRAM WHICH LETS YOU ORGANIZE, SCHEDULE AND ARRANGE BUSINESS AND PERSONAL ACTIVITIES!

# Speeding up your console

By JESSE C. SLICER

Does your stock TI99/4A console seem to be dragging in these modern days of computers running on 33 MHz 80486 and 68040 systems? If so, perhaps a quickie speedup is for you. The following instructional will show you how your stock TI99/4A can be speeded up from 3 MHz to 3.58 MHz. I accept *no* responsibility in the damage of anyone's computer equipment; however, I have taken care to ensure success. I credit most of the technical material presented here to Barry Boone, who first told me how this modification was done. Make sure you read this *entire* article before you take any action whatsoever.

## BEFORE YOU START

Before you begin dismantling your console, eager to speed it up, there is a part you may or may not need to buy. This is the 14.31818 crystal (this is *not* a clock crystal). I was once given two defunct Commodore VIC-20s and each of them had these for their video circuitry. Otherwise, it will be a trip to your local electronics store. Most Radio Shacks do not have this in stock but they can order it for you. It takes about four days, and the cost is about \$4.50.

## GETTING STARTED

With part in hand, and standard tools at your side, you are now ready to begin. Open the console all the way until you have the

circuit board facing up at you. About one and one-half inches below the 9900 microprocessor and just to the right of the 9904 sound chip should be a component that looks almost like the one you just acquired. Carefully note the number on the one on the circuit board. If it is not 12.000 (might be 28.000), then this console cannot be modified in this manner.

## REMOVING THE OLD CRYSTAL

Use your fingers to locate the solder pads for the crystal on the bottom of the circuit board. Flip the circuit board over. Using a desoldering

iron, remove the solder pads surrounding the leads. The crystal can now be pulled out of its normal place and set aside. *Do not throw it away!* You have

a definite use for this that I shall describe later.

## INSTALLING THE NEW CRYSTAL

(See Page 19)

## SPEEDING UP THE CONSOLE—

(Continued from Page 18)

Face the numbers that are on the new crystal in the same direction the old one was, slide the new crystal into the area where the old one was located. Using a soldering iron, place small solder pads around the base of the leads on the circuit board. Then, using wire snippers, cut the leads down to your solder. Clean up the area on the circuit board, close up the console, and turn on your computer.

### THE MAGIC HAPPENS

Run a few programs and note the increase in speed they have. Enjoy how you gained 19.3 percent increase in pure microprocessor speed. Then, as you run some programs (terminal programs, graphics intensive, for example), you begin to notice ...

### PROBLEMS!

Ack! Why did there have to be a snake in paradise? All is not lost. You can still use your terminal programs and graphics intensive programs with your new console. remember when you saved the 12.000 crystal? How about we put them *both* in and have a switch between them? Sounds like a good idea. Let's do it.

### INSTALLING DUAL SPEED CRYSTALS

Assuming you read through this entire document before you started, this will save you some trouble. First, obtain a double pole, single throw (DPST) switch from ye olde electronics shoppe. this should have six connections on the bottom of it. also, obtain about 10 inches of some thin duralloy wire. Cut the wire in half and solder one end of each of the wires onto the middle leads of the switch. Then, instead of installing the new crystal as shown under "installing the new crystal," install the other ends of the wire into the old crystal "socket." After that is complete, solder (remembering the way the numbers were facing in the socket (key them with the wires) each crystal to the two paired leads of the switch. Mount the switch somewhere on your console. I cut a hole in the back and glued it there. You now can switch between a standard console for those problem programs and the new *speedy* console that gets your work done somewhat faster!

### ENJOY!

Programs that do intensive number crunching or memory manipulation will benefit from this the most. Disk I/O will speed up slightly only because the code in the ROMs are being executed by the faster processor. Good luck and warp speed!

## EXTENDED BASIC (plus)

# Pegs and Puzzles

By **BARRY TRAVER**

©1992 B. Traver

It's time for some fun and games! This month's column is the first of a three-part series focused on an Extended BASIC program for one of the all-time classic (and fascinating) puzzle/games of the world. This month we offer the puzzles, next month we plan to offer the solutions (and some assembly routines to improve our XB program), and the final month we hope to provide some helpful commentary on the programming principles involved.

"Peg solitaire" has been popular in many countries since its creation sometime in the early 18th century or even earlier. You may be interested to know something of the background. The board itself was invented in the Middle Ages, quite possibly in Scandinavia. The game "Fox and Geese" has been popular throughout Europe and Asia. Gameboards dating from about 1300 have been found in England and Italy, and the earliest reference seems to be in the Icelandic Grettis Saga of the same time. Queen Victoria enjoyed playing "fox and geese" with Prince Albert

during their courtship, and the game was very popular during the Victorian Age. The gameboard itself, however, has found another equally popular use: the board invented for the two-player "fox and geese" game is now even more commonly used for "peg solitaire."

Legend has it that sometime in the 18th century an unfortunate French nobleman sentenced to solitary confinement in the Bastille developed "peg solitaire," using an improvised "fox and geese" board. It is likely, however, that the game existed before that, because the philosopher and mathematician Leibniz referred to the solitaire game in a letter he wrote in 1716. Whenever and wherever it was invented, "peg solitaire" is finding new life today. You may find, for example, finely crafted sets in the offices of executives, and new books have been published on the game in recent years (although not as many as were published during the late 19th century in France!).

There are two slightly different versions of the gameboard. The 33-cell version is the one commonly used in England, the

United States, and the U.S.S.R. The 37-cell version is more popular in France. But both forms are found throughout the world, and there is no reason not to enjoy both varieties. There is no standard way of numbering the board (each book seems to do it differently), but I've made use of the format used by Martin Gardner in his chapter on "Peg Solitaire" in his book *The Unexpected Hanging and Other Mathematical Diversions* (New York: Simon and Schuster, 1969), pp. 122-135. Three other books I've benefited from are these: *Creative Puzzles of the World* by Pieter van Delft and Jack Botermans (New York: Harry N. Abrams, 1978); *Games of the World* edited by Frederic V. Grunfeld (New York: Holt, Rinehart and Winston, 1975); *The Way to Play: The Illustrated Encyclopedia of the Games of the World* by the Diagram Group (New York: Bantam Books, 1977).

Some of the puzzles may be known by various names. For example, what some call the "Fireplace," others call the "Football Team." Likewise, what I call "Corner" (See Page 20)

## EXTENDED BASIC PLUS—

(Continued from Page 19)

to Corner,” some others call the “Cor-sair.” The specific puzzles included in my computer version of Jump-A-Peg are, I think, the most popular puzzles, but you can probably find many others if you check with your local public library. At any rate, something’s included for everyone here, from the simple “Latin Cross” to the 15-move “Davis Jump.” See how many puzzles you can solve by next month! (By the way, note that some puzzles may have hundreds of solutions: the solution I will be providing in the following column is just one example, and not necessarily the best!)

This month’s version of Jump-A-Peg is written entirely in Extended BASIC. Some of the operations (e.g., some screen displays) are consequently a bit s-l-o-w in operation. Next month we will be adding half a dozen or so assembly routines to speed things up, and maybe we’ll make some improvements in the XB code as well. (I don’t think I’ve written — or even seen, for that

matter — an XB program that can’t be improved, and that is especially true of my own!) The final month we’ll talk about some of the strong points (and some of the weak points?) of the program as a program, in the hope that you can apply some of the principles illustrated to your own Extended BASIC programming.

In the meantime, you have actually two types of puzzles to spend your time on: the various peg puzzles (see how many you can solve before next month!), and the puzzle of analyzing the XB programming (see if you can figure out how and why the code works before the third month, when I hope to explain things in some detail). Above all, I hope you will enjoy this Jump-A-Peg program, which has some advantages over non-computer versions: (1) you can’t lose the pegs, (2) you can use either the English or the French board, and (3) you have a number of built-in specific puzzles (and — next month — their solutions, which we will be adding to the XB program

itself).

By the way, although it is not always announced, FCTN-9 (ESCAPE) is active at most times while the game is running. What does that do? Well, FCTN-9 will allow you to escape to the main menu (unless you’re already at the main menu, in which case it allows you to exit the program). I’ll let you explore other aspects of the program on your own. Again, enjoy!

# Beery Miller now in charge of MDOS, other Geneve software

The MDOS buyout spearheaded by Beery Miller was successful, according to Miller, and he now retains exclusive rights to the source code for MDOS, ABASIC and PSYSTEM for the Myarc Geneve 9640.

Paul Charlton also included the GPL Interpreter source code. The source code is available only to financial contributors to the MDOS buyout. According to Miller, the source code will not be available on any network or BBS, and should not be distributed to anyone without Miller's direct authorization.

Final versions of the program image files for MDOS, ABASIC and the PSYSTEM runtime system will be available on Delphi, GENie and through other BBS systems.

According to Miller's contract with Lou Phillips of Myarc, Miller will send final copies of MDOS directly to the owners. Miller is awaiting names and addresses of the owners from Phillips. Phillips required Miller to handle the estimated 2,200 Geneves and the final mailing of MDOS software in lieu of receiving immediate cash for the buyout.

Miller notes that he had anticipated mailing for 800 Geneves and is still short of money to handle the final mailing. He says contributions will be welcome, and persons may still have the option of acquir-

ing source code diskettes with a minimum \$25 contribution.

Suggestions for enhancements to MDOS will only be accepted from contributors; bug reports will, however, be accepted from anyone, Miller says. He says current enhancements have included a three-fold speed increase for any floppy controller access and a two-fold increase in hard drive speed.

A Hard and Floppy Disk Controller and hard drive are required to assemble the source code to these systems, as well as ownership of GenPROG by Paul Charlton,

Miller says. Miller says he is negotiating a contract with Charlton on the redistribution of this package.

Packages are available in 5.25-inch DS/SD (180K) format or 3.5-inch DS/QD (720K) format.

Prices are: MDOS/GPL, \$10 for four 5.25-inch disks or \$5 for one 3.5-inch disk; ABASIC/GPL, \$7.50 for three 5.25-inch disks or \$5 for one 3.25-inch disks; and PSYSTEM, \$5 for two 5.25-inch disks or one 3.25-inch disk.

Write Miller at P.O. Box 752465, Memphis, TN 38175.

## Myarc sends hardware to Cecure

Don Walden of Cecure Electronics says he received a package of gate arrays for the Myarc Hard and Floppy Disk Controller and Geneve 9640 and some 9938 video chips from Lou Phillips Aug. 24.

"There was no note or anything," Walden says, "just the package."

Also, Walden notes, he recently received a letter from a user in Austria who had been referred to him by the Somerset County, New Jersey, Consumer Affairs Division. This agency has recently investigated a number of complaints against Myarc.

The Consumer Affairs Division advised the Austrian customer that Phillips had told them that Walden would be supplying proprietary parts.

Walden notes that he still has not directly heard from Phillips himself for several months.

For repairs or parts for Myarc products, write Cecure Electronics, 7759 So. Scepter Dr. 7, Franklin, WI 53132-2201 or call (414) 529-2173.

### Notung lists products

Ken Gilliland of Notung Software says the company has released several new products, and plans to release two more at the Chicago International World Faire Oct. 31 and one at the Australian TI-Faire in Ashfield, New South Wales, Nov. 28-29.

Recent products include "Disk of the Old West" at \$15 for the four-disk set, plus postage and handling; Midi Music for Midi Master 99, vols. 1, 2, 3, 4 and 5, DSDD format, \$5 each plus postage and handling; Fonts & Borders V, \$7 plus postage and handling; Notung T-Shirt, \$10 plus postage and handling; and How to

Use TPA, book with disk, \$19.95 plus postage and handling.

Planned for the Chicago fair is a videotape, "How to Use TI-Artist... and Not Go Insane." In it, Gilliland plans to show all features of TI-Artist Plus and go through several freehand drawings star to finish, as well as demonstrate drawing with the aid of clip art and covering the movie and 3-D vectors. Planned price is \$19.95 plus postage and handling.

Also scheduled for a Chicago release is "Disk of the Ancient Ones," containing clip art, essays, fonts and a game from the period of "The Ascent of Man to the Fall of Rome." Gilliland says he plans to have

a program which translates a phrase into ancient Egyptian hieroglyphs and offers a print-out on the printer version. Price is \$15 plus postage and handling.

Though Gilliland himself will not attend the fair in Australia, he plans to release his "Disk of Medieval Times," containing graphs, music, games and fonts plus histories and legends. He says a game for this disk "will probably involve jousting, slaying dragons and rescuing the princess." Price is \$15 plus postage and handling.

For information or to order, contact Notung Software, 7647 McGroarty St., Tujunga, CA 91042, (818) 951-2718.

## Harrison introduces Stor Mor for X BASIC

Harrison Software has introduced Stor Mor, a program which provides a set of tools that will allow the Extended BASIC programmer to stash string variables in the unused part of the 32K memory expansion, instead of the VDP RAM space used by XB for string storage. This means that programmers who make extensive use of string variables can have another resource available for keeping them in memory.

According to Bruce Harrison of the company, this is done with assembly routines. Versions included in the package use leftover high memory (program space) and low memory (assembly routine space). Error checking and reporting is built into the routines to help the Extended BASIC programmer debug his program, Harrison says. According to the manufacturer, all necessary object files, including AL-SAVE, are included, as are the source files and complete instructions on the disk, plus demo programs and an X BASIC program to print the instructions. No assembly knowledge is required.

Harrison notes, "We'd like to publicly thank Bill Harms of Chino, California, and Jim Peterson of Columbus, Ohio, for first

inspiring and then helping test and improve this product."

Stor Mor, on a single-side, single-density disk, sells for \$6, including shipping and handling in the United States and Canada, from Harrison Software, 5705 40th Place, Hyattsville, MD 20781.

## Quick File released

Bill Gaskill has released a new personal productivity program dubbed Quick File. The program can manage up to 1,352 free-form index cards, which may be used to store any type of information desired, from anniversary dates to insurance policy data, Gaskill says.

Each card can hold 36 lines of text, with 38 characters available per line. According to Gaskill, the Quick File editor used to create index cards offers several word-processor-like features, such as word wrap, insert and delete capabilities by character or line, and static cursor movement from line to line. Index cards may be saved using descriptions up to 32 characters long, and the program contains a built-in system of alphabetical organizing.

Quick Notes runs on a TI99/4A with Extended BASIC, 32K and one disk drive, or on a Myarc Geneve 940 in GPL mode with one disk drive. It is available for \$15 from

Bill Gaskill, 3210 Cypress Court, Grand Junction, CO 81506.

## Texaments halves 9640 game prices

As part of its Super Summer Deals promotion, Texaments is offering nine arcade games for the Geneve 9640 at half their normal retail price until Nov. 1, 1992:

**Jungle Terror.** A high-speed game where the player controls the white Jungler Worm and tries to destroy the evil red, yellow and green worms. Special price: \$7.47.

**Space Champions:** The player pilots a 21st century spaceship through missile zones, asteroid belts, enemy scouts and the mother of all enemy ships. Special price: \$6.47.

**Cave Explorer:** Locked in a twisted series of tunnels and caverns the player must find the secret key that will unlock the door to freedom. Special price: \$6.47.

**Train Twister:** Driving a train, the player must replace the tracks a few gremlins have moved while competing against other trains for the same track. Special price: \$6.47.

**Traffic Frenzy:** Driving a car, the play  
(See Page 27)

## BUGS & BYTES

### TI-Writer manual for \$1

Reader Ellen Kramer of New Jersey called MICROpendium to let us know that Texas Instruments is selling its TI-Writer manuals for \$1 plus \$1 shipping.

She says she called 1-800-TI-CARES and ordered the manual on her credit card. She was billed the \$2 plus 6 cents sales tax.

### Revised Disk Manager

Clint Pulley has reportedly revised his Disk Manager program to be compatible with the new versions of MDOS that support the P-system which have become available since the MDOS buy-out.

Pulley's address is 38 Townsend Ave., Burlington, Ontario, Canada L7T 1Y6.

### Andrew hits Tiers

Mark Wacholz of the Broward Computer Group has had a bulleting uploaded to Delphi, in which he notes that members of the Broward Computer Group were not hit too hard by Hurricane

Andrew, but that members of the Miami Users Group are either without water, food, electricity or phone.

"Some members living in Homestead have had a total loss of their home. There are also some members that haven't been heard from before the storm hit," he notes. "We are asking you to help in this time of need."

Wacholtz says money is needed, not food or clothes. Checks or money orders may be sent to him at 2141 NW 64th Ave. 15, Sunrise, FL 33313-3950.

He says the Drawing Board BBS will try to help locate anyone in the area. "Leave feedback before logging off the board," says Wacholtz. The number is (305) 749-5690. A voice number between 9 a.m. and 9 p.m. is (305) 749-4690.

### Howe heads SIG

Walt Howe has been named manager of the Internet forum on Delphi. Howe's experience with on-line services includes meeting his wife via CompuServe. He is the author of a number of programs for the TI and past articles in MICROpendium.

# Newsbytes

(Continued from Page 26)

er is stuck in traffic and must negotiate a way out of it without crashing into other cars or being squashed by a steamroller. Special price: \$6.47.

**Submarine Revenge:** Piloting a nuclear submarine, the player must attack the enemy base while avoiding depth charges, torpedoes and other deadly weapons. Special price: \$6.47.

**Sea Terror:** The player must swim the ocean sea to claim a sunken treasure and avoid being eaten by piranhas, sharks and killer jelly fish. Special price: \$6.47.

**Islander and Car Race (two games):** In *Islander* the player is marooned on an island and must avoid being killed by the natives. *Car Race* is an educational game where the player must use math and English skills plus quick reflexes to win. Special price: \$4.97.

Geneve Games can be ordered directly by mail by sending a check or money order to Texaments, 53 Center St., Patchogue, NY 11772. C.O.D. orders can be placed by calling (516) 475-3480.

A shipping charge of \$3.25 for domestic and Canadian delivery or \$8.50 for foreign insured air mail should be added to each order.

## Oakland Club gets new mailing address

New mailing address for the Oakland Computer Club is c/o Mrs. Eunice B. Spooner, RFD 1, Box 5860 Pond Rd., Oakland, ME 04963.

BBS number for the club is (207) 547-4107.

Membership in the club is primarily elementary school students at the Atwood-Tapley School in Oakland, Maine.

## BBS to close

According to a message signed by Shirley Slicer, sysop, and Jesse Slicer, co-sysop, the Manhattan Project BBS will close permanently at the end of September. Last night online will be 10 p.m. Sept. 30 through 7 a.m. Oct. 1,

Central Time.

The bulletin board has operated for more than five years and received more than 15,500 calls. The Olathe, Kansas, BBS operates 10 a.m.-7 p.m. Central Time, 300/1200/2400 baud, 8-N-1, at (913) 764-6451 and is PC Pursuitable through MOKAN.

**Reach thousands of Tiers for free. Send your news items to MICROpendium Newsbytes, P.O. Box 1343, Round Rock, TX 78680.**

## READER TO READER

Norberto Lambertini, Terrero II San Isidro, (1642) Buenos Aires, Argentina, wants to find out technical information or buy manuals for TI and Shugart floppy disk drives.

**Reader to Reader is a column to put TI and Geneve users in contact with other users. Address questions to Reader to Reader, c/o MICROpendium, P.O. Box 1343, Round Rock, TX 78680.**

# Ida McCargar, FestWest '90 organizer, dies

Ida McCargar, a member since 1985 of the SouthWest Ninety-Niners in Tucson, Arizona, died Aug. 8. She had been given a short time to live after surgery for brain tumors. Before her death, she planned her funeral services, conducted by the Rev. Ed McCallum at the New Covenant Church in Tucson, with burial in South Lawn Cemetery.

Born in western New York state, she studied library science at Syracuse University. She was married to Harold McCargar, and they had one son, three daughters, 10 grandchildren and a great-grandchild. Two of her daughters followed in her footsteps by becoming librarians.

She and her husband moved to Tucson in 1960. She worked for the Tucson Unified School District, where she started the Centralized Library Services and was responsible for cataloging books and audio-visual materials for the entire district. She retired in 1963.

For the SouthWest 99ers, she was in charge of the hard copy lending library and

disk library, cataloging newsletters and maintaining the Altman Fairware List. At her suggestion, the group instigated its Disk of the Month program. She attended all the Fest Wests and helped organized the 1990 Fest West held in Tucson. She appeared with the user group on KUAT-TV's Middle of the Road program.

She always paid for fairware, Tom Wills, the group's vice president, notes in an article in tribute to her in the group's newsletter. The SouthWest 99ers want Tiers to pay for their unpaid-for fairware as a memorial to her.

"When sending your compensation to the authors, mention that you are doing so in memory of Ida McCargar," writes Wills. "I'm certain all authors would be pleased to know how Ida has touched us all."

Wills also notes that fairware authors can send notices of new programs and updates to the SW99ers as a memorial.

The SW99ers September disk of the month is dedicated to her memory. It con-

tains the program AMAZEGRACE, which is the hymn, "Amazing Grace," she selected to be played at her funeral, as well as nine other programs, including games, utilities and graphics.

DOMs are available free to SW99ers attending the membership meeting each month. Members unable to attend the meeting may buy DOMs for \$1, either at a later meeting or by mail. Non-members should send \$2 for each DOM requested.

Cassettes are prepared each month for members with "cassette only" systems, free to members attending each month or \$1 as outlined above.

For further information, contact SouthWest Ninety-Niners, P.O. Box 17831, Tucson, AZ 85730; Cactus Patch BBS, (602) 290-6277 (8N1).

## Take a Break Attend a TI Fair

## MICRO-REVIEWS

# Column Text V4.4 and Margin Text V3.3, Disk of the Old West, Super Space Acer and RXB

By STAN KRAJEWSKI

This month there are two updates of programs I recently reviewed. Harrison Word Processor V2.2 (April 1992 MICRO-Reviews) has been updated for use on the Geneve. Geneve users had sent for this program and encountered problems loading. (See note below). Bruce Harrison reworked the LOAD program and Main Code so some Geneve users could use this new version, V2.2GX. I used this new version and it worked well for me on the Geneve using the TI Controller Card. If you are using another disk controller card, you might not be able to use this program on the Geneve. You should mention whether you want the Geneve or the TI version when ordering.

The second update is Astro-Mania (August 1992 MICRO-Review). Bugs I had noticed were fixed and it also warns the user if the write protect notch is covered.

I also have been advised that any checks sent to Media Ware Software should be made payable to Mark Wacholtz to avoid delays in orders.

Ratings for the software reviewed in this column are based on the Star system that follows.

★ Leave it alone, back to the drawing board.

★★ Needs improvements, but workable.

★★★ A good program, worth trying.

★★★★ Send your money and buy it.

NOTE: If the Geneve 9640 is *not* specifically mentioned in system requirements of any column I write, the program is TI99/4A compatible only.

★★★★

## DISK OF THE OLD WEST

Upon booting the Extended BASIC load program, you feel as if you are in the desert in the days of the Old West. You're looking at trail signs pointing to which key you will press.

System Requirements are Geneve 9640

or TI99/4A, 32K memory, disk drive, Extended BASIC and TI-Artist (needed for using the Instances or Fonts). This package contains four SS/SD disks.

By now you should know the format of Notung's "Disk Of" packages. This one, no exception, brings you into another graphical adventure. Your trail signs contain:

- A — Library of Legends
- B — Portrait Gallery
- C — Sing Along Saloon
- D — Faro Gaming Parlor
- E — Ride Off Into The Sunset.

Library of Legends contains key figures of the Old West such as William H. Bonney, the Earp Brothers, Judge Roy Bean, the James and Younger Boys, Frederic Remington, Belle Star, Wild Bill and Buffalo Bill, B. Siddons & Poker Alice, Custer and Geronimo.

These are D/V80 files and included is a file reading program to read any or all these files.

The Portrait Gallery contains six well created figures of the Old West. These are displayed through the program.

Sing Along Saloon option plays five songs with words displayed on the bottom of the screen. Faro Gaming Parlor features an Old West card game that plays one or two players.

Other features that make this disk an excellent value are: Two more Borders, rope and barb wire; western style Fonts, and many Instances for your TI-Artist program.

I found that just the big PHIDIAN\_\_F font needed TI-Artist Plus to load all of the character sets. The other two fonts can fit into memory with TI-Artist 1 or 2. The sing-along songs were plain vanilla in sound, but this set of disks has so much more making it a very good bargain.

Disk Of The Old West is available from Notung Software, 7647 McGroarty St., Tujunga, CA 91042. Price is \$15 plus \$1 S&H.

★★★★

## COLUMN TEXT V4.4 and MARGINTEXT V3.3

This set of Fairware programs has been improved and just recently updated since its last MICRO-Review (June 1989). System requirements are Geneve 9640 or TI99/4A, 32K memory, disk drive, Extended BASIC and a printer. Because this program was reviewed in a past issue I will just inform you of the updates.

I, like Harry Brashear, also am a newsletter editor. After reading his review I was prompted to send for this program. The program worked really fine but lacked a few things such as hard disk compatibility and a prompt for multiple copies. So I sent a note to Ron Pruitt with a few suggestions for improvement. He sent me back a nice letter and included a new copy with the improvements I mentioned, plus a few more.

In the main menu, 2 — Number of Columns option now offers 1 column (Pica), 2 column (Pica), 2 column (Cond), 3 column (Elite), 4 column (Cond). There is now a sixth option, Paginate Y/N. This feature will print a page number at the bottom of each page. It will also print "Continued from page x" on the following pages. When the program is executed it will now ask a Starting Page and Number Of Copies. Next it now asks you the Drive.Path.File Name for us hard disk owners. DSKx. can be used for disk drive users.

As almost all TI programmers will do, Ron will tailor the program for your system configuration. In this case if it does not work with your printer, let him know and he will reconfigure it for you.

Column Text IV is available from Ron Pruitt, 6429 South Fife, Tacoma, WA 98409. These are Fairware programs. At least a \$5 donation is requested plus \$1.50 S&H.

(See Page 29)

## MICRO-REVIEWS—

### ★ ★ 1/2 SUPER SPACE ACER

This game was written in c99, has good graphics and requires fast reflexes. So what is wrong with this program? Read on.

System requirements are Geneve 9640 or TI99/4A, 32K memory, disk drive, joysticks and Editor/Assembler cartridge or any Program Image loader.

You are in control of a space ship which appears on the bottom of the screen. You are constantly bombarded by alien probes and drones while they are firing at you. You must maneuver around the screen, firing at and dodging these enemies, while collecting boxes with Power-up and Shield symbols. Towards the completion of each level you must destroy the engines on the mother ship to complete a level. There are five levels of difficulty.

Now, here's why only two stars. What is wrong with two-player games? This is another game that does not include a second player. It can't be much more difficult to add a second player. I haven't seen a two-player option in joystick games in a long time. Competing with someone always provides a better challenge to the game. In that way the game would still get some use even though you had beaten all the levels. The second fault I found was, there is no SCORE to the game. How can you tell if you beat someone or yourself if you don't know what you did the last time you played? The least important flaw is the lack of a pause function, which would be nice. If these features were added to this game, I would have gladly given it a four-star rating.

The game runs flawlessly on the TI; however, though it runs on the Geneve, it does not display the nice TI-Artist start-up screen. You get a framed blank screen and must press the fire button to continue.

Taking all into consideration I still like the game and my kids like it, although they also mentioned the shortcomings. The sound effects and music are fine. Also, joystick response is excellent and the Extended BASIC equivalent of CALL COINC is good. Either joystick can be used to avoid fumbling with them. Another nice feature is your ship turns three colors to warn you as your shield is depleting. In-

cluded in the manual is an enjoyable story of Super Space Acer. I enjoyed reading it almost as much as playing the game.

This game can still be enjoyed if you don't mind playing by yourself and not having a score. Super Space Acer on SS/SD disk is available from Julius Software, 70 McEwen Ave., Apt. 1406, Ottawa, Ont., Canada K2B 5M3. The price is \$10 plus \$2 S&H (Canadian Funds) payable to Mike Ward.

### ★ ★ ★ ★ RXB

In case you haven't heard of RXB, also known as RICHGKXB, it stands for Rich Gram Kracker Extended BASIC. It is an Extended BASIC language compatible with TI Extended BASIC. It has all the TI Extended BASIC commands plus many more, making a more powerful programming environment. It loads into any TI with a GRAM device. It also works with the Geneve 9640 when loaded into GRAM. RXB is made to work out of its own environment. Included on this DS/DD disk are LOAD and DSKCMDs. Together, these programs contain some features that are contained in a disk manager.

System requirements are Geneve 9640 or TI99/4A, 32K memory, disk drive and a GRAM device such as Gram Kracker or Gramulator.

After you load RXB into your GRAM device, it will auto-load its own menu. From this menu you can choose from:

- |          |           |
|----------|-----------|
| 1-EA5    | 6-BASIC   |
| 2-EA3    | 7-XBASIC  |
| 3-EAMENU | 8-EAASS   |
| 4-STOP   | 9-CATALOG |
| 5-EAED   | 0-XBPGM   |

As you can see by the menu the program has a full arrangement of Editor/Assembler options. This means that you can run any Program or Image file without the Editor/Assembler cartridge. A catalog option and a program option let you look at a disk or load any Extended BASIC program without leaving this environment. You can even leave to TI BASIC. RXB will remain in GRAM while running any program or leaving to TI BASIC. When returning to RXB just have the RXB disk in the specified drive to reload the menu. If

the RXB disk is not in the drive it will enter the RXB Command environment instead of the menu.

Not only is RXB friendly to the user, it is also a programmer's paradise. For one thing, it allows auto-repeat of commands. You only need to use some commands just once and continue the contents of the statement by just using commas as separators and instead of duplicating the commands. A few of these commands are CALL KEY, CALL JOYST AND CALL COINC. Another good feature is the PDISK. This is an 8K area used for saving or loading programs. Up to four banks of 8K RAM may be used or switched from XB; however, this feature will not work on the Geneve. Combined commands can be used in a program line. Only one CALL is needed, and up to four characters replace two names. There are many more of its own additions, plus the Gram Kracker Extended BASIC additions. Now imagine how powerful RXB can be!

More than 60 pages of docs are included on disk. Another 22 pages of Gram Kracker Utilities are also included. This disk as I received it was close to filling a DS/DD disk. You must mention your configuration before ordering. RXB is available from CaDD Electronics, 81 Prescott Rd., Raymond, NH 03077. Price is \$24.95 USA, add \$2 shipping and handling outside the U.S.

**If you would like your software or hardware reviewed in this column, you may send it to: Stan Krajewski, Route 6, Box 568-15, Live Oak, FL 32060. If you would like it returned, please include postage. If you need to call me for any reason, you may reach me at (904) 364-7897 E.S.T.**

### MIDI-Master group forming

Dolores P. Werths, musician for Harrison Software, and Jim Peterson of Tiger-cub Software are trying to organize a by-mail users group for persons making music with MIDI master.

The group plans member exchange of SNF source file disks, a central clearing-house/library and a disk newsletter.

Write Werths at 5705 40th Place, Hyattsville, MD 20781.

# User Notes

## Full-screen editing for XB programs

We left out a large part of a user note in the July issue, about converting text files to programs. We are running the entire item here, with our regrets. The item originally appeared in the newsletter of the Central Iowa 99/4 User Group. We saw it in 9T9, the newsletter of the Toronto TI User Group, and it appears below.

John Hamilton, writing a column called 99 Tips in the Central Iowa 99/4 UG newsletter, is up to tip 81. We don't know about the first 80, but the last is a real humdinger.

John's crucial insight into TI's MERGE command makes this program tick. What he noticed — and TI didn't document — was that the MERGE command doesn't check for syntax on the way back in from the disk.

In other words, if your disk file is:

1. Display/Variable 163;
2. and each record starts with a line number (followed by a space);

3. the last record is hex FFFF — CHR\$(255) twice;  
you have a MERGE format file.

Notice that the file does not require any BASIC syntax. You could create a Display 163 file that consists of a grocery list and it will MERGE.

Why is the ability to create a MERGE file so earthshaking? Because now you can use TI-Writer or the Editor/Assembler to write your BASIC programs. You can have all of the features of their editors (Find String, Move, Copy, Include Files, etc.) and still be able to run the program. You can also run a LISTed program (obviously it has to be on a storage device, not a printer). Other uses include being able to run screen dumps from the Terminal Emulator II environment.

Here is the program, called TRANSL:

```
1 CALL CLEAR :: OPEN #1:"DSK
1.TESTR" :: OPEN #2:"DSK1.OU
TR", VARIABLE 163
2 LINPUT #1:L$ :: S=POS(L$, "
",1):: ON ERROR 6 :: N=VAL(
SEG$(L$,1,S))
```

```
3 ON ERROR 5 :: A=INT(N/256)
:: A$=CHR$(N-A6):: PRINT L$
4 PRINT #2:CHR$(A);A$;CHR$(1
31);SEG$(L$,S+1,80);CHR$(0):
: GOTO 2
5 PRINT #2:CHR$(255);CHR$(25
5):: CLOSE #2 :: END
6 ON ERROR 5 :: RETURN 2
```

### HOW TO USE TRANSL

The program expects a standard Display/Variable 80 file. Each line in the program text must begin with a line number. Error trapping on lines 2 and 6 will discard any line that has no line number. The program test line numbers do not have to be in order — the MERGE command will put them where they ought to go.

You can modify line 1 to open different files. As the program runs, each line is displayed to the screen. Watch for truncations on a LISTed or downloaded file. When XBASIC returns READY, type the following:

```
NEW
MERGE "DSK1.OUTR" (or whatever
(See Page 31)
```

## 1992 TI FAIRS

### MARCH

**T.I.C.O.F.F. (TI Computer Owners' Fun Faire — The IBM & Clone Owners' Fun Faire)**, 9 a.m.-4 p.m., March 14, Roselle Park High School, Roselle Park, New Jersey, \$5. Contact Robert Guellnitz, Roselle Park Public Schools, 185 West Webster Ave., Roselle Park, NJ 07204, (908) 241-4550 (voice) or (908) 241-8902 (BBS).

### APRIL

**Northeast Computer Fair**, April 4, Waltham High School, Waltham, Massachusetts, sponsored by TI99/4A User Group of the Boston Computer Society. Contact Ron Williams, 14 East St., Avon, MA 02322.

**Dutch Annual TI-Fair**, April 25, Utrecht, The Netherlands, sponsored by Dutch TI-Usergroup. Contact Drs. Erik C. van Wette, Haninkhoek 39, 7546 AD Enschede, The Netherlands, phone: 31-53-778723.

**Ottawa TI Fest**, 10 a.m.-4 p.m., April 25, Merivale High School, 1755 Merivale Rd., Nepean, Ontario, Canada. Contact Ottawa Users Group c/o Bill Gard, 3489 Paul Anka Dr., Ottawa, Ontario, Canada K1V 9K6; (613) 523-9396 (home); (819) 994-8856 (work); (819) 994-8873 (work, attn. DSE 2).

### MAY

**TI Orphan Reunion**, 10 a.m.-5 p.m. May 9, Innisfail Lions' Hall, Innisfail, Alberta, Canada. Contact Fred Kessler, Box 20, Sundre, Alberta, Canada, T0M 1X0, (403) 638-3916.

**TI99/4A Users Group, UK, Annual Meeting**, May 16, Princess Anne Training Centre, 10 Trinity St., Derby (Derbyshire, England). Contact Stephen Shaw, 10 Alstone Rd., Stockport, Cheshire, England SK4 5H.

**Multi User Group Conference**, May 15-16, Ohio State University Lima Campus. Contact Lima 99/4A Users Group, P.O. Box 647, Venedocia, OH 45894 or phone Dave Szippel (419) 228-7109 or Charles Good (419) 667-3131 evenings.

### SEPTEMBER

**State of Washington TI Convention**, Sept. 19, South End Pool Center, 402 E. 56th, Tacoma, Washington. Contact Jim Tomkins, (206) 756-0934.

### OCTOBER

**7th Internationale TI-Computer-Treffen**, Oct. 9-11, Wiesbaden, Germany. Contact Horst Wiese, Eleonorenstr. 6, DW-6200, Wiesbaden, Germany. Please enclose International Reply Coupons (can be bought at U.S. Post Office).

**Chicago International World Faire**, Oct. 30-31, Elk Grove Holiday Inn, Elk Grove Village, Illinois. Contact Chicago Users Group, c/o Hal Shanafield Jr., 2515 Marcy Lane, Evanston, IL 60201-1111, or (708) 864-8644.

### NOVEMBER

**Milwaukee TI Faire**, Nov. 1. Contact Gene Hitz, Milwaukee Area 99/4A Users Group, 4122 North Glenway, Wauwatosa, WI 53222.

**TI-Faire**, Nov. 28-29, Ashfield Boys High School Hall (next to Western Suburbs Leagues Club), Liverpool Road, Ashfield, NSW, Australia. Contact TISHUG (Australia) Limited, P.O. Box 1089, Strawberry Hills, NSW 2012, Australia.

## 1993 TI FAIRS

### FEBRUARY

**Fest West "North" 93**, Feb. 13-14, Howard Johnson Hotel, Salt Lake City, Utah. Contact Fest West "North" 93 Committee, 1396 Lincoln Apt. B, Ogden, UT 84404 or Salt Flats BBS, (308) 394-0064.

This TI event listing is a permanent feature of MICROpendium. User groups and others planning events for TI/Geneve users may send information for inclusion in this standing column. Send information to MICROpendium Fairs, P.O. Box 1343, Round Rock, TX 78680.

# User Notes

(Continued from Page 30)

name you used).

If you run the program now, nothing will happen. Each line is a tail REMark. Edit the program from the top down using FCTN X and FCTN 1. As you delete each exclamation point and cursor down, the XBASIC system retokenizes each line into a RUNable statement. If you get a syntax error, look first for a truncated line. Second, insure that you didn't use word-wrap mode in TI-Writer. A quick check from the XBASIC environment:

```
CALL SCREEN(14) :: FOR A=0 TO 12
:: CALL COLOR(A,16,15) :: NEXT A ::
ACCEPT AT (4,4):AS
```

Don't answer ACCEPT, but rather clear it with FCTN 4. Now list the program. Anything that looks like a red box is probably bad.

If you've a routine in one program, just LIST "DSK1.TESTR": (line numbers of your routine), and run TRANSL against it. Voila! Here's your routine in MERGE format.

## Widget switching

This item, by Paul Heerman, appeared in the newsletter of the Portland Users of Ninety-Nines.

The Widget, or Cartridge Expander, is a device for keeping three cartridges or modules ready for use at the flip of a switch. However, this little jewel has the un-nerving habit of locking up the console when it is switched too fast, and without waiting for a few seconds or so. I have found that by holding the FCTN= key, the quit key, this does not happen while switching the Widget. This seems to act as an interrupt, allowing you to choose a new cartridge and carry on in the new cartridge without having to turn the console off or pressing the reset switch on the Widget.

I have been using this combination for some time and have had only one or two failures. I have even used it with the real touchy SuperCart and have not wiped out the volatile SuperCart RAM.

You must hold down both the FCTN and the = key while switching for this procedure to work. It takes about three thumbs and a couple of fingers, but it works.

# Classified

## Policy

The cost of classified advertising is 25 cents per word. Classified display (i.e., special formatting or graphics) is \$9 per column inch. Classified advertisements must be paid in advance. Classified advertisers may request a category under which they would like their advertisements to appear, but the final placement decision is the responsibility of the publisher.

Classified deadlines will be kept open for as long as practical. For the purpose of classified advertising deadlines, any classified ad received later than the first day of any month cannot be assured of placement in the next edition. We will do our best to include every advertisement that is submitted in the earliest possible edition.

The publisher offers no guarantee that any advertisement will be published in any particular issue. Any damages that result either from errors in copy or for failure to be included in any particular edition will be limited to the amount of the cost of the advertisement itself. The publisher reserves the right to reject any advertisement.

The advertiser may elect to publish the advertisement in subsequent editions at the same charge, payable prior to publication. The deadline for carryover classifieds is the same as for new advertising.

In submitting an ad, please indicate whether you would like a refund if it is not published in the requested edition or whether you would like us to hold it for the next edition. Cancellations and refunds cannot be made after the second day of the month.

Send classified advertising to: MICROpendium, P.O. Box 1343, Round Rock, TX 78680.

## SOFTWARE

### TI-PD PUBLIC DOMAIN AND FAIRWARE

600 DISKS just \$1.50 EACH! And orders for 8 or more disks are postpaid.

Thousands of programs selected from the best from the U.S., Canada, Australia, England, Germany, Holland and Belgium. FAIRWARE IS OFFERED BY AUTHOR'S WRITTEN PERMISSION ONLY. Disks as full as possible, arranged by exact category, BASIC programs converted to XBASIC, assembly programs with XBASIC loader, disks with autoloader by full program name.

Send \$1.00 (deductible from first order) for 20-page catalog listing all programs and authors. Catalog also available on disk.

TIGERCUB SOFTWARE, 156 Collingwood Ave., Whitehall, OH 43213. v9/11

## WANTED

### WANTED

Book "Technical Drive" by Monty Schmidt (1987). Photocopy okay. Merle Vogt, P.O. Box 145, Von Ormy, TX 78073. 9/8

## Buy and sell used computer stuff

National Used Software Club has buyers looking for TI products, as well as sellers. More than 100 TI items are listed for sale. The membership fee is only \$15/year and entitles you to buy or sell computer items via the NUS/HC database. You will also receive FREE

our newsletter (mailed every eight weeks). If you don't buy or sell anything during the term of your membership we will refund your annual fee. For a free, no-obligation information packet, write to NUS/HC, P.O. Box 1343, Round Rock, TX 78680.

### BBS open to non-members

Non-members with modems can access our BBS without joining during the summer. Call 512-255-1557 (5:30 p.m.-8 a.m. weekdays, and from noon Saturday to 8 a.m. Monday weekends. Use 300-1200 baud. Preferred setting is 8N1.

# The ONLY monthly devoted to the TI99/4A

## Subscriptions

- 12 issues, USA, \$25     12 issues, Mexico, \$30.25
- 12 issues, Canada     12 issues, other countries, \$32.50
- surface mail, \$30.00
- 12 issues, other countries, air mail, \$42.00

Outside U.S., pay via postal or international money order or credit card; personal checks from non-U.S. banks will be returned

## Address Changes

Subscribers who move may have the delivery of their most recent issue(s) delayed unless MICROpendium is notified six weeks in advance of address changes. Please include your old address as it appears on your mailing label when making an address change.

Check each item ordered (or list on separate page) and enter total amount here \_\_\_\_\_

Check/MO     (Check one)

Exp. Date \_\_\_\_\_

Card No. \_\_\_\_\_

Minimum credit card order is \$9

Signature \_\_\_\_\_

(required on credit card orders)

No sales tax on magazine subscriptions. Texas residents add 7.75% sales tax on other items, including back copies and disk subscriptions.

Mail to: MICROpendium, P.O. Box 1343, Round Rock, TX 78680

Name \_\_\_\_\_

Address \_\_\_\_\_

City \_\_\_\_\_

State \_\_\_\_\_ ZIP \_\_\_\_\_

The set of numbers on the left of your mailing label indicates the cover date of the last issue on your subscription.

## Disks, etc.

- Back issues, \$2.50 each. (List issues) \_\_\_\_\_

No price breaks on sets of back issues. Free shipping USA. Add 30 cents, single issues to Canada/Mexico. Other foreign shipping 50 cents single issue surface, \$1.60 air mail. Write for foreign shipping on multiple copies.

- 110 Subprograms (Jerry Stern's collection of 110 XB subprograms, 1 disk), \$6.00
- TI-Forth Disks (2 disks, req. 32K, E/A, no docs, \$6.00)
- 1988 updates of TI-Writer, Multiplan & SBUG (2 disks), \$6.00
- Disk of programs from any issue of MICROpendium between April 1988 and the present, \$4.00
- CHECKSUM and CHECK programs from October 1987 issue (must have magazine to use), \$4.00
- MICROpendium Index (2 SSSD disks, 1984-1991, Ext. BASIC req.), \$6.00

- MICROpendium Index II (8 SSSD disks - 1 for each year 1984-1991, XB req.) \$24.00

- MICROpendium Index II with MICROdex 99 (10 SSSD disks, XB req.), \$30.00

- MICROdex 99 (for use with MICROpendium Index II, 2 SSSD disks, XB req.), \$10.00

MICROdex99 by Bill Gaskill is a program to allow users of MP Index II to modify their index entries as well as add entries. MICROdex 99 supports many other functions, including file merging, deletion of purged records, record counting and file browsing.

Magazine holders (12/set — add \$1 shipping/order), \$3

### GENEVE DISKS (SSSD unless specified)

- MDOS .97h (req. SSDD or larger, used with MBASIC), \$4.00
- MDOS 1.14F (req. for MBASIC), \$4.00
- Myarc BASIC 2.99A, \$4.00
- MY-Word VI.21, \$4.00
- Menu 80 (specify floppy or hard disk version(s), SETCOLR, SHOWCOLOR, FIND, XUTILS, REMIND, \$4.00

### GENEVE PUBLIC DOMAIN DISKS

(These disks consist of public domain programs available from bulletin boards. If ordering DSDD specify whether Myarc or CorComp.)
