MAY 1996--Volume 12, #5

RECENT DOWNLOADS FROM THE INTERNET NEWSGROUP COMP.SYS.TI

From: shayter@spar.ca (Steve Hayter) Subject: FTP archive and Website Date: Hed; 20 Her 1976 20:13:13 SHT

ni His, come to my attention that Micropendium has published that I will be putting a TI FTP repository online in the near future. While this is true, I'd like to mention that I've had a delay in obtaining a high speed Internet connection for the project.

I'd also like to explain a little about it, as I've has few small requests for information.

The FTP site is yours to do with what you will. I have SIS of drive space allocated for the TI section (with a additional 2 0.00 in reserve if needed). The only thing ask is that you please not upload copyrighted files without the explicit permission of the holder of that copyright.

The 97/4A website on the same network has been under construction for over a year (the very first website for the 77/4A), and has been accessible intermittently on the network of the link). In addition to cerrying a large variety of info about the 97/4 and 97/4A, it has links to all the other 97/4A pages and FTP sites that are listed in Lycos today. It has a section dedicated to V9T9, the TI emulator by Eddie Guardy and has information on vandors that atil carry equipment for the best 'Home Computer' ever. As with the FTP site, the Neb site is yours. Anything you'd like to see or anything you'd like to publish in regards to our little orphan is encouraged. It will be as good as you make it.

Enough of that. Now, I've had a few questions about access costs. There ere none. It's a tree service, however, I will accept donations as internet access here in Canada is still quits expensive compared to the US. (~8750/mo for 64Kb

Donations:

If you'd care to contribute to the unkeep and coerating costs of the FTP and Web sites, please feel free to sand a check or enney order made payable to 'Nostalgic Communications'. Donations will be acknowledged on a page on the website along with my thanks and the amount donated. (II hardware donations are also accepted)

send an email to me at shayter@sper.ca

#8: Nearly forgot the mailing address:

Steve Hayter c/o Nostalgic Communications 132 Larch, Suite 10 Beaconsfield, Gc Canada H9W 2C2

From willimwap0109.chem.TU-Barlin.DE Wed Mer 27 12:24:54 EST 1996 Bummary: TI99 Parts for male

... speaking of the "more uncommon" stuff :-)
I have the following parts for sale -any serious offer will be considered, buyer pays shipment :

- orig. Machatronics 80-column card (sidecar-type device) fully functional, complete sourcecode of EPROM DSR evailable but without metal case... sorry!
- "Asgard Mouse" for RS232
KDS cartridge (one of the few made)

of there's anybody interested in this stuff, email at: willimzrzsp5.chem.TU-Berlin.DE willimwap0109.chem.TU-Berlin.DE Thanks for listening.

From jim@accelr6.com Wed Mar 27 12:25:40 EBT 1996

Comp.sys.ti FAG Compiled by Jim Reiss (jimr@indra.com) Harch 26, 1996

The following is a set of answers to some frequently asked questions on the comp.sys.ti newsgroup. There is no guarantee that any of these answers are currently valid, or even helpful. If you find an error or omission in this FAG, plbase let me know. Thank you to all those who have suggested changes and additions.

NOTE: If you want something added to the FAG,

the answer as well as the question.

- Western Transfer files between the TI 99/4A?

 1) What is the focus of this newsgroup?

 2) Where can I find TI-8x calculator software?

 3) How can I make a cable to connect my TI-8x to a PC?

 4) What is the Myarc 9640/Senewe?

 5) What are some TI 99/4A FTP sites?

 6) How can I expand my TI T7/4A?

 7) What is Funnelweb?

 8) How can I connect Atari joyeticks to the TI 99/4A?

 9) How can I connect Atari joyeticks to the TI 99/4A?

 10) Is there a TI 99/4A magazine?

 11) Are there TI 99/4A maglators for other computers?

 12) What are the pinouts of the 99/4A connectors?

 13) How about adding this to the FAG?

 14) What is the SuperAMS, and how do I get my hands on one?

I) What is the focus of this newsgroup?

Ine compleys.ii impreyed for discussion of computers sade by Texas Instruments. The bulk of the discussion tends to revolve around the TI 99/4A, a remarkable home computer which was discontinued in 1983 due to the cutthroat nature of the home computer market at that time.

2) Where can I find TI-8x calculator software?
There is an anonymous FTP site at archive.ppp.ti.com which maintains a collection of software for TI's graphing calculators in the /pub/graph-ti directory. It has been reported that ftp.internic.net also has these files. The bit.listserv.graph-ti and bit.listserv.calc-ti newsgroups contain useful files as well.

3) How can I make a cable to connect my TI-Bx to a PC?

I have been told that there are schematics available on the Horld Wide Wab at "http://www.algonet.se/~mha/ti.html". If you decide you would like to buy one, it is apparently carried by Educalc (800-633-2252) and Advantage Marketing (800-937-9777), as well as some other dealers whose names you can get by calling 800-TI-GRRES. The prices from dealers are supposed to be better than buying direct from TI.

4) What is the Myarc 9640/Seneve?
A few years after TI dropped the 99/4A, a third party emphisor of 90/4A peripherals (Myarc) rompleted a desion for replacement computer which had many enhancements over the 97/4A. This machine was originally to be called the "Myarc 9640 Femily Computer", but Myarc suddenly decided to use the name "Geneve" which is not universally liked. The computer is a card for the 99/4A Peripheral Expansion Box which replaces the interface card used to connect to a 99/4A console.

In its standard configuration, the 9640 is 3-5 times the speed of a 99/4A and comes with 512K of CPU RAM, 128K of video RAM, a battery-backed clock chip, Joystick and mouse ports, and an IBM PC/XT keyboard. The video processor provides significantly batter draphics. as well as 80 column text display, with an enalog RBB (not VSA) monitor. The native operating system is an MS-DDS clone called MDDS, and 99/4A acftware is run with an emulation utility called the "SPL Environment". In sither MDDS or GPL, some of the system RAM can be used for print spooling and/or a RAMdisk.

There are some is TY/40 FTF bitme?
There aren't many. One is at solutions.solon.com (the /pub/ti99 directory). Another is at ftp.io.org (the /pub/users/openit directory). Browse each, it's likely that one will have some things the other doesn't.

A) How can I expand my TI 99/407
In all morts of ways. The 99/40 console is fairly limited in what it can do, but with a Peripheral Expansion Box (PE Box or PEB for short), you can easily add a serial/parallel interface, a floppy disk controller, and 32K of memory expansion. This is probably the minimum you want if you plan on making serious use of your 99/40.

You can also add an MFM or SC9I hard disk, a RAMdisk card, a clock card, an 80 column/advanced graphics card, an ISM PC keyboard, a 5RAM device (allows loading of cartridges from disk), and the list goes on and on. There are many options for those who want to push their 99/4As to the limit.

7) What is Funnelwed? Funnelwed is a descendant of the TI-Writer word processor, but has gone far beyond it. Funnelweb provides a senu-driven environment into which you can integrate all sorts of software. Among the many features of the environment is the ability to catalog a disk without loading a disk manager, the ability to run all morts of machine language programs with the Extended BABIC cartridge plugged in, and bundled utilities like a disk editor and a disk manager. There are word processing and programming versions of the editor portion, and there is support for 80 column cards. There's far more to say about Funnelweb than is appropriate for a FAG, but hopefully this will be snough of an overview to give some idea. 7) What is Funnelwen?

8) How can I connect Atari joysticks to the TI 99/4A? Editor's note: provided by Sam Carey.

(12345)

Bob Sutton adds that another option is to find a pair of non-working TI joysticks and add 9-pin connectors to that cable. Which program above and a decent chammeter should be enough to figure it out. Bob adds that he made his by trial and

9) How can I transfer files between the TI 99/4A and a PC? There are basically two options: PC-Transfer or a serial capie. In eitner case, only text files are typically good candidates to move. Picture files also can be useful when candidates to move. Picture file woved from one system to the other.

PC-Transfer is a program which requires a Myarc or CorCo floppy disk controller. It allows reading and writing floppy disks in the MR-DOS TACK disk format.

Using a serial cable, you staply use a te program on each end, doing an XMODEM (or protocol) transfer. terminal emulation or other supported

10) Is there a TI 99/4A magazine? Yes, HICROpendium has been around for over ten years now, and is still in print. Their address is: Hicropendium PO Box 1343 Round Rock TX 78680

A 12 issue (one year) subscription is \$35 for domestic (U.S.) subscribers.

11) Are there TI-99/4A emulators for other computers? At the time of this writing, are at least two emulators evaluable for MS-DOB PCs. There has been some work on TI emulators for other computers, but no details are available as to the status of those projects.

One of the two DOS products is FC99 from CaDD Electronics. It is a commercial software package which was designed equilate the TI 99/4A as fully as possible. Information is available by e-mail from minw@xyvision.com, or by U.S. mail by writing to: CaDD Electronics

The other is called "V9t9", and is shareware. It was written by a student named Edward Swartz. Dus to legal becales from 71, this emulator was pulled off the market for a while, but a new version is now available on various FTP sites, including:

ftp.io.com:/pub/usr/edswartz/v9t9 ftp.uni-erlangen.ds:/pub/pc/msdos/emulator/ti994a ftp.wustl.sdu:/pub/msdos.uplosds/emulators/ti994a solutions.sulon.com:/pub/ti99/dos-windows

v9t9 author's s-mail address swartza@ralph.txswu.adu.

What are the pinouts of the 99/4A connectors? This information is too langthy to include in a FAG, but Thismry Monapited (nouspikeEcmu.unigs.ch) bas a book file with this sort of information and has volunteered to set of its content of the content to interested parties.

13) How about adding this to the FAG?

If you think something should be in the FAG, feel free to let me know. Please note, however, that this FAG is incended to provide helpful pointers, not detailed information. Listing all of the TI user groups would be an example of something that would be far too big to include in FAG.

14) What is the SuperAMS, and how do I get my hands on one? SuperAMS is an expanded meaning system for the YT 99/40 MM. It does not work with the Hyarc computer or the old 99/4. The SuperAMS replaces the 32K card, and uses 4K banks of RAM in that memory space. The SuperAMS card works very differently than a RAMGisk card, it is designed to work as a pure memory expansion card rather than as a device for storing files. A macro assembler and a version of the small compiler "C77" can be used to write programs which use this memory. The card is being sold by the SM99ers User

Scoup in Tucson, Arizona. For more information, send e-mail to David Ormand (diormandaccogate.mac.com) or mike Doane Lu David Ormand (diprmend&cogate.nec.com; or Mike Doane (mdoanespproject.com). Technical information is available from the designer, Jim Krych (ab453@cleveland.freenet.edu). If none of these e-meil addresses work, contact Tom Mile (twills@TheRiver.com). You can also contact the group in the evening via phone (Jack or BJ Mathis - D20-474-5046, Mike Doane - 320-278-3835) or via U.S. Mail at:

Southwest Ninety Niners User Group P.O. Box 17831 Tucson, AZ 85731-7831 Attn: AMS Card **DONE**

From Dave.Nistersädtc.fingerhut.com Tue Apr 2 08:14:03 EST 1995

I haven't posted any updates for a while, so I just thought I'd let you all know what's happening.

The SCSI DBR for the TI was oficially released at Fest Nest in February. Since then, we have received no negative feedback from anyone who bought a SCSI card.

There have been some minor bugs reported and the TI SCSI development team (me and my dog, Blossom) have fixed them as quickly se they are reported.

New EPROMs with all bugfixes will be shipped to all curre SCBI card owners shortly. Also, new EPROMs will available at the Dhio fair for anyone who wants to trade their older ones. Complete SCBI cards will also be for sa

What is happening at the BCSI development labs you lask? Between now and the Ohio show. I plan on doing more quality assurance testing to make sure the DSR is stable. I'd like to thank everyone who purchased SCSI cards with the marly version of the DBR. By getting some cards out there, we are able to find bugs we never would have found in the lab.

After the Ohio fair, we're going to let the market determine what will be next for SC8I. There are so many possibilities. Things being considered include —

o Support for hard drives larger than 248MB o rloopy disk support o CD ROM support o Interface to TI BABIC via CALL xxx

and any other ideas user may have.

Dave. Nieters@dtc.fingerhut.com

From lucid@indy.nmt Tue Apr 2 08:14:29 EST 1996

As a sympo of a S&T BBS, I want to say that as far as I am concern the O&T DDO package is head and heels above what is available .for the TI/Geneve computers. S&T BBS performs very reliably and the tech support from a Tim Tesch has always been more than adequate... *well done* Tim!!!

HUG (Hoosier User's Group) uses all the features of S&T bbs, except for game area. There are multiple message bases, remote sysop functions, multiple transfer areas, and seatifat allows attaching files (files that get deleted when email is deleted). You must remember, the limited programing memory and the limited hardware aspects of the end user that puts a bbs online with less than a ibe clone.

From by047@torfree.net Tue Apr 2 08:15:10 EST 1996

The "Best Fest in the West" is what the TI Fest West has been called in years past. Cartainly Fest West 76 was still the best in the west although vendor and user attendance was not what it used to be... The weather for the Fest West 76 could not have been better with temperatures in the aiddle 70's and clear skies. The hotel was nice with the antrance to the fair room opening to an outside garden area with plenty of space all of which made for a pleasant

Many well known faces in the TI community were present at the '! rest west yo! Une such person whom ! have not seen in a while was Ken Gilland of Notung Software. Ken had a new easy to understand and use solitaire game cloned from the windows solitaire game. The game can be used as an add on to the TI Casino or used as a standalone program. Ken also had his usual assurtment of software including a book called "Mow to use Printers Apprentice and not so insane". Ken also demonstrated his Internet MEB page where many of Ken's paintings can be viewed as well as the MEB page contains a listing of what he offers for the TI79/4a... The Internet address of Ken's page is:

http://ourworld.compumerve.com/homepages/notung/

Rodger Merritt and Steve Mehr were present from Comprodine Boftware with a wide assortment of their software at reduced prices! Many of the well know programs that they were selling were hyperterainal, Maxflix, Grampacker and Reminders to name just a few of a long list of software!

NEXT PAGE

A new vendor to the TI community as well as new for Fest West was Richard and Shawn Baron of Red Baron Software. All of the software presented by Red Baron Software. All of the software presented by Red Baron Software is completely new and very reasonably priced? Red Baron software selections include "Our Solar System" (\$10) which displays pictures and statistics on various planets... Also variable on displays pictures and statistics on various planets... Also variable on displays pictures and statistics on various planets... Also variable is allowed to the prince of th

Larry and Carry Hoffman of Texcomp Ltd was present at the avent and while they did not have a large variety of items for sele they were passing out a very impressive and extensive catalog of products that Texcomp sells that Texcomp has a working prototype of a mesory expansion daughter board for the Buper AMS card which will allow for Imb of memory in a T197/4a system! According to Larry Hoffman interest in the daughter board will dictate whether the card will be mass produced.

Kyle Crichton and Jay Norland of Competition Computer had on display their new TI CD-ROM which currently contains 120mb of Public Domain and Character programs obtained from various sources including user group libraries. A subscription to the CD will include updates as more software is added. However, the TI CD ROM can NOT currently be used on the TI since the DSR to control a CD-ROM on the TI is not complete on the SISI card. Thus the CD must be used on a PC system and accessed VIA a TI Emulator or transferred over to a TI or comeve via "null addem cable" and communications software... Kyle mentioned that he is in the process of acquiring some exterisls marketed by Aegard Software and is looking into reproducing the TI manuals on the CD-ROM...

Don D'Neil of Western Horizon Technologies was present selling SCSI cards which now work with the false wave and load programs from a SCSI drive... Don also had upgraded EPROM's for their AT keyboard interface which fixes a problem that exists when the 4a goes into screen save mode and will not come back from it... By the way WHT also preforms repairs on most 99/4a and Seneve squipment.

The Couthwest Ninety Ninera were not only the nost of the TI Fest West 96 but are the producers of the Super ARS card which was available for purchase at the fair. The SW 99'ers also had a variety of software and other items for sale plus the Jim Peterson library was available for anyone to copy on a self service basis! Among those of the BW 99'ers present was 8J Mathis, Jack Mathis. Tom Wille, Mike Dhane, Dichard Baron, Jeans Matthews just to name a few...

Dave Connery of the Chicago TI Users Group had one of the largest assortments of software and equipment at TI Fest West! Gene Bohot and Ed Butcher of the Pomona Valley 99'ers had a near equal amount of equipment including some hard to find items with a Comman Kinacker, myeric expansion system and a Corcomp Expansion System... Earl Raguse of the Orange County Users Group was present salling out their stock of equipment... Jack & Myrna Morkman and Hazel Knight represented the Vast 99 Users Group with a variety of page pro pictures which can be printed on paper and cut out and folded to make dolls. airplanes etc... Other user groups with miscelleneous items include the Gouthern California Computer Group (S.C.C.S.) and the TI North County 99'ers.

While representatives were present from various user groups across the country Barry Harmson from Holland certainly traveled the greatest distance not to mention he won several teams in the nextine:

Last but not least I finally met in person Bill Gaskill who sells a variety of products including Card File v3.1, Check Plus v3.0, Mailing List Manager v1.2 and Microdex 97. However, Bill is most well known for his many TI history articles published in Micropandium and various newsletters around the country. In the seminar that Bill Gaskill put on the manager v1.2 and Microdex around the country. In the seminar that Bill Gaskill put on the manager v1.2 and Microdex around the country. Through the discussion I discovered that TI community arm now and Just generally what is going on in the TI community. Through the discussion I discovered that TI community. Through the discussion I discovered that TI community. The manager of the sound Blaster...). Chris Bobbitt (Asgerd Software) in the Sound Blaster...). Chris Bobbitt (Asgerd Software) in the Manager of the National League of Cities as a Potroubleshooter. I discovered that Dennis Faharity who wrote TI-Artist (ms well as TI-BASE) made around \$30,000 on TI-Artist but did not do very well on TI-BASE... Craig Miller of Miller Graphics (Gram Kracker) is still writing in Ti-Artist but did not do very well on TI-BASE... Craig Miller of Miller Graphics (Gram Kracker) is still writing in Diamond Bar California. Roger Dooley of Tenex is now in the Pc business. Lou Phillips is now a vice pressident with Chasse Manhattan bank in New York... I wonder if they use Geneva's in their bank? I suggested to Bill Gaskill that he write an article on "where they are now" telling where the former TI community front runners are now wo hopefully we will amagement to the former on this issue somatime soon...

I definitely had a great time at TI Fest West 96, I commend

I definitely had a great time at TI Fest West 96, I command Tom Wills, BJ Mathis and many others in the Bouth Mest 97'ers who worked hard to make this event possible. I must say that the event was very well organized and a FREE lunch was even provided for all the fair goest: Finally I had the opportunity at TI Fest West 96 to talk some with Bill

Rackill and find out a little about him... Rill is definitely a T199/4a historian as is evident by the articles that he writes and I was curtious as to how he got started and where he obtains all his information on the TI... Thus I discovered that Bill Gaskill is 46 years old, is married and has a daughter (17) and a son (19). Bill's "real job' is a lieutenent for the police department in Grand Junction, Golorado. Bill maid that his "romance" with the TITY-6 started when he was in college and used a T197/4a. After the class he purchased a Commodore 64 and the quality of the C64's were so bad that the first and second C64 didn't even work out of the box. Then in January 1984 T1 bailed out of the home computer market, JC Penney had a T199/4a for only 49.95 which he purchased. In 1985 Bill had his first Ad in dicropendius where he sold copies of Personal Auditor not to mantion it was also listed in Tensa's catalog. Then he started joining verious TI user groups across the country Joining around 10 groups. In researching the history of the started joining verious TI user groups across the country Price former owner of Texcomp as well as Stave Mahr of Comprodice Cortware. It seems that in obtaining all this information he wrote a great deal of information and many phone calls... Bill says that his besement is one third full of just T199/4a stuff! Bill said that his "very inquisitive nature" is how he has obtained so much information. I asked Bill why he is still involved with the T197/4a and his enswer was "it's the people who keep me involved" and "the reason we come to the fests and fairs is to see the people and to sell back to them what we bought the year before"! I asked Bill as to if he will ever give up the T199/4a and he said "as long as there is another 99er involved I will be" and I think that holds true for many of us dedicated T199'ers!

I would like to end by saying that I too stick with the TI99/4s not only because it was my first computer and it is certainly a classic but it is the people in the II community that keep it together and make it fun. Please support the vandors, the people, the user groups, the fairs and keep our community alive. Most of all support Micropendium magazing who continues to support us as without them we would have no TI community!

Remember other TI fair's coming up is the Multi Users Broup Conference in Claveland, Ohio on May 25th and the Chicago TI Faire November 7th in Evenston, Illinois'

I soon as I finish it <grin>, though I'll probably release CABINU SULITAIRE, 5 CARD STUD and maybe PAISON POKER, as stand-alone and ADD-ON modules at Fest-West for thome who can't wait for the final package. I haven't decided on a final cost for CABINO Version 4.0, but I will sell it at a reduced cost to those who buy the ADD-ON modules prior to release.

WHAT'S NEW by Sary W. Cox

Bulleve it or not a lot is going on in the TI world lately...

Texcomp is currently having a sale, TI PEB with flex cable interface in original TI packing for only 935 each. Texcomp is also selling Super AMS memory cards. The Super AMS memory cards. The Super AMS memory expansion card breaks the 32k barrier allowing for very large E/A programs to multiple XB programs using the included XB packer. The number of XB programs loadable at one time depends on the memory option ordered... 128k version is 885, 236k version (recommended) is \$100 plus \$5 shipping. Texcomp is also selling "Magic Memory" is described as bringing what the average user needs right into one handy sartidge. With features like dish manager functions that rival DM1000 and editor assembler loader functions. IT also offers the advanced user, easy access to many programs that are used regularly like memory amager, edvanced sector editor, debugger and editor/assembler. Price is \$49.95. Check out TexComp's add in the November 1995 Micropendium for more details or context TexComp at 1-800-846-3474 or write 425 E. Arrow hwy. 8732, Glendora, CA 71740. Sened \$2.50 for a 30 page catalog!

Competition Computer of 350 Marcella May, Millbrae, CA 94030, 1-800- 471-1600 has quite a collection of hard to find cartridges including a funware cartridge called Schnoz-ola as well as other funware cartridges like St. Nick, Video Vegas, Ambulance, Driving Demon, Hen House and Rabbit Trail. Furthermore they have a variety of Navarone and R.S. Software cartridges. Call for a free TI Buyers Suide. Competition Computer is also the company producing the public domain and sharewere programs for the TI on a CD-BMM. the public CD-ROM.

Me currently have a demo copy of TERM 80 in our library which is a new terminal program for the TI99/4a which allows an 80 column screen on a TI99/4a without having to have an 80 column card! However, you can order the full version for 915 from Jeff Brown, 2111 Montreal Rd, \$102, 6loucester, Ont. Canada KiJ 8M8; (613) 746-1013; email bb7378freenet.carleton.ca

Vern Jensen (author of TI Games The Castle and Maze Mania) has announced the release of Virus Attack based on a hit Nintendo game. The game is described as having great graphics, sound effects and music! The program which has been in development now for Z years is now evailable an requires XB or E/A, and a 85/80 drive and 32k memory. The program sells for \$15 plus \$2 shipping from Vern L. Jensen, \$10 Linda Vista Ave., Pasadena, CA 91103.

Other new items is TI BAR CODE to produce bar codes for letters for routing at the post office, available from Cecure Electronics. Work on PC99 TI Emulator for PC's continue to be underway by Mike Wright. A new card for the PEB from Germany speeds up the 4s up to 6 times it's present appeal. Bruce Harrison continues to release all sorts of grograms and his programming tutorials series in Micropendium has been great! A lot of new items are being developed everses including many items debuing at a recent TI faire in Germany. At this event a professional stock

market analysis program was demonstrated for the TI97/4a. A teletext package for the TI and Seneve was show where when this system is hooked to a satellite receiver, cable system or broadcast station where information from a teletext service can be captured... Furthermore many new programs were released such as MYMENU2+, MYBABE, DDI-ICON, TIPSPAINT, SRABBER AND PXL5RABBER... Work on the SCSI card for the 4a and Seneve continue as updated EPROM's add additional features...

By the way Bruce Harrison has released three disks full of Christmas ausic for the TI99/4a (NOT Seneve compatible) Ten pieces on 3 88/8D disks which run in E/A or Extended BABIC. Price is 84 per disk or all three for \$10, definitely a bargan! Send check or money order to Bruce Harrison, 5705 40th Place, Hyattsville, MD 20781.

This just tops the surface on what all is available now days... To keep up with the latest subscribe to Micropendium angazine! Cost is \$35 a year (U.S.A.) and I also recommend subscribing to their monthly disk full of programs in the angazine (so you do not have to type it in) as well as it contains additional programs not printed in Micropendium! Write to Micropendium at P.O. Box 1343, Round Rock, TX 78680 or internet EMAIL; jkoloen@io.com, Genie; J.Koloen or call (512) 255-1512.

TELETEXT CARD

The Teletext-Card is a new hardware project for the TITPY/AA and for the Seneve. The card is an extern device which is connected to the R8232 interface. On the other side you need a CVBS signal from a TV or something else. I use a satellite receiver. The software is written mostly in CTP and in assembly language. This software controls the decoder chip (SAAD246A/PE) via the R8232. The software needs 32k seercy, a Diskdrive and a program file loader like the Editor/Assembler Modul or the Horizon menu.

The card is controlled by a user friendly menu program with the

- following options:

 searching four pages at the same time

 dump pages with graphics to printer

 save them to any other device you like in DISPLAY VAR SO format

 show the status of memory

 show moving index, date, time, channel

 find subpages

 if you have an SO column card you can store 176 pages in memory

- vino suppayes if you have an 80 column card you can store 176 pages in semory automode function:

- automode function:
 the program searches the pages alone
 move pages during the searching process
 see two page equally on screen
 if the Ti speech synthesizer is adapted the computer
 gives you advices
 use other language characters: german, french, spanish etc.

32k Memory

and of course the TeletextCard

further supported are: 80 column cards: Becker, Mechatronic, TIm, EGI, GENEVE TI speech synthesizer

if you are interested please feel from to write to the following advess: ABITS and Partner Hauptstr.: 44 67517 Sorxheimertal

Robert D. Silpin <rdg@po.CWRU.Edu> writes: >Is nort out of the Beta stage for the Geneve?
>Is sent in the \$5.00 awile ago but haven't received it yet.
>Thanks.

Robert,
Port is still in the beta stage. The preliminary version of
Port was released to the public at the end of December '95.
You state that you sent in 45.00 a while ago -- where did
you send this money?? If you sent it to my address than I can only assume it is lost in the mail. My address is as
follows:

1856 Dixie Road Port Washington, WI 53074

If you did not send it to me, where did you send it? **DONE**

Organisation des TI / GENEVE Treffen

Datei: TI=MEETING

Hello TI-friends, hallo GENEVE-freaks !

IT IS TIME NOW to send the FIRST information for the

11. Internationalen
TEXAS INSTRUMENTS 99/4a and MYARC GENEVE 9640
from 20. - 22. September 1996 in Wolfsburg / Germany

out. So if you are in Europe in this time and you are a real TI-friend I think there is no problem to make a weekend stop in Wolfsburg (the hometown of Volkswagen). We make the meeting this year at:

Freizeitheim Vorsfelde Am Sportplatz 5 D-38448 Wolfsburg - Vorsfelde

Germany

The mainly fair is on Saturday, 21st of September 1996. But in the last years shown that many TI-user are interested to stay a little bit longer at the meeting place to compute or to make small excursions in the city of the meeting place.

In this year we organize a visit of the VOLKSWAGEN car-factury at friday (20th. Sep) and a small tour to the german-german boundary which divide Germany for a long time in to parts (on 21st Sep). But the main reason for the meeting is to get news and change informations around the TI and GENEVE computer systems.

If you are like to stay longer in the area, the are Hamburg (greatest european port and 'Reeperbahn'), Hannover (city of the EXPO 2000) and Berlin (may be you know it form the 'wall') within daytrip distance.

If you are like to visit the lith international !! meeting please contact one of the adresses below in the text. We will do our best to make you an enjoyable weekend-stay in Wolfsburg.

The prices for a hotel night in Wolfsburg are between 40 DM (low level) up to 200 DM (de luxe) for a one night stay in a single room.

Please contact us as soon you were sure that you visit our meeting, so we will organize the rest for you.

Flease contact only one of the two TI-MEETING-CONTACT adresses to express your which to visit the 11.th International TI / GENEVE meeting in Wolfsburg. Send the following reservation form !

Martrin Zeddies
Hauptstrasse 26
D-38446 Wolfsburg

Burghard Knedel
Bresauler Strasse 2
D-38550 Isenb}ttel

Germany
