Changes and Fixes

1.1 Fixes a the display so it doesn't have to refresh the image every time. adds printing function.

2.0 Addes features like print, auto as well as manual mode for slideshow.   zoom in/out plus other special effects.

2.1 Fixes a problem if you press the pause key when the slide show is over in auto mode. now the slideshow automode continously shows from start to end and loops again and again until you press pause. shrunk the 'loading window'. included a setup program.

2.2 Fixes problem in slideshow. when picutre number 1 was deleted, you would get an error when going to the next.

2.3 Fixes some centering problems. it's now not necessary to adjust the window or the image most of the time.   this is now done automatically. when doing File Open it goes to the current directory instead of the root directory. top buttons don't scroll off when scrolling.

2.4 Fixes image sizing problems and an error when using the auto-mode.

2.5 Added installation program, changed web and e-mail address, had access violation error when doing auto slideshow after manual, set default auto slideshow time to 5 seconds.

2.6 Added credit card registration information

3.0 Completely redesigned the look, move controls to floating toolbar, more acurately centers, Win95 type directory browser, Explorer type control buttons, associates image file types with PicVu so when you click on an image it automatically loads the image with with PicVu, prints image closer to actual size on screen, remembers last file browse path.

4.0 Complete redesigned look again by not using a front form to show the image - there were too many problems with this. Fixed resizing problems.

4.1 Fix problem with some tall pictures where it cuts off the bottom of the picture, new image would sometimes get distorted - sometimes clicking on it would clear it up, now fixed.

Contents

Directions

BlackBoard PicVu is a unique picture viewer/slideshow utility.   It has features that others lack.
To view an image :
Click FILE, OPEN and double-left click on the image file
or
In Windows Explorer just double-left click on the .jpg, .gif, .png, .bmp file (Note this only works AFTER the program has ben run the first time)

To view multiple images :
Click FILE, SLIDESHOW, highlight the files you'd like to view with the left mouse button. Your selection shows up on the right window.   Now you can either manually advance forward or backwards by clicking MANUAL OR have PicVu automatically advance every so many seconds (which you set).   Click AUTO for this mode. To pause or stop while in auto mode click PAUSE.   To start again click PLAY.   To manually advance forward to the next picture click NEXT.   To manually go the previous image click PREVIOUS. These buttons are on a seperate floating bar so you can scroll the image and still have access to the control bar.

General:
One of the nice features about PicVu is that you can do anything such as move, rename, delete, or wipe delete while in manual or auto slideshow mode.   These options can be accessed from the FILE menu.
To view information about an image click IMAGE, INFO.
You can view the image in different ways such as flip, rotate, zoom in and out, and reset back to normal.   These functions can be accessed from the IMAGE menu.

Other image programs might change PicVu's associate with the image file types.   To re-associate image file types such as .jpg, .gif, .png, and .bmp with PicVu just click FILE, ASSOCIATE FILE TYPE.

Features

Easy to view multiple image types such as .jpg, .gif, .bmp, and .png by clicking on the file in Windows Explorer, FILE OPEN, or slideshow mode.
Special effects such as flip, rotate, zoom in and out.
Options such as delete, wipe delete, rename, print, and move even while in slideshow mode.
Remembers last file browse path.
Slideshow mode works by going forward or reverse and when it auto mode continuously displays (when it gets to the end it starts at the first image again).
