History:

This program was release to the public for the first time on 3-10-97 as DateCalc version 1997.1. Since then the following revisions have been added:

4-20-98 Version 1998.1 released. The product was renamed to Date/Time Calculator '98 with the following new features.

1. Date/Time Calculator '98 is a native Windows 95 application. Windows 3.x is no longer supported in this version.
2. Both date difference and date add/subtract calculations are displayed on single page.
3. The interface has been updated to include a 3D look and feel.
3. The nag screen does not appear until after the 30 day trial period has expired. The software remains functional and is still not crippled.
4. Date difference now supports both date and time calculations. The prior version did not support any time calculations.
5. Date difference includes a countdown and countup features (including preset year 2000 countdown).
6. The countdown feature includes an optional alarm.
7. Date addition/subtraction may now be increased/decreased by years, months, weeks, days, weekdays, hours, minutes or seconds.
8. The resultant date in date addition/subtraction is displayed on a calendar format.
9. The program now includes International date support.
10. The Windows 95 date format is automatically read and applied to dates displayed and input formats.
11. Date formats may be optionally reconfigured.
12. The first day of week on all calendars are reconfigurable to Sunday or Monday.
13. The applications form position and size is automatically stored on exit and restored on startup.
14. The form position may be optionally reset to its original position and size.
