Date/Time Calculator '98

Program Description

No Year 2000 Bug here! Date/Time Calculator '98 performs various calculations on dates ranging from January 1, 1600 to December 31, 3999. Functions include date/time difference which calculates the years, months, weeks, days, hours, minutes and seconds between two points in time. As an option, one of the dates may be the current date and time with seconds ticking. The result is a real time or countdown to a future date or a real time countup from a past date. A realtime countdown to the year 2000 is an optional menu item. The countdown feature also includes an optional audio alarm.

The calculator's second main function is date/time addition and subtraction. Select any date/time and add or subtract years, months, days, weekdays, hours, minutes or seconds. The resultant date/time is displayed instantly in along with that months calendar. Date/Time Calculator '98 supports international dates either by reading the current windows configuration or manually selecting the desired date format.

RequiresWindows 95. Shareware $19.95.
