Creating a New Peak Document

The first step in beginning a new project is creating a new Peak audio document. Peak allows you to have multiple audio documents open at the same time.

To create a new audio document:

<u>1. Choose New from the File menu. This command provides a hierarchical menu which allows you to choose either a mono or stereo format for the new document.</u>

<u>2. Choose the desired format, mono or stereo. When a new empty window appears, you are ready to begin your project.</u>

If you press c -N to create a new document when the Clipboard contains audio which has been cut or copied, Peak will anticipate your needs and create a new audio document that matches the format (stereo or mono) of the audio on the clipboard.
