

LustRazor Killer Icons

Description: Icons in this set are compatible with Mac OS 8.5 to Mac OS X and have the large 128x128 thumbnail images. The goal was to make something that looks better than cool —KILLER! I hope you get a kick out of them, because I really enjoyed making them.

This icon set was made from an unfinished Mac OS 8.5 set that I had sitting around from last summer and were made for submission in the Pixelpalooza 2001 contest. The OS X format allows a lot greater artistic freedom, and I hope to make more soon.

Software Used: Adobe Photoshop with IconBuilder Pro v2.0 Plugin
