Advanced Web Ranking 4.7.1 *trial*
Caphyon LLC, support@advancedwebranking.com,
http://www.caphyon.com
Requirements: Mac OS 10.2 or later
Advanced Web Ranking is a tool that helps check your Web site position on all major search engines, able to query over 700 search engines and quickly find out if you're moving up or down in the rankings, or if your site is listed at all. It will track the progress of your rankings over time and display that information in easy-to-read-and-understand graphical and tabular reports. It can help you check not just the position of your Web site, but also the position of your competitors' Web sites.

Bonjour Browser 1.5.6 *freeware*
TildeSoft, info@tildesoft.com, http://www.tildesoft.com
Requirements: Mac OS 10.4 or later
Bonjour Browser is an application that lets you browse all the Bonjour services available on your local network. This application will show you all the known Bonjour services available and what computers have them, along with any extra information given with the service. It comes complete with a list of known services and also lets you add your own.

Chicken of the VNC 2.0b4 *freeware*
SourceForge, http://sourceforge.net/projects/cotvnc
Requirements: Mac OS 10.3 or later
Chicken of the VNC is a VNC client for Mac OS X. A VNC client allows you to display and interact with a remote computer screen. In other words, you can use Chicken of the VNC to interact with a remote computer as if it were right next to you.

GarageSale 2.4.4 *trial*
Iwascoding, ilja@iwascoding.com, http://www.iwascoding.com
Requirements: Mac OS 10.3.9 or later
GarageSale lets you create eBay auctions using an intuitive and Mac-like interface. It features a WYSIWYG description editor and imports photos directly from iPhoto, a digital camera, or an iSight. GarageSale supports advanced eBay features such as item attributes, and automatically uploads auction images to a Web server via FTP, WebDAV, or a .Mac account. More than 50 free listing designs are included with GarageSale.

KeyCamX 2.1.1 *trial*
KeyWebX, support@keywebx.com, http://www.keywebx.com
Requirements: Mac OS 10.3 or later, FireWIre or USB camera
KeyCamX is easy to use webcam software for Intel and PowerPC Macs. You can use it just for fun or for serious applications including protection of your property. Combining different features of KeyCamX you can create a sophisticated setup of webcam and networked image storage with Web access that is difficult to build with other software in the same price range.

Launch2net 1.3.9 *demo*
Nova Media, fuellemann@novamedia.de, http://www.novamedia.de
Requirements: Mac OS 10.3.9 or later
launch2net supports many mobile devices used by mobile network carriers worldwide. The software supports high-speed HSDPA and 3G UMTS connections as well as standard EDGE and GPRS protocols.

MacStumbler 0.75b *freeware*
MacStumbler, http://www.macstumbler.com
Requirements: Mac OS 10.1 or later, AirPort card
MacStumbler is a utility to display information about nearby 802.11b and 802.11g wireless access points. It's mainly designed to be a tool to help find access points while traveling, or to diagnose wireless network problems. Additionally, MacStumbler can be used for "wardriving," which involves coordinating with a GPS unit while traveling around to help produce a map of all access points in a given area.

MailTags 1.2.2 *shareware*
Indev, http://www.indev.ca
Requirements: Mac OS 10.4 or later
MailTags lets you add keywords, projects, priorities, due dates, and notes to your email in Apple's Mail.

MuchoThumbs Pro 3.3 Beta *beta*
MuchoSoft Inc, http://www.muchosoft.com
Requirements: Mac OS 10.3 or later
MuchoThumbs is an application designed to create thumbnail-based Web sites extremely rapidly, with all related parts: thumbnails, Web pages, banners, and more. MuchoThumbs is specifically written to produce thumbnail-based Web pages and all linked pages, starting from an images folder. MuchoThumbs is fully customizable and will create your Web pages the way you want and with the feel you want.

MuchoThumbs includes useful tools to use with your images, such as adding a copyright or resizing them easily.

OmniWeb 5.1.3 *trial*
The Omni Group, info@omnigroup.com, http://www.omnigroup.com
Requirements: Mac OS 10.2.8 or later
OmniWeb is a fully featured, great-looking native Web browser for Mac OS X. Highly multithreaded and written using Apple's advanced Cocoa framework, OmniWeb also obstructs pop-up ads, searches by keyword through your history, updates your bookmarks, and checks the spelling in your Web forms.

Pando 0.9.0.4 *beta*
Pando, http://www.pando.com
Requirements: Mac OS 10.3.9 or later
Although email has been the standard for years for sending files, it was not designed to handle attachments any larger than about 8MB. And while YouTube has emerged as a quasi-alternative for sharing video with friends and family, it's not private at all. So for independent filmmakers looking for a way to share works-in-progress with fellow team members, or new parent who want to send home movies of their newborns to grandma, there's another solution: Pando.

PC-Mac-Net FileShare Lite 6.1.4 *freeware*
Lava Software, http://www.lavasoftware.com, service@lavasoftware.com,
Requirements: Mac OS 10.2 or later
PC-Mac-Net FileShare Lite is the free version of the popular PC-Mac-Net FileShare, a fast and efficient file-sharing, data-backup and remote media-player product. New backup features provide simple and secure file backup through a unique mixture of data encryption, multidestination storage of backup data on networked computers, and encryption-key recovery. Typical applications include home and office file backups, automatic daily backups of laptops to a home server when you return home, and secure remote backup of laptops via Wi-Fi when on the road.

RSSReplay 1.1 *trial*
RNSoft, http://www.rnsoft.com
Requirements: Mac OS X, Dreamweaver MX or later
Republish RSS feeds on your Web page layouts from Dreamweaver MX, MX2004, or Dreamweaver Version 8.

Sandvox 1.0.4 *trial*

Karelia Software, http://www.karelia.com
Requirements: Mac OS 10.4 or later
Sandvox makes Web site-creation elegant, intuitive, and fun. It follows
the Macintosh Way -- the way it should be: Drag and drop content,
watch your site take shape as you create it, and then publish.

SiteTagger 3.1.1 *demo*
From Concentrate Software, info@fromconcentratesoftware,
http://www.fromconcentratesoftware.com
Requirements: Mac OS 10.4 or later
SiteTagger is a tag-based bookmark manager that sports integration
with the most popular Mac OS X Web browsers (including importing
and exporting bookmarks), using OS X technologies including
AppleScript and Spotlight, plus powerful bookmark organization
options. It has a handy menu bar item so that bookmarks can be
easily accessed, and includes a "bookmarklet" so that bookmarks can
be easily added from any JavaScript-enabled Web browser.

SpamSweep 1.4.1 *shareware*
Bains Software, http://www.bainsware.com
Requirements: Mac OS 10.3 or later
SpamSweep is an advanced Bayesian spam filter with a simple, easy-
to-understand interface. SpamSweep seamlessly combines many
filtering technologies including domain and relay blacklists, sender
whitelisting, and a Bayesian filter that automatically deletes spam
messages before they're downloaded by your email client.

Style Master 4.5.1 *demo*
Westciv, http://www.westciv.com
Requirements: Mac OS 10.3 or later
Style Master has all the tools you need to design, build, code,
troubleshoot, and learn standards-based Web design using cascading
style sheets.

Transmit 3.5.4 *trial*
Panic, info@panic.com, http://www.panic.com
Requirements: Mac OS 10.3.9 or later
File Transfer Protocol (FTP to you and me) is rarely fun -- and even if
you're using it to download world-class smut, FTP client apps are far
from sexy. Then along came Transmit; this FTP client is extremely user
friendly and versatile, and extremely Mac OS savvy, with such features
as column view, drag-and-drop, Automator and Spotlight support,
iDisc and .Mac features, and even a Transmit widget for FTPing by the
Dashboard lights. Or something like that.

TubeSock 1.0.1 *demo*
Stinkbot, http://www.stinkbot.com
Requirements: Mac OS 10.3.9 or later
TubeSock grabs YouTube videos from the Web and copies them to your video iPod, Mac, or PlayStation Portable. TubeSock knows how to convert the video using the codecs and bit rates that are best for each device. It can even add the video to iTunes for you.
