BetterZip Version 1.2

Copyright (C) 2006 Robert Rezabek
All Rights Reserved

Overview

BetterZip lets you create, view, modify, and extract compressed archives.

It currently supports archives with these file extensions: zip, gz, bz, bz2, tar, tgz, tbz, rar, 7-zip, and cpio. More formats will follow soon.

You can drag files or folders into archives or drag them out into Finder for extraction. No need to create or extract complete folders.
BetterZip lets you create archives that contain all the Mac specific stuff like Finder settings and resource forks as well as clean archives that are fit for exchanging data with Windows or Unix systems. You can change that mode at any time and quickly clean existing archives.

Installation

Drag the BetterZip icon from the mounted disk image to your Applications folder (or wherever you wish to install it).

Requirements

BetterZip requires at least Mac OS X 10.4 (Tiger).
