Let the distance in inches from the left edge of the page to the vertical line be H , and from the bottom edge to the horizontal line be V ; let the lengths of the gaps at the top and bottom of the vertical line be $T$ and $B$ respectively, and the gaps at the left and right of the horizontal line be L and R. For correct alignment of pages, put the following line in a file named (for example) margins.ps, and then mention margins.ps on the gs command line when printing any of your own files:
<</.HWMargins [ml mb mr mt]/Margins [x y] >> setpagedevice
where

$$
\mathrm{ml}=\mathrm{L}^{*} 72, \mathrm{mb}=\mathrm{B}^{*} 72, \mathrm{mr}=\mathrm{R}^{*} 72, \mathrm{mt}=\mathrm{T}^{*} 72,
$$
