

CD Blaster 1.0

Install Notes

To install CD Blaster:

Choose Run from the File menu of Program Manager.
Type *r*:\\SETUP, where *r* is the drive letter of your CD-ROM drive.
Press OK.

Although CD Blaster does not require a sound board, it is *strongly recommended* that you get one. Even Setup will sound better with a Windows-compatible sound card installed!

Note:

CD Blaster must be installed from within Windows 3.1 (or compatible operating environment). Setup cannot be run from the DOS command prompt.

All CD Blaster documentation is on-line. To access help in most CD Blaster applications, simply press F1.

Please refer to the Read Me file (README.WRI on the CD-ROM) for last-minute changes and clarifications.
