Talking Minesweeper

Talking Minesweeper is just like Windows minsweeper with a few nifty differences:
- o   You can find out where the mines are safely
- o   Sounds will let you know when you've goofed

To find out if there's a mine under a certain square:
- o   Hold down the *alt* key on your keyboard.
- o   Click on the square with the *right* mouse button.   You'll hear a sound "don't do that" if there's a mine under the square.
