This is my second Windows/Covox program. It's only slightly less pointless than my last one.. It will make audible key clicks as you type under Windows. It gives three separate sounds, for the return key, the space bar, and for all the other keys. Unfortunatlely, unless you're a two-finger typist, it doesn't come close to keeping up. And it get a bit annoying after a while, (I know I have it on as I write this!)

I set it up for the Internal Speaker, but it was really intended for use with a Covox Speech Thing or Voice Master. To change this, add a "Port" Line to your Win.Ini:

[Covox Speech Digitizer]
Port=0   Voice Master, Port 22Fh
Port=1   Voice Master, Port 24Fh
Port=2   Voice Master, Port 28Fh
Port=3   Voice Master , Port 2CFh
Port=4   Voice Master, LPT1
Port=5   Voice Master, LPT2
Port=6   Voice Master, LPT3
Port=7   SoundMaster
Port=8   The Computer's Internal Speaker

(I choose the Application name, in the hopes that this parameter could be used by many sound applications).

Hopefully, I will soon have a more useful varient of this program. Perhaps making swooshing sounds as windows opens and close.

The sound output routines were from Covox's CVXLIB. The sound fil
es were taken from a MacIntosh.
